I U N $\mathbf{I} \cdot \mathbf{R}$ Y INTO THE NATURE AND CAUSES

A N

OF THE

WEALTH OF NATIONS.

BOOK IV.

Of Systems of political Oeconomy.

INTRODUCTION.

OLITICAL acconomy, confidered as a branch of the science of a statesman or legislator, proposes two distinct objects; first, to provide a plentiful revenue or fublistence for the people, or Introduction. more properly to enable, them to provide fuch a revenue or fubfiftence for themfelves; and fecondly, to fupply the flate or commonwealth with a revenue fufficient for the public fervices. It propofes to enrich both the people and the fovereign.

THE different progress of opulence in different ages and nations, has given occasion to two different fystems of political æconomy, with regard to enriching the people. The one may be called the fystem of commerce, the other that of agriculture. I shall endeavour to explain both as fully and diffinctly as I can, and fhall begin with the fystem of commerce. It is the modern fystem, and is best understood in our own country and in our own times.

B

THE NATURE AND CAUSES OF

CHAP. I.

Of the Principle of the commercial, or mercantile System.

BOOK IV.

HAT wealth confifts in money, or in gold and filver, is a popular notion which naturally arifes from the double function of money, as the inflrument of commerce, and as the meafure of value. In confequence of its being the inftrument of commerce, when we have money we can more readily obtain whatever elfe we have occasion for, than by means of any other commodity. The great affair, we always find, is to get money. When that is obtained, there is no difficulty in making any fublequent purchase. In consequence of its being the measure of value, we effimate that of all other commodities by the quantity of money which they will exchange for. We fay of a rich man that he is worth a great deal, and of a poor man that he is worth very little money. A frugal man, or a man eager to be rich, is faid to love money; and a carelefs, a generous, or a profuse man, is faid to be indifferent about it. To grow rich is to get money; and wealth and money, in fhort, are, in common language, confidered as in every refpect fynonymous.

A RICH country, in the fame manner as a rich man, is fuppoled to be a country abounding in money; and to heap up gold and filver in any country is fuppoled to be the readieft way to enrich it. For fome time after the difcovery of America, the first enquiry of the Spaniards, when they arrived upon any unknown coaft, ufed to be, if there was any gold or filver to be found in the neighbourhood. By the information which they received, they judged whether it was worth while to make a fettlement there, or if the country was worth the conquering. Plano Carpino, a monk 2

fent ambaffador from the king of France to one of the fons of CHAP. the famous Gengis Khan, fays that the Tartars ufed frequently to afk him if there was plenty of fheep and oxen in the kingdom of France. Their enquiry had the fame object with that of the Spaniards. They wanted to know if the country was rich enough to be worth the conquering. Among the Tartars, as among all other nations of fhepherds, who are generally ignorant of the ufe of money, cattle are the inftruments of commerce and the meafures of value. Wealth, therefore, according to them, confifted in cattle, as according to the Spaniards it confifted in gold and filver. Of the two, the Tartar notion, perhaps, was the neareft to the truth.

MR. Locke remarks a diffinction between money and other moveable goods. All other moveable goods, he fays, are of fo confumable a nature that the wealth which confifts in them cannot be much depended on, and a nation which abounds in them one year may, without any exportation, but merely by their own wafte and extravagance, be in great want of them the next. Money, on the contrary, is a fleady friend, which, though it may travel about from hand to hand, yet if it can be kept from going out of the country, is not very liable to be wafted and confumed. Gold and filver, therefore, are, according to him, the moft folid and fubflantial part of the moveable wealth of a nation; and to multiply thofe metals ought, he thinks, upon that account, to be the great object of its political œconomy.

OTHERS admit that if a nation could be feparated from all the world, it would be of no confequence how much, or how little money circulated in it. The confumable goods which were circulated by means of this money, would only be exchanged for a greater or a fmaller number of pieces; but the real wealth or poverty

B 2

of

of the country, they allow, would depend altogether upon the abundance or fcarcity of those confumable goods. But it is otherwife, they think, with countries which have connections with foreign nations, and which are obliged to carry on foreign wars, and to maintain fleets and armies in distant countries. This, they fay, cannot be donc, but by fending abroad money to pay them with; and a nation cannot fend much money abroad, unless it has a good deal at home. Every such nation, therefore, must endeavour in time of peace to accumulate gold and filver, that, when occasion requires, it may have where withal to carry on foreign wars.

IN confequence of these popular notions, all the different nations of Europe have studied, though to little purpose, every possible means of accumulating gold and filver in their respective countries. Spain and Portugal, the proprietors of the principal mines which supply Europe with those metals, have either prohibited their exportation under the severest penalties, or subjected it to a confiderable duty. The like prohibition seems antiently to have made a part of the policy of most other European nations. It is even to be found, where we should least of all expect to find it, in some old Scotch acts of parliament, which forbid under heavy penalties the carrying gold or filver *forth of the kingdom*. The like policy antiently took place both in France and England.

WHEN those countries became commercial, the merchants found this prohibition, upon many occasions, extremely inconvenient. They could frequently buy more advantageously with gold and filver than with any other commodity, the foreign goods which they wanted, either to import into their own, or to carry to fome other foreign country. They remonstrated, therefore, against this prohibition as hurtful to trade.

THEY

BOOK

THEY reprefented, firft, that the exportation of gold and filver in C H A P. order to purchafe foreign goods, did not always diminifh the quantity of thofe metals in the kingdom. That, on the contrary, it might frequently increafe that quantity; becaufe if the confumption of foreign goods was not thereby increafed in the country, thofe goods might be re-exported to foreign countries, and being there fold for a large profit, might bring back much more treafure than was originally fent out to purchafe them. Mr. Mun compares this operation of foreign trade to the feed-time and harveft of agriculture. " If " we only behold," fays he, " the actions of the hufbandman in the " feed-time, when he cafteth away much good corn into the ground, " we fhall account him rather a madman than a hufbandman. But " when we confider his labours in the harveft, which is the end " of his endeavours, we fhall find the worth and plentiful increafe " of his actions."

THEY reprefented, fecondly, that this prohibition could not hinder the exportation of gold and filver, which, on account of the fmallnefs of their bulk in proportion to their value, could eafily be finuggled abroad. That this exportation could only be prevented by a proper attention to, what they called, the balance of trade. That when the country exported to a greater value than it imported, a balance became due to it from foreign nations, which was neceffarily paid to it in gold and filver, and thereby increafed the guantity of those metals in the kingdom. But that when it imported to a greater value than it exported, a contrary balance became due to foreign nations, which was neceffarily paid to them in the fame manner, and thereby diminished that quantity. That in this cafe to prohibit the exportation of those metals could not prevent it, but only, by making it more dangerous, render it more expensive. That the exchange was thereby turned more against the country which owed the balance, than it otherwife might have been; the merchant who purchafed a bill upon the foreign country being obliged

THE NATURE AND CAUSES OF

obliged to pay the banker who fold it, not only for the natural rifk, trouble and expence of fending the money thither, but, for the extraordinary rifk arifing from the prohibition. But that the more the exchange was against any country, the more the balance of trade became neceffarily against it; the money of that country becoming neceffarily of fo much lefs value, in comparison with that of the country to which the balance was due. That if the exchange between England and Holland, for example, was five per cent. against England, it would require a hundred and five ounces of filver in England to purchase a bill for a hundred ounces of filver in Holland: that a hundred and five ounces of filver in England, therefore, would be worth only a hundred ounces of filver in Holland, and would purchase only a proportionable quantity of Dutch goods : but that a hundred ounces of filver in Holland, on the contrary, would be worth a hundred and five ounces in England, and would purchase a proportionable quantity of English goods: That the English goods which were fold to Holland would be fold fo much cheaper; and the Dutch goods which were fold to England, fo much dearer, by the difference of the exchange; that the one would draw fo much lefs Dutch money to England, and the other fo much more English money to Holland, as this difference amounted to: and that the balance of trade, therefore, would neceffarily be fo much more against England, and would require a greater balance of gold and filver to be exported to Holland.

THOSE arguments were partly folid and partly fophiftical. They were folid fo far as they afferted that the exportation of gold and filver in trade might frequently be advantageous to the country. They were folid too in afferting that, no prohibition could prevent their exportation, when private people found any advantage in exporting them. But they were fophiftical in fuppofing, that either to

6

ВООК

to preferve or to augment the quantity of those metals required CHAP. more the attention of government, than to preferve or to augment the quantity of any other useful commodities, which the freedom of trade, without any fuch attention, never fails to fupply in the proper quantity. They were fophiftical too, perhaps, in afferting that the high price of exchange neceffarily increased, what they called, the unfavourable balance of trade, or occafioned the exportation of a greater quantity of gold and filver. That high price, indeed, was extremely difadvantageous to the merchants who had any money to pay in foreign countries. They paid fo much dearer for the bills which their bankers granted them upon those countries. But though the risk arising from the prohibition might occasion fome extraordinary expence to the bankers, it would not neceffarily carry any more money out of the country. Thisexpence would generally be all laid out in the country, in fmuggling the money out of it, and could feldom occasion the exportation of a fingle fix-pence beyond the precife fum drawn for. The high price of exchange too would naturally difpofe the merchants to endeavour to make their exports nearly balance their imports, in order that they might have this high exchange to pay upon as fmall a fum as poffible. The high price of exchange, befides, must necessarily have operated as a tax, in raising the price of foreign goods, and thereby diminishing their confumption. It would tend, therefore, not to increase, but to diminish, what they called, the unfavourable balance of trade, and confequently the exportation of gold and filver.

SUCH as they were, however, those arguments convinced the people to whom they were addreffed. They were addreffed, bymerchants to parliaments, and to the councils of princes, to nobles and to country gentlemen; by those who were supposed to understand trade, to those who were confcious to themselves that they knew nothing about the matter. That foreign trade enricheds the:

THE NATURE AND CAUSES OF

BOOK. the country, experience demonstrated to the nobles and country 1V. gentlemen, as well as to the merchants; but how, or in what ____ manner, none of them well knew. The merchants knew perfectly in what manner it enriched themfelves. It was their bufinefs to know it. But to know in what manner it enriched the country, was no part of their business. This subject never came into their confideration, but when they had occasion to apply to their country for fome change in the laws relating to foreign trade. It then became neceffary to fay fomething about the beneficial effects of foreign trade, and the manner in which those effects were obstructed by the laws as they then flood. To the judges who were to decide the bufinels, it appeared a most fatisfactory account of the matter, when they were told that foreign trade brought money into the country, but that the laws in queftion hindered it from bringing fo much as it otherwife would do. Those arguments therefore produced the wifhed-for effect. The prohibition of exporting gold and filver was in France and England confined to the coin of those respective countries. The exportation of foreign coin and of bullion was made free. In Holland, and in fome other places, this libertywas extended even to the coin of the country. The attention of government was turned away from guarding against the exportation of gold and filver, to watch over the balance of trade, as the only caufe which could occafion any augmentation or diminution of those metals. From one fruitless care it was turned away to another care much more intricate, much more embarraffing, and juft equally fruitless. The title of Mun's book, England's Treasure in Foreign Trade, became a fundamental maxim in the political economy, not of England only, but of all other commercial countries. The inland or home trade, the most important of all, the trade in which an equal capital affords the greateft revenue, and creates the greatest employment to the people of the country, was confidered as fubfidiary only to foreign trade. It neither brought money into the country, it was faid, nor carried any out of it.

3

The

The country therefore could never become either richer or poorer by $C \stackrel{\text{H}}{\underset{I.}{}} A \stackrel{\text{P}}{\underset{I.}{}}$ means of it, except fo far as its profperity or decay might indirectly influence the flate of foreign trade.

A COUNTRY that has no mines of its own must undoubtedly draw its gold and filver from foreign countries, in the fame manner as one that has no vineyards of its own must draw its wines. It does not feem neceffary, however, that the attention of government fhould be more turned towards the one than towards the other object. A country that has wherewithal to buy wine, will always get the wine which it has occasion for; and a country that has wherewithal to buy gold and filver, will never be in want of those metals. They are to be bought for a certain price like all other commodities, and as they are the price of all other commodities, fo all other commodities are the price of those metals. We trust with perfect fecurity that the freedom of trade, without any attention of government, will always fupply us with the wine which we have occasion for: and we may truft with equal fecurity that it will always fupply us with all the gold and filver which we can afford to purchase or to employ, either in circulating our commodities, or in other ules.

THE quantity of every commodity which human industry can either purchafe or produce, naturally regulates itfelf in every country according to the effectual demand, or according to the demand of those who are willing to pay the whole rent, labour and profits which must be paid in order to prepare and bring it to market. But no commodities regulate themselves more easily or more exactly according to this effectual demand than gold and filver; because on account of the smore easily transported from one place to another, from the places where they are cheap, to those where they are dear, from the Vol. II. C places BOOK IV. Places where they exceed, to those where they fall fhort of this effectual demand. If there was in England, for example, an effectual demand for an additional quantity of gold, a packet-boat could bring from Lifbon, or from wherever elfe it was to be had, fifty tuns of gold, which could be coined into more than five millions of guineas. But if there was an effectual demand for grain to the fame value, to import it would require, at five guineas a tun, a million of tuns of fhipping, or a thoufand fhips of a thoufand tuns each. The navy of England would not be fufficient.

> WHEN the quantity of gold and filver imported into any country exceeds the effectual demand, no vigilance of government can prevent their exportation. All the fanguinary laws of Spain and Portugal are not able to keep their gold and filver at home. The continual importations from Peru and Brazil exceed the effectual demand of those countries, and fink the price of those metals there below that in the neighbouring countries. If, on the contrary, in any particular country their quantity fell flort of the effectual demand, fo as to raife their price above that of the neighbouring countries, the government would have no occasion to take any pains to import them. If it was even to take pains to prevent their importation, it would not be able to effectuate it. Thofe metals, when the Spartans had got wherewithal to purchase them, broke through all the barriers which the laws of Lycurgus oppofed to their entrance into Lacedemon. All the fanguinary laws of the cufloms are not able to prevent the importation of the teas of the Dutch and Gottenburgh East India companies; because fomewhat cheaper than those of the British company. A pound of tea, however, is about a hundred times the bulk of one of the highest prices, fixteen shillings, that is commonly paid for it in filver, and more than two thousand times the bulk of the fame

fame price in gold, and confequently just fo many times more dif- C H A P. ficult to fmuggle.

IT is partly owing to the eafy transportation of gold and filver from the places where they abound to those where they are wanted. that the price of those metals does not fluctuate continually like that of the greater part of other commodities, which are hindered by their bulk from shifting their situation, when the market happens to be either over or understocked with them. The price of those metals, indeed, is not altogether exempted from variation, but the changes to which it is liable are generally flow, gradual, and uniform. In Europe, for example, it is supposed, without much foundation, perhaps, that, during the courfe of the prefent and preceding century, they have been conftantly, but gradually, finking in their value, on account of the continual importations from the Spanish West Indies. But to make any fudden change in the price of gold and filver, fo as to raife or lower at once, fenfibly and remarkably, the money price of all other commodities, requires fuch a revolution in commerce as that occafioned by the difcovery of America.

IF, notwithftanding all this, gold and filver fhould at any time fall fhort in a country which has wherewithal to purchafe them, there are more expedients for fupplying their place, than that of almost any other commodity. If the materials of manufacture are wanted, industry must flop. If provisions are wanted, the people must flarve. But if money is wanted, barter will fupply its place, though with a good deal of inconveniency. Buying and felling upon credit, and the different dealers compensating their credits with one another, once a month or once a year, will fupply it with lefs inconveniency. A well regulated paper money will fupply it, not only without any inconveniency, but, in fome cafes, C_2 with BOOK with fome advantages. Upon every account, therefore, the atten-IV. tion of government never was fo unneceffarily employed, as when directed to watch over the prefervation or increase of the quantity of money in any country.

> No complaint, however, is more common than that of a fcarcity of money. Money, like wine, must always be fcarce with those who have neither wherewithal to buy it, nor credit to borrow it. Those who have either, will feldom be in want either of the money, or of the wine which they have occasion for. This complaint, however, of the fcarcity of money, is not always confined to improvident spendthrifts. It is sometimes general through a whole mercantile town, and the country in its neighbourhood. Overtrading is the common caufe of it. Sober men, whole projects have been difproportioned to their capitals, are as likely to have neither wherewithal to buy money, nor credit to borrow it, as prodigals whofe expence has been difproportioned to their revenue. Before their projects can be brought to bear, their flock is gone, and their credit with it. They run about every where to borrow money, and every body tells them that they have none to lend. Even fuch general complaints of the fcarcity of money do not always prove that the ufual number of gold and filver pieces are not circulating in the country, but that many people want those pieces who have nothing to give for them. When the profits of trade happen to be greater than ordinary, overtrading becomes a general error both among great and fmall dealers. They do not always fend more money abroad than ufual, but they buy upon credit both at home and abroad, an unufual quantity of goods, which they fend to fome diftant market, in hopes that the returns will come in before the demand for payment. The demand comes before the returns, and they have nothing at hand, with which they can either purchafe money, or give folid fecurity for borrowing. It is not any fcarcity

fcarcity of gold and filver, but the difficulty which fuch people find C H A P. in borrowing, and which their creditors find in getting payment, that occasions the general complaint of the fcarcity of money.

IT would be too ridiculous to go about ferioufly to prove, that wealth does not confift in money, or in gold and filver; but in what money purchafes, and is valuable only for purchafing. Money, no doubt, makes always a part of the national capital; but it has already been fhown that it generally makes but a finall part, and always the moft unprofitable part of it.

IT is not becaufe wealth confifts more effentially in money than ingoods, that the merchant finds, it generally more eafy to buy goods. with money, than to buy money with goods; but becaufe money. is the known and established instrument of commerce, for whichevery thing is readily given in exchange, but which is not always with equal readiness to be got in exchange for every thing. The greater part of goods befides are more perifhable than money, and he may frequently fuftain a much greater lofs by keeping them. When his goods are upon hand too, he is more liable to fuchdemands for money as he may not be able to answer, than when he has got their price in his coffers. Over and above all this, his profit arifes more directly from felling than from buying, and he is upon all thefe accounts generally much more anxious to exchange his goods for money, than his money for goods. But though a particular merchant, with abundance of goods in. his warehoufe, may fometimes be ruined by not being able to fell them in time, a nation or country is not liable to the fame accident. The whole capital of a merchant frequently confifts in perishable goods deftined for purchasing money. But it is but a. very fmall part of the annual produce of the land and labour of, a country which can ever be defined for purchasing gold and filver. from

B O O K from their neighbours. The far greater part is circulated and confumed among themfelves; and even of the furplus which is fent abroad, the greater part is generally deftined for the purchase of other foreign goods. Though gold and filver, therefore, could not be had in exchange for the goods deftined to purchase them, the nation would not be ruined. It might, indeed, fuffer fomé lofs and inconveniency, and be forced upon fome of those expedients which are neceffary for fupplying the place of money. The annual produce of its land and labour, however, would be the fame, or very nearly the fame, as usual, because the fame, or very nearly the fame confumable capital would be employed in maintaining it. And though goods do not always draw money fo readily as money draws goods, in the long-run they draw it more neceffarily than even it draws them. Goods can ferve many other purposes besides purchasing money, but money can ferve no other purpose besides purchasing goods. Money, therefore, necessarily runs after goods, but goods do not always or neceffarily run after money. The man who buys, does not always mean to fell again, but frequently to use or to confume; whereas he who fells, always means to buy again. The one may frequently have done the whole, but the other can never have done more than the one-half of his bufinefs. It is not for its own fake that men defire money, but for the fake of what they can purchase with it.

> CONSUMABLE commodities, it is faid, are foon deftroyed; whereas gold and filver are of a more durable nature, and, were it not for this continual exportation, might be accumulated for ages together, to the incredible augmentation of the real wealth of the country. Nothing, therefore, it is pretended, can be more difadvantageous to any country, than the trade which confifts in the exchange of fuch lafting for fuch perifhable commodities. We do not, however, reckon that trade difadvantageous which confifts in

in the exchange of the hardware of England for the wines of CHAP. France; and yet hardware is a very durable commodity, and was it not for this continual exportation, might too be accumulated for ages together, to the incredible augmentation of the pots and pans of the country. But it readily occurs that the number of fuch utenfils is in every country neceffarily limited by the ufe which there is for them; that it would be abfurd to have more pots and pans than were neceffary for cooking the victuals ufually confumed there; and that if the quantity of victuals were to increafe, the number of pots and pans would readily increafe along with it, a part of the increased quantity of victuals being employed. in purchasing them, or in maintaining an additional number of workmen whofe bufinefs it was to make them. It fhould as readily occur that the quantity of gold and filver is in every country limited by the use which there is for those metals; that their use confists. in circulating commodities as coin, and in affording a fpecies of houshold furniture as plate; that the quantity of coin in everycountry is regulated by the value of the commodities which are to be circulated by it: increase that value, and immediately a part of it will be fent abroad to purchafe, wherever it is to be had. the additional quantity of coin requifite for circulating them : that the quantity of plate is regulated by the number and wealth of those private families who chule to indulge themselves in that fort of magnificence: increase the number and wealth of such families, and a part of this increased wealth will most probably be employed in purchasing, wherever it is to be found, an additional quantity of plate: that to attempt to increase the wealth of any country, either by introducing or by letaining in it an unneceffary quantity of gold and filver, is as abfurd as it would be to attempt to increase the good cheer of private families, by obliging them to keep an unneceffary number of kitchen utenfils. As the expence of purchafing those unneceffary utenfils would diminish instead of increasing either.

15

~~~

### THE NATURE AND CAUSES OF

BOOK IV.

either the quantity or goodness of the family provisions; fo the expence of purchasing an unnecessary quantity of gold and filver must, in every country, as necessarily diminish the wealth which feeds, cloaths, and lodges, which maintains and employs the people. Gold and filver, whether in the fhape of coin or of plate, are utenfils, it must be remembered, as much as the furniture of the kitchen. Increase the use for them, increase the confumable commodities which are to be circulated, managed, and prepared by means of them, and you will infallibly increase the quantity; but if you attempt, by extraordinary means, to increase the quantity, you will as infallibly diminish the use and even the quantity too, which in those metals can never be greater than what the use requires. Were they ever to be accumulated beyond this quantity, their transportation is fo eafy, and the lofs which attends their lying idle and unemployed fo great, that no law could prevent their being immediately fent out of the country.

IT is not always neceffary to accumulate gold and filver, in order to enable a country to carry on foreign wars, and to maintain fleets and armies in diffant countries. Fleets and armies are maintained, not with gold and filver, but with confumable goods. The nation which, from the annual produce of its domeflic induftry, from the annual revenue arifing out of its lands, labour, and confumable flock, has wherewithal to purchase those confumable goods in diffant countries, can maintain foreign wars there.

A NATION may purchase the pay and provisions of an army in a distant country three different ways; by fending abroad either, first, some part of its accumulated gold and filver; or, secondly, some part of the annual produce of its manufactures; or last of all, some part of its annual rude produce.

THE gold and filver which can properly be confidered as accumu- C H A P. lated or flored up in any country, may be diffinguished into three parts; first, the circulating money; secondly, the plate of private families; and last of all, the money which may have been collected by many years parfimony, and laid up in the treasury of the prince.

IT can feldom happen that much can be fpared from the circulating money of the country; becaufe in that there can feldom be much redundancy. The value of goods annually bought and fold in any country requires a certain quantity of money to circulate and diffribute them to their proper confumers, and can give employment to no more. The channel of circulation neceffarily draws to itfelf a fum fufficient to fill it, and never admits any more. Something, however, is generally withdrawn from this channel in the cafe of foreign war. By the great number of people who are maintained abroad, fewer are maintained at home. Fewer goods are circulated there, and lefs money becomes neceffary to circulate them. An extraordinary quantity of paper money, of fome fort or other too, fuch as exchequer notes, navy bills, and bank bills in England, is generally iffued upon fuch occafions, and by fupplying the place of circulating gold and filver, gives an opportunity of fending a greater quantity of it abroad. All this, however, could afford but a poor refource for maintaining a foreign war, of great expence and feveral years duration.

THE melting down the plate of private families, has upon every occafion been found a fill more infignificant one. The French, in the beginning of the last war, did not derive fo much advantage from this expedient as to compensate the loss of the fashion.

THE accumulated treasures of the prince have, in former times, afforded a much greater and more lasting resource. In the present times, if you except the king of Prussia, to accumulate treasure feems to be no part of the policy of European princes.

VOL. II.

D

THE

BOOK IV.

THE funds which maintained the foreign wars of the prefent century, the most expensive perhaps which history records, feem to have had little dependency upon the exportation either of the circulating money, or of the plate of private families, or of the treafure of the prince. The last French war cost Great Britain upwards of ninety millions, including not only the feventy-five millions of new debt that was contracted, but the additional two fhillings in the pound land tax, and what was annually borrowed of the finking fund. More than two-thirds of this expence was laid out in diffant countries; in Germany, Portugal, America, in the ports of the Mediterranean, in the East and West Indies. The kings of England had no accumulated treasure. We never heard of any extraordinary quantity of plate being melted down. The circulating gold and filver of the country had not been fuppofed to exceed eighteen millions. Since the late recoinage of the gold, however, it is believed to have been a good deal under-rated. Let us fuppofe, therefore. according to the most exaggerated computation which I remember to have either feen or heard of, that, gold and filver together, it amounted to thirty millions. Had the war been carried on, by means of our money, the whole of it must, even according to this computation, have been fent out and returned again at least twice, in a period of between fix and feven years. Should this be fuppofed, it would afford the most decifive argument to demonstrate how unnecessary it is for government to watch over the prefervation of money, fince upon this fuppofition the whole money of the country must have gone from it and returned to it again, two different times in fo fhort a period, without any body's knowing any thing of the matter. The channel of circulation, however, never appeared more empty than ufual during any part of this period. Few people wanted money who had wherewithal to pay for it. The profits of foreign trade, indeed, were greater than ufual during the whole war; but especially towards the end of it. This occasioned, what it always occafions, a general overtrading in all the ports of Great Britain; and this again occasioned the usual complaint of the fcarcity 2

fcarcity of money, which always follows overtrading. Many people wanted it, who had neither wherewithal to buy it, nor credit to borrow it; and becaufe the debtors found it difficult to borrow, the creditors found it difficult to get payment. Gold and filver, however, were generally to be had for their value, by those who had that value to give for them.

THE enormous expence of the late war, therefore, must have been chiefly defrayed, not by the exportation of gold and filver, but by that of British commodities of some kind or other. When the government, or those who acted under them, contracted with a merchant for a remittance to fome foreign country, he would naturally endeavour to pay his foreign correspondent, upon whom he had granted a bill, by fending abroad rather commodities than gold and filver. If the commodities of Great Britain were not in demand in that country, he would endeavour to fend them to fome other country, in which he could purchase a bill upon that country. The transportation of commodities, when properly fuited to the market, is always attended with a confiderable profit; whereas that of gold and filver is fcarce ever attended with any. When those metals are fent abroad in order to purchase foreign commodities, the merchant's profit arifes, not from the purchase, but from the sale of the returns. But when they are fent abroad merely to pay a debt, he gets no returns, and confequently no profit. He naturally, therefore, exerts his invention to find out a way of paying his foreign debts, rather by the exportation of commodities than by that of gold and filver. The great quantity of British goods exported during the courfe of the late war, without bringing back any returns, is accordingly remarked by the author of The Prefent State of the Nation.

BESIDES the three forts of gold and filver above mentioned, there is in all great commercial countries a good deal of bullion alter-D 2 nately

### THE NATURE AND CAUSES OF

BOOK IV.

nately imported and exported for the purpofes of foreign trade. This bullion, as it circulates among different commercial countries in the fame manner as the national coin circulates in every particular country, may be confidered as the money of the great mercantile The national coin receives its movement and direcrepublick. tion from the commodities circulated within the precincts of each particular country: the money of the mercantile republick, from those circulated between different countries. Both are employed in facilitating exchanges, the one between different individuals of the fame, the other between those of different nations. Part of this money of the great mercantile republick may have been, and probably was, employed in carrying on the late war. In time of a general war, it is natural to fuppofe that a movement and direction should be impressed upon it, different from what it usually follows in profound peace; that it should circulate more about the feat of the war, and be more employed in purchasing there, and in the neighbouring countries, the pay and provisions of the different armies. But whatever part of this money of the mercantile republick, Great Britain may have annually employed in this manner, it must have been annually purchased, either with British commodities, or with fomething elfe that had been purchafed with them; which still brings us back to commodities, to the annual produce of the land and labour of the country, as the ultimate refources which enabled us to carry on the war. It is natural indeed to fuppofe, that fo great an annual expence must have been defrayed from a great annual produce. The expence of 1761, for example, amounted to more than nineteen millions. No accumulation could have fupported fo great an annual profufion. There is no annual produce even of gold and filver which could have fupported it. The whole gold and filver annually imported into both Spain and Portugal, according to the beft accounts, does not commonly much exceed fix millions fterling, which,

which, in fome years, would fcarce have paid four months expense C H A P. of the late war.

THE commodities most proper for being transported to distant countries, in order to purchafe there, either the pay and provisions of an army, or fome part of the money of the mercantile republick to be employed in purchafing them, feem to be the finer and more improved manufactures; fuch as contain a great value in a fmall. bulk, and can, therefore, be exported to a great diffance at little A country whole industry produces a great annual expence. furplus of fuch manufactures, which are usually exported to foreign countries, may carry on for many years a very expensive foreign war, without either exporting any confiderable quantity of gold' and filver, or even having any fuch quantity to export. A confiderable part of the annual furplus of its manufactures must, indeed, in this cafe be exported, without bringing back any returns to the country, though it does to the merchant; the government purchafing of the merchant his bills upon foreign countries, in order to purchase there the pay and provisions of an army. Some part of this furplus, however, may still continue to bring back a return. The manufacturers, during the war, will have a double demand upon them, and be called upon, first, to work up goods to be fent abroad, for paying the bills drawn upon foreign countriesfor the pay and provisions of the army; and, fecondly, to work up fuch as are neceffary for purchasing the common returns that had ufually been confumed in the country. In the midft of the most destructive foreign war, therefore, the greater part of manufactures may frequently flourish greatly; and, on the contrary, they may decline on the return of the peace. They may flourish amidst the ruin of their country, and begin to decay upon the return of its prosperity: The different flate of many different branches of the British manufactures during the late war, and for some time after the peace, may ferve as an illustration of what has been just now faid.

No

# THE NATURE AND CAUSES OF

BOOK IV.

No foreign war of great expence or duration could conveniently be carried on by the exportation of the rude produce of the foil. The expence of fending fuch a quantity of it to a foreign country as might purchafe the pay and provisions of an army, would be too great. Few countries too produce much more rude produce than what is fufficient for the fubfistence of their own inhabitants. To fend abroad any great quantity of it, therefore, would be to fend abroad a part of the neceffary fubfistence of the people. It is otherwife with the exportation of manufactures. The maintenance of the people employed in them is kept at home, and only the furplus part of their work is exported. Mr. Hume frequently takes notice of the inability of the ancient kings of England to carry on, without interruption, any foreign war of long duration. The Englifh, in those days, had nothing wherewithal to purchase the pay and provisions of their armies in foreign countries, but either the rude produce of the foil, of which no confiderable part could be fpared from the home confumption, or a few manufactures of the coarfeft kind, of which, as well as of the rude produce, the tranfportation was too expensive. This inability did not arife from the want of money, but of the finer and more improved manufactures. Buying and felling was transacted by means of money in England then, as well as now. The quantity of circulating money muft have borne the fame proportion to the number and value of purchafes and fales ufually transacted at that time, which it does to those transacted at present; or rather it must have borne a greater proportion, becaufe there was then no paper, which now occupies a great part of the employment of gold and filver. Among nations to whom commerce and manufactures are little known, the fovereign, upon extraordinary occafions, can feldom draw any confiderable aid from his fubjects, for reafons which shall be explained hereafter. It is in fuch countries, therefore, that he generally endeavours to accumulate a treasure, as the only refource againft

against fuch emergencies. Independent of this necessity, he is in CHAP. fuch a fituation naturally difpofed to the parfimony requifite for accumulation. In that fimple state, the expence even of a fovereign is not directed by the vanity which delights in the gaudy finery of a court, but is employed in bounty to his tenants, and hospitality to his retainers. But bounty and hospitality very feldom lead to extravagance; though vanity almost always does. Every Tartar chief, accordingly, has a treasure. The treasures of Mazepa, chief of the Coffacks in the Ukraine, the famous ally of Charles the XIIth, are faid to have been very great. The French kings of the Merovingian race had all treafures. When they divided their kingdom among their different children, they divided their treasure too. The Saxon princes, and the first kings after the conquest, feem likewife to have accumulated treasures. The first exploit of every new reign was commonly to feize the treafure of the preceding king, as the most effential measure for fecuring the fucceffion. The fovereigns of improved and commercial countries are not under the fame neceffity of accumulating treasures, becaufe they can generally draw from their fubjects extraordinary aids upon extraordinary occasions. They are likewife lefs difpofed to do fo. They naturally, perhaps neceffarily, follow the mode of the times, and their expence comes to be regulated by the fame extravagant vanity which directs that of all the other great proprietors in their dominions. The infignificant pageantry of their court becomes every day more brilliant, and the expence of it not only prevents accumulation, but frequently encroaches upon the funds deflined for more necessary expences. What Dercyllidas faid of the court of Perfia, may be applied to that of feveral European princes, that he faw there much fplendor but little strength, and many fervants but few foldiers.

THE importation of gold and filver is not the principal, much lefs the fole benefit which a nation derives from its foreign trade. Between

Between whatever places foreign trade is carried on, they all of them derive two diffinct benefits from it. It carries out that furplus part of the produce of their land and labour for which there is no demand among them, and brings back in return for it fomething elfe for which there is a demand. It gives a value to their fuperfluities, by exchanging them for fomething elfe, which may fatisfy a part of their wants, and increase their enjoyments. By means of it, the narrowness of the home market does not hinder the division of labour in any particular branch of art or manufacture from being carried to the highest perfection. By opening a more extensive market for whatever part of the produce of their labour may exceed the home confumption, it encourages them to improve its productive powers, and to augment its annual produce to the utmost, and thereby to increase the real revenue and wealth of the fociety. These great and important services foreign trade is continually occupied in performing, to all the different countries between which it is carried on. They all derive great benefit from it, though that in which the merchant refides generally derives the greateft, as he is generally more employed in fupplying the wants, and carrying out the fuperfluities of his own, than of any other particular country. To import the gold and filver which may be wanted, into the countries which have no mines, is, no doubt, a part of the business of foreign commerce. It is, however, a most infignificant part of it. A country which carried on foreign trade merely upon this account, could fcarce have occasion to freight a ship in a century.

It is not by the importation of gold and filver, that the difcovery of America has enriched Europe. By the abundance of the American mines, those metals have become cheaper. A fervice of plate can now be purchased for about a third part of the corn, or a third part of the labour, which it would have cost in the fifteenth

BOOK

fifteenth century. With the fame annual expence of labour and CHAP. commodities, Europe can annually purchase about three times the quantity of plate which it could have purchafed at that time. But when a commodity comes to be fold for a third part of what had been its ufual price, not only those who purchased it before can purchase three times their former quantity, but it is brought down to the level of a much greater number of purchafers; perhaps to more than ten, perhaps to more than twenty times the former number. So that there may be in Europe at prefent not only more than three times, but more than twenty or thirty times the quantity of plate which would have been in it, even in its prefent state of improvement, had the discovery of the American mines never been made. So far Europe has, no doubt, gained a real conveniency, though furely a very trifling one. The cheapnels of gold and filver renders those metals rather lefs fit for the purposes of money than they were before. In order to make the fame purchafes, we must load ourfelves with a greater quantity of them, and carry about a shilling in our pocket where a groat would have done before. It is difficult to fay which is most trifling, this inconveniency, or the opposite conveniency. Neither the one nor the other could have made any very effential change in the flate of Europe. The discovery of America, however, certainly made a most effential one. By opening a new and inexhaustible market to all the commodities of Europe, it gave occasion to new divisions of labour and improvements of art, which, in the narrow circle of the ancient commerce, could never have taken place for want of a market to take off the greater part of their produce. The productive powers of labour were improved, and its produce increased in all the different countries of Europe, and together with it the real revenue and wealth of the inhabitants. The commodities of Europe were almost all new to America, and many of those of America were new to Europe. VOL. II. E A new

BOOK IV. A new fett of exchanges, therefore, began to take place which had never been thought of before, and which fhould naturally have proved as advantageous to the new, as it certainly did to the old continent. The favage injuffice of the Europeans rendered an event, which ought to have been beneficial to all, ruinous and deftructive to feveral of those unfortunate countries.

> THE discovery of a passage to the East Indies, by the Cape of Good Hope, which happened much about the fame time, opened, perhaps, a still more extensive range to foreign commerce than even that of America, notwithstanding the greater distance. There were but two nations in America, in any respect superior to favages, and thefe were deftroyed almost as foon as difcovered. The reft were mere favages. But the empires of China, Indoftan, Japan, as well as feveral others in the East Indies, without having richer mines of gold or filver, were in every other refpect much richer, better cultivated, and more advanced in all arts and manufactures than either Mexico or Peru, even though we fhould credit, what plainly deferves no credit, the exaggerated accounts of the Spanish writers, concerning the ancient flate of those empires. But rich and civilized nations can always exchange to a much greater value with one another, than with favages and barbarians. Europe, however, has hitherto derived much lefs advantage from its commerce with the East Indies, than from that with America. The Portuguese monopolised the East India trade to themselves for about a century, and it was only indirectly and through them, that the other nations of Europe could either fend out or receive any goods from that country. When the Dutch, in the beginning of the laft century, began to encroach upon them, they vefted their whole East India commerce in an exclusive company. The English, French, Swedes, and Danes, have all followed their example, fo that no great nation in Europe has ever yet had the benefit of a free 4

.26

free commerce to the East Indies. No other reason need be affigned CHAP. why it has never been fo advantageous as the trade to America, which, between almost every nation of Europe and its own colonies, is free to all its fubjects. The exclusive privileges of those East India companies, their great riches, the great favour and protection which these have procured them from their respective governments, have excited much envy against them. This envy has frequently reprefented their trade as altogether pernicious, on account of the great quantities of filver, which it every year exports from the countries from which it is carried on. The parties concerned have replied, that their trade, by this continual exportation of filver, might, indeed, tend to impoverish Europe in general, but not the particular country from which it was carried on; becaufe, by the exportation of a part of the returns to other European countries, it annually brought home a much greater quantity of that metal than it carried out. Both the objection and the reply are founded in the popular notion which I have been just now examining. It is, therefore, unneceffary to fay any thing further By the annual exportation of filver to the Eaft about either. Indies, plate is probably fomewhat dearer in Europe than it otherwife might have been; and coined filver probably purchases a larger quantity both of labour and commodities. The former of these two effects is a very fmall lofs, the latter a very fmall advantage; both too infignificant to deferve any part of the publick attention. The trade to the East Indies, by opening a market to the commodities of Europe, or, what comes nearly to the fame thing, to the gold and filver which is purchased with those commodities, must neceffarily tend to increase the annual production of European commodities, and confequently the real wealth and revenue of Europe. That it has hitherto increased them fo little, is probably owing to the reftraints which it every where labours under.

E 2

I THOUGHT

27 .

ВООК IV.

I THOUGHT it neceffary, though at the hazard of being tedious, to examine at full length this popular notion that wealth confifts in money, or in gold and filver. Money in common language, as I have already obferved, frequently fignifies wealth; and this ambiguity of expression has rendered this popular notion fo familiar to us, that even they, who are convinced of its abfurdity, are very apt to forget their own principles, and in the courfe of their reafonings to take it for granted as a certain and undeniable truth. Some of the best English writers upon commerce fet out with obferving, that the wealth of a country confifts, not in its gold and filver only, but in its lands, houfes, and confumable goods of all different kinds. In the course of their reasonings, however, the lands, houfes, and confumable goods feem to flip out of their memory, and the ftrain of their argument frequently fuppofes that all wealth confifts in gold and filver, and that to multiply those metals is the great object of national industry and commerce.

THE two principles being eftablished, however, that wealth confished in gold and filver, and that those metals could be brought into a country which had no mines only by the balance of trade, or by exporting to a greater value than it imported; it neceffarily became the great object of political æconomy to diminish as much as possible the importation of foreign goods for home-confumption, and to increase as much as possible the exportation of the produce of domestick industry. Its two great engines for enriching the country, therefore, were restraints upon importation, and encouragements to exportation.

THE reftraints upon importation were of two kinds.

FIRST, Reftraints upon the importation of fuch foreign goods for home-confumption as could be produced at home, from whatever country they were imported.

SECONDLY,

SECONDLY, Reftraints upon the importation of goods of almost C H A P. all kinds from those particular countries with which the balance of trade was fupposed to be difadvantageous.

**THOSE** different reflraints confifted fometimes in high duties, and fometimes in abfolute prohibitions.

EXPORTATION was encouraged fometimes by drawbacks, fometimes by bounties, fometimes by advantageous treaties of commerce with foreign flates, and fometimes by the eftablishment of colonies in diffant countries.

DRAWBACKS were given upon two different occasions. When the home-manufactures were subject to any duty or excise, either the whole or a part of it was frequently drawn back upon their exportation; and when foreign goods liable to a duty were imported in order to be exported again, either the whole or a part of this duty was fometimes given back upon such exportation.

BOUNTIES were given for the encouragement either of fome beginning manufactures, or of fuch forts of industry of other kinds as were fuppofed to deferve particular favour.

By advantageous treaties of commerce, particular privileges were procured in fome foreign flate for the goods and merchants of the country, beyond what were granted to those of other countries.

By the eftablishment of colonies in distant countries, not only particular privileges, but a monopoly was frequently procured for

<sup>B</sup> O O K for the goods and merchants of the country which effablished  $\underbrace{IV}_{IV}$  them.

THE two forts of reftraints upon importation above mentioned, together with thefe four encouragements to exportation, conflitute the fix principal means by which the commercial fyftem propofes to increafe the quantity of gold and filver in any country by turning the balance of trade in its favour. I fhall confider each of them in a particular chapter, and without taking much further notice of their fuppofed tendency to bring money into the country, I fhall examine chiefly what are likely to be the effects of each of them upon the annual produce of its induftry. According as they tend either to increafe or diminifh the value of this annual produce, they muft evidently tend either to increafe or diminifh the real wealth and revenue of the country.

## CHAP. II.

# Of Restraints upon the Importation from foreign Countries of such Goods as can be produced at Home.

TY reftraining, either by high duties, or by abfolute prohibitions, C H A P. D the importation of fuch goods from foreign countries as can be produced at home, the monopoly of the home-market is more or lefs fecured to the domeflick industry employed in producing Thus the prohibition of importing either live cattle or. them. falt provisions from foreign countries fecures to the graziers of Great Britain the monopoly of the home-market for butchersmeat. The high duties upon the importation of corn, which in times of moderate plenty amount to a prohibition, give a like advantage to the growers of that commodity. The prohibition of the importation of foreign woollens is equally favourable to the woollen manufacturers. The filk manufacture, though altogether employed upon foreign materials, has lately obtained the fame. advantage. The linen manufacture has not yet obtained it, but is making great firides towards it. Many other forts of manufacturers have, in the fame manner, obtained in Great Britain, either altogether, or very nearly a monopoly against their countrymen.

THAT this monopoly of the home-market frequently gives great: encouragement to that particular fpecies of industry which enjoys it, and frequently turns towards that employment a greater fhare of both the labour and flock of the fociety than would otherwife have gone to it, cannot be doubted. But whether it tends either

10)

BOOK to IV. ad

to increase the general industry of the society, or to give it the most advantageous direction, is not, perhaps, altogether so evident.

THE general induftry of the fociety never can exceed what the capital of the fociety can employ. As the number of workmen that can be kept in employment by any particular perfon muft bear a certain proportion to his capital, fo the number of those that can be continually employed by all the members of a great fociety muft bear a certain proportion to the whole capital of that fociety, and never can exceed that proportion. No regulation of commerce can increase the quantity of industry in any fociety beyond what its capital can maintain. It can only divert a part of it into a direction into which it might not otherwise have gone; and it is by no means certain that this artificial direction is likely to be more advantageous to the fociety than that into which it would have gone of its own accord.

EVERY individual is continually exerting himfelf to find out the moft advantageous employment for whatever capital he can command. It is his own advantage, indeed, and not that of the fociety, which he has in view. But the fludy of his own advantage naturally, or rather neceffarily leads him to prefer that employment which is moft advantageous to the fociety.

FIRST, every individual endeavours to employ his capital as near home as he can, and confequently as much as he can in the fupport of domeflick industry; provided always that he can thereby obtain the ordinary, or not a great deal less than the ordinary profits of flock.

THUS upon equal or nearly equal profits, every wholefale merchant naturally prefers the home-trade to the foreign trade of confumption,

confumption, and the foreign trade of confumption to the carrying CHAP. trade. In the home-trade his capital is never fo long out of his fight as it frequently is in the foreign trade of confumption. He can know better the character and fituation of the perfons whom he trufts, and if he fhould happen to be deceived, he knows better the laws of the country from which he must feek redrefs. In the carrying trade, the capital of the merchant is, as it were, divided between two foreign countries, and no part of it is ever neceffarily brought home, or placed under his own immediate view and com-The capital which an Amsterdam merchant employs in mand. carrying corn from Konnigsberg to Lifbon, and fruit and wine from Lifbon to Konnigfberg, must generally be the one-half of it at Konnigsberg and the other half at Lisbon. No part of it need ever come to Amsterdam. The natural refidence of fuch a merchant should either be at Konnigsberg or Lisbon, and it can only be fome very particular circumstances which can make him prefer the refidence of Amsterdam. The uneafinefs, however, which he feels at being feparated fo far from his capital, generally determines him to bring part both of the Konnigsberg goods which he deftines for the market of Lifbon, and of the Lifbon goods which he deftines for that of Konnigsberg, to Amsterdam : and though this neceffarily fubjects him to a double charge of loading and unloading, as well as to the payment of fome duties and cuftoms, yet for the fake of having fome part of his capital always under his own view and command, he willingly fubmits to this extraordinary charge; and it is in this manner that every country which has any confiderable fhare of the carrying trade, becomes always the emporium, or general market, for the goods of all the different countries whole trade it carries on. The merchant, in order to fave a fecond loading and unloading, endeavours always to fell in the home-market as much of the goods of all those different countries as he can, and thus, so far as he can, to Vol. II. F convert

BOOK IV.

convert his carrying trade into a foreign trade of confumption. A merchant, in the fame manner, who is engaged in the foreign trade of confumption, when he collects goods for foreign markets, will always be glad, upon equal or nearly equal profits, to fell as great a part of them at home as he can. He faves himfelf the rifk and trouble of exportation, when, fo far as he can, he thus converts his foreign trade of confumption into a home-trade. Home is in this manner the center, if I may fay fo, round which the capitals of the inhabitants of every country are continually circulating, and towards which they are always tending, though by particular caufes they may fometimes be driven off and repelled from it towards more distant employments. But a capital employed in the home-trade, it has already been shown, necessarily puts into motion a greater quantity of domestic industry, and gives revenue and employment to a greater number of the inhabitants of the country, than an equal capital employed in the foreign trade of confumption: and one employed in the foreign trade of confumption has the fame advantage over an equal capital employed in the carrying trade. Upon equal, or only nearly equal profits, therefore, every individual naturally inclines to employ his capital in the manner in which it is likely to afford the greateft fupport to domeftic industry, and to give revenue and employment to the greateft number of people of his own country.

SECONDLY, every individual who employs his capital in the fupport of domeftic industry, necessarily endeavours fo to direct that industry, that its produce may be of the greatest possible value.

THE produce of industry is what it adds to the fubject or materials upon which it is employed. In proportion as the value of this produce is great or fmall, fo will likewife be the profits of the employer. But it is only for the fake of profit that any man em-I ploys

ploys a capital in the fupport of industry; and he will always, therefore, endeavour to employ it in the fupport of that industry of which the produce is likely to be of the greatest value, or to exchange for the greatest quantity either of money or of other goods.

But the annual revenue of every fociety is always precifely equal to the exchangeable value of the whole annual produce of its induftry, or rather is precifely the fame thing with that exchangeable value. As every individual, therefore, endeavours as much as he can both to employ his capital in the fupport of domeflick industry, and fo to direct that industry that its produce may be of the greatest value; every individual neceffarily labours to render the annual revenue of the fociety as great as he can. He generally, indeed, neither intends to promote the publick intereft, nor knows how much he is promoting it. By preferring the fupport of domeftic to that of foreign industry he intends only his own fecurity; and by directing that industry in such a manner as its produce may be of the greatest value, he intends only his own gain, and he is in this, as in many. other cafes, led by an invifible hand to promote an end which was no part of his intention. Nor is it always the worfe for the fociety that it was no part of it. By purfuing his own interest he frequently promotes that of the fociety more effectually than when he really intends to promote it. I have never known much good done by those who affected to trade for the publick good. It is an affectation, indeed, not very common among merchants, and very few words need be employed in diffuading them from it.

WHAT is the fpecies of domeflick industry which his capital can employ, and of which the produce is likely to be of the greatest value, every individual, it is evident, can, in his local fituation, judge much better than any states fman or lawgiver can do for him.

F 2

35

The

The flatefman, who fhould attempt to direct private people in what manner they ought to employ their capitals, would not only load himfelf with a moft unneceffary attention, but affume an authority which could fafely be trufted, not only to no fingle perfon, but to no council or fenate whatever, and which would nowhere be fo dangerous as in the hands of a man who had folly and prefumption enough to fancy himfelf fit to exercife it.

To give the monopoly of the home-market to the produce of domestick industry, in any particular art or manufacture, is in fome meafure to direct private people in what manner they ought to employ their capitals, and muft, in almost all cafes, be either a useless or a hurtful regulation. If the produce of domestick can be brought there as cheap as that of foreign industry, the regulation is evidently useless. If it cannot, it must generally be hurtful. It is the maxim of every prudent mafter of a family, never to attempt to make at home what it will coft him more to make than to buy. The taylor does not attempt to make his own fhoes, but buys them of the shoemaker. The shoemaker does not attempt to make his own cloaths, but employs a taylor. The farmer attempts to make neither the one nor the other, but employs those different artificers. All of them find it for their intereft to employ their whole industry in a way in which they have fome advantage over their neighbours, and to purchase with a part of its produce, or what is the fame thing, with the price of a part of it, whatever elfe they have occasion for.

WHAT is prudence in the conduct of every private family, can fearce be folly in that of a great kingdom. If a foreign country can fupply us with a commodity cheaper than we ourfelves can make it, better buy it of them with some part of the produce of our own industry, employed in a way in which we have fome

BOOK

IV.

fome advantage. The general industry of the country, being CHAP. always in proportion to the capital which employs it, will not thereby be diminished; no more than that of the above-mentioned artificers; but only left to find out the way in which it can be employed with the greatest advantage. It is certainly not employed to the greatest advantage, when it is thus directed towards an object which it can buy cheaper than it can make. The value of its annual produce is certainly more or lefs diminished, when it is thus turned away from producing commodities evidently of more value than the commodity which it is directed to produce. According to the fuppolition, that commodity could be purchased from foreign countries cheaper than it can be made at home. It could, therefore, have been purchased with a part only of the commodities, or, what is the fame thing, with a part only of theprice of the commodities, which the industry employed by an equal capital, would have produced at home, had it been left to follow. its natural courfe. The industry of the country, therefore, isthus turned away from a more, to a lefs advantageous employment, and the exchangeable value of its annual produce, instead of being increafed, according to the intention of the lawgiver, must necesfarily be diminished by every such regulation.

By means of fuch regulations, indeed, a particular manufacture may fometimes be acquired fooner than it could have been otherwife, and after a certain time may be made at home as cheap or cheaper than in the foreign country. But though the induftry of the fociety may be thus carried with advantage into a particular channel fooner than it could have been otherwife, it will by no means follow that the fum total, either of its induftry, or of its revenue, can ever be augmented by any fuch regulation. The induftry of the fociety can augment only in proportion as its capital augments, and its capital can augment only in proportion to what can be gradually faved out of its revenue. But the immediate effect of every.

every fuch regulation is to diminish its revenue, and what diminishes its revenue, is certainly not very likely to augment its capital faster than it would have augmented of its own accord, had both capital and industry been left to find out their natural employments.

THOUGH for want of fuch regulations the fociety fhould never acquire the proposed manufacture, it would not, upon that account, neceffarily be the poorer in any one period of its duration. In every period of its duration its whole capital and industry might fill have been employed, though upon different objects, in the manner that was most advantageous at the time. In every period its revenue might have been the greatest which its capital could afford, and both capital and revenue might have been augmented with the greatest possible rapidity.

THE natural advantages which one country has over another in producing particular commodities are fometimes fo great, that it is acknowledged by all the world to be in vain to ftruggle with them. By means of glaffes, hotbeds, and hotwalls, very good grapes can be raifed in Scotland, and very good wine too can be made of them at about thirty times the expence for which at least equally good can be brought from foreign countries: Would it be a reafonable law to prohibit the importation of all foreign wines, merely to encourage the making of claret and burgundy in Scotland? But if there would be a manifest abfurdity in turning towards any employment, thirty times more of the capital and industry of the country, than would be neceffary to purchase from foreign countries an equal quantity of the commodities wanted, there must be an abfurdity, though not altogether fo glaring, yet exactly of the fame kind, in turning towards any fuch employment a thirtieth, or even a three hundredth part more of either. Whether the advantages which one country has over another, be natural or acquired,

quired, is in this refpect of no confequence. As long as the one country has those advantages, and the other wants them, it will always be more advantageous for the latter, rather to buy of the former than to make. It is an acquired advantage only, which one artificer has over his neighbour, who exercises another trade; and yet they both find it more advantageous to buy of one another, than to make what does not belong to their particular. trades.

MERCHANTS and manufacturers are the people who derive the greatest advantage from this monopoly of the home market. The prohibition of the importation of foreign cattle, and of falt provisions, together with the high duties upon foreign corn, which in times of moderate plenty amount to a prohibition, are not near fo advantageous to the graziers and farmers of Great Britain, as other regulations of the fame kind are to its merchants and manufacturers. Manufactures, those of the finer kind especially, are more eafily transported from one country to another than corn or cattle. It is in the fetching and carrying manufactures, accordingly, that foreign trade is chiefly employed. In manufactures, a very fmall advantage will enable foreigners to underfell our own workmen, even in the home market. It will require a very great one to enable them to do fo in the rude produce of the foil. If the free importation of foreign manufactures was permitted, feveral of the home manufactures would probably fuffer, and fome of them, perhaps, go to ruin altogether, and a confiderable part of the flock and industry at prefent employed in them, would be forced to find out fome other employment. But the freest importation of the rude produce of the foil could have no fuch effect: upon the agriculture of the country.

IF the importation of foreign cattle, for example, was made ever fo free, fo few could be imported, that the grazing trade of Great Britain

CHAP.

BOOK

Britain could be little affected by it. Live cattle are, perhaps, the only commodity of which the transportation is more expensive by fea than by land. By land they carry themfelves to market. By fea, not only the cattle, but their food and their water too must be carried at no fmall expence and inconveniency. The fhort fea between Ireland and Great Britain, indeed, renders the importation of Irith cattle more eafy. But though the free importation of them, which was lately permitted only for a limited time, were rendered perpetual, it could have no confiderable effect upon the interest of the graziers of Great Britain. Those parts of Great Britain which border upon the Irifh fca are all grazing countries. Irifh cattle could never be imported for their use, but must be drove through those very extensive countries, at no finall expence and inconveniency, before they could arrive at their proper market. Fat cattle could not be drove fo far. Lean cattle, therefore, only could be imported, and fuch importation could interfere, not with the interest of the feeding or fattening countries, to which, by reducing the price of lean cattle, it would rather be advantageous. but with that of the breeding countries only. The fmall number of Irish cattle imported fince their importation was permitted, together with the good price at which lean cattle ftill continue to fell, feem to demonstrate that even the breeding countries of Great Britain are never likely to be much affected by the free importation of Irish cattle. The common people of Ireland, indeed, are faid to have fometimes oppofed with violence the exportation of their But if the exporters had found any great advantage in cattle. continuing the trade, they could eafily, when the law was on their fide, have conquered this mobbifh oppofition.

FEEDING and fattening countries, befides, must always be highly improved, whereas breeding countries are generally uncultivated. The high price of lean cattle, by augmenting the value

of

of uncultivated land, is like a bounty against improvement. To any country which was highly improved throughout, it would be more advantageous to import its lean cattle than to breed them. The province of Holland, accordingly, is faid to follow this maxim at prefent. The mountains of Scotland, Wales, and Northumberland, indeed, are countries not capable of much improvement, and feem defined by nature to be the breeding countries of Great Britain. The freess importation of foreign cattle could have no other effect than to hinder those breeding countries from taking advantage of the increasing population and improvement of the rest of the kingdom, from raising their price to an exorbitant height, and from laying a real tax upon all the more improved and cultivated parts of the country.

THE freeft importation of falt provisions, in the fame manner, could have as little effect upon the intereft of the graziers of Great Britain as that of live cattle. Salt provisions are not only a very bulky commodity, but when compared with frefh meat, they are a commodity both of worfe quality, and as they coft more labour and expence, of higher price. They could never, therefore, come into competition with the frefh meat, though they might with the falt provisions of the country. They might be used for victualling thips for distant voyages, and fuch like uses, but could never make any confiderable part of the food of the people. The finall quantity of falt provisions imported from Ireland fince their importation was rendered free, is an experimental proof that our graziers have nothing to apprehend from it. It does not appear that the price of butcher's-meat has ever been fensibly affected by it.

EVEN the free importation of foreign corn could very little affect the intereft of the farmers of Great Britain. Corn is a much more bulky commodity than butcher's meat. A pound of Vol. II. G wheat

CHAP.

-

BOOK wheat at a penny is as dear as a pound of butcher's-meat at fourpence. The fmall quantity of foreign corn imported even in times of the greateft fearcity, may fatisfy our farmers that they can have nothing to fear from the freeft importation. The average quantity imported, one year with another, amounts only, according to the very well informed author of the tracts upon the corn trade, to twenty-three thousand seven hundred and twenty-eight quarters of all forts of grain, and does not exceed the five hundredth and feventyone part of the annual confumption. But as the bounty upon corn occasions a greater exportation in years of plenty, fo it must of confe-" quence occasion a greater importation in years of fcarcity, than in the actual flate of tillage, would otherwife take place. By means of it, the plenty of one year does not compendate the fcarcity of another, and as the average quantity exported is neceffarily augmented by it, fo must likewife, in the actual state of tillage, the average quantity imported. If there was no bounty, as lefs corn would be exported, fo it is probable that, one year with another, lefs would be imported than at prefent. The corn merchants, the fetchers and carriers of corn, between Great Britain and foreign countries, would have much lefs employment, and might fuffer confiderably; but the country gentlemen and farmers could fuffer very little. It is in the corn merchants accordingly, rather than in the country gentlemen

> and farmers, that I have observed the greatest anxiety for the renewal and continuation of the bounty. COUNTRY gentlemen and farmers are, to their great honour, of all people, the least fubject to the wretched spirit of monopoly. The undertaker of a great manufactory is fometimes alarmed if another work of the fame kind is established within twenty miles of him. The Dutch undertaker of the woollen manufacture at Abbeville, stipulated that no work of the fame kind should be established within thirty leagues of that city. Farmers and country

> > gentlemen,

CHAP. gentlemen, on the contrary, are generally disposed rather to promote than to obstruct the cultivation and improvement of their neighbours farms and eftates. They have no fecrets, fuch as those of the greater part of manufacturers, but are generally rather fond of communicating to their neighbours, and of extending as far as poffible any new practice which they have found to be advantageous. Pius Questus, fays old Cato, stabilissimusque, minimeque invidiosus; minimeque male cogitantes sunt, qui in eo studio occupati funt. Country gentlemen and farmers, dispersed in different parts of the country, cannot fo cafily combine as merchants and manufacturers, who being collected into towns, and accustomed to that exclusive corporation spirit which prevails in them, naturally endeavour to obtain against all their countrymen, the fame exclusive privilege which they generally poffers against the inhabitants of their respective towns. They accordingly seem to have been the original inventors of those restraints upon the importation of foreign goods, which fecure to them the monopoly of the home-market. It was probably in imitation of them, and to put themfelves upon a level with those, who, they found were difuofed to opprefs them, that the country gentlemen and farmers of Great Britain fo far forgot the generofity which is natural to their flation, as to demand the exclusive privilege of fupplying their countrymen with corn and butcher's-meat. They did not perhaps take time to confider, how much less their interest could be affected by the freedom of trade, than that of the people whofe example they followed.

To prohibit by a perpetual law the importation of foreign corn and cattle, is in reality to enact, that the population and industry of the country shall at no time exceed what the rude produce of its own foil can maintain.

G 2

THERE

BOOK IV. THERE feem, however, to be two cafes in which it will generally be advantageous to lay fome burden upon foreign, for the encouragement of domeflick induftry.

> THE first is when fome particular fort of industry is necessary for the defence of the country. The defence of Great Britain, for example, depends very much upon the number of its failors and shipping. The act of navigation, therefore, very properly endeavours to give the failors and shipping of Great Britain the monopoly of the trade of their own country, in some cases, by absolute prohibitions, and in others by heavy burdens upon the shipping of foreign countries. The following are the principal difpositions of this act:

> FIRST, all fhips, of which the owners, mafters, and three-fourths of the mariners are not British subjects, are prohibited, upon pain of forfeiting ship and cargo, from trading to the British settlements and plantations, or from being employed in the coasting trade of Great Britain.

> SECONDLY, a great variety of the most bulky articles of importation can be brought into Great Britain only, either in fuch fhips as are above deferibed, or in fhips of the country where those goods are produced; and of which the owners, masters, and three-fourths of the mariners, are of that particular country; and when imported even in fhips of this latter kind, they are fubject to double aliens duty. If imported in fhips of any other country, the penalty is forfeiture of fhip and cargo. When this act was made, the Dutch were, what they ftill are, the great carriers of Europe, and by this regulation they were entirely excluded from being the carriers to Great Britain, or from importing to us the goods of any other European country.

THIRDLY, a great variety of the most bulky articles of im- CHAP. portation are prohibited from being imported, even in British ships, from any country but that in which they are produced; under pain of forfeiting ship and cargo. This regulation too was probably intended against the Dutch. Holland was then, as now, the great emporium for all European goods, and by this regulation, British fhips were hindered from loading in Holland the goods of any other European country.

FOURTHLY, falt fish of all kinds, whale-fins, whale bone, oil, and blubber, not caught by and cured on board British veffels, when imported into Great Britain, are fubjected to double aliens duty. The Dutch, as they are still the principal, were then the only fishers in Europe that attempted to fupply foreign nations with fifth. By this regulation, a very heavy burden was laid upon their fupplying Great Britain.

WHEN the act of navigation was made, though England and Holland were not actually at war, the most violent animolity fubfifted between the two nations. It had begun during the government of the long parliament, which first framed this act, and it broke out foon after in the Dutch wars during that of the Protector and of Charles the IId. It is not impossible, therefore, that some of the regulations of this famous act may have proceeded from national animofity. They are as wife, however, as if they had all been dictated by the most deliberate wifdom. National animofity at that particular time aimed at the very fame object which the most deliberate wildom would have recommended, the diminution of the naval power of Holland, the only naval power which could endanger the fecurity of England.

THE act of navigation is not favourable to foreign commerce, or to the growth of that opulence which can arife from it. The intereft 45

~

interest of a nation in its commercial relations to foreign nations is, like that of a merchant with regard to the different people with whom he deals, to buy as cheap and to fell as dear as poffible. But it will be most likely to buy cheap, when by the most perfect freedom of trade it encourages all nations to bring to it the goods which it has occasion to purchase; and, for the same reason, it will be most likely to fell dear, when its markets are thus filled with the greatest number of buyers. The act of navigation, it is true, lays no burden upon foreign fhips that come to export the produce of British industry. Even the antient aliens duty, which used to be paid upon all goods exported as well as imported, has, by feveral fublequent acts, been taken off from the greater part of the articles of exportation. But if foreigners, either by prohibitions or high duties, are hindered from coming to fell, they cannot always afford to come to buy; becaufe coming without a cargo, they muft lofe the freight from their own country to Great Britain. By diminishing the number of fellers, therefore, we neceffarily diminish that of buyers, and are thus likely not only to buy foreign goods dearer, but to fell our own cheaper, than if there was a more perfect freedom of As defence, however, is of much more importance than trade. opulence, the act of navigation is, perhaps, the wifest of all the commercial regulations of England.

THE fecond cafe, in which it will generally be advantageous to lay fome burden upon foreign for the encouragement of domeflick induftry, is, when fome tax is impofed at home upon the produce of the latter. In this cafe, it feems reafonable that an equal tax fhould be impofed upon the like produce of the former. This would not give the monopoly of the home market to domeflick induftry, nor turn towards a particular employment a greater fhare of the flock and labour of the country, than what would naturally go to it. It would only hinder any part of what would naturally go

46

BOOK

IV.

go to it from being turned away by the tax, into a lefs natural C H A P. direction, and would leave the competition between foreign and domeflick induftry, after the tax, as nearly as poffible upon the fame footing as before it. In Great Britain, when any fuch tax is laid upon the produce of domeflick induftry, it is ufual at the fame time, in order to flop the clamorous complaints of our merchants and manufacturers, that they will be underfold at home, to lay a much heavier duty upon the importation of all foreign goods of the fame kind.

THIS fecond limitation of the freedom of trade according to fome people fhould, upon fome occafions, be extended much further than to the precife foreign commodities which could come into competition with those which had been taxed at home. When the neceffaries of life have been taxed in any country, it becomes proper, they pretend, to tax not only the like neceffaries of life imported from other countries, but all forts of foreign goods which can come into competition with any thing that is the produce of domestick industry. Sublistence, they fay, becomes necessarily dearer in confequence of fuch taxes; and the price of labour must always rife with the price of the labourers fubfiftence. Every commodity, therefore, which is the produce of domeflick industry, though not immediately taxed itfelf, becomes dearer in confequence of fuch taxes, becaufe the labour which produces it becomes fo. Such taxes, therefore, are really equivalent, they fay, to a tax. upon every particular commodity produced at home. In order to put domeflick upon the fame footing with foreign industry, therefore, it becomes neceffary, they think, to lay fome duty upon every foreign commodity, equal to this enhancement of the price of the home commodities with which it can come into competition.

#### WHETHER

WHETHER taxes upon the neceffaries of life, fuch as those in Great Britain upon foap, falt, leather, candles, &c. neceffarily raife the price of labour, and confequently that of all other commodities, I fhall confider hereafter, when I come to treat of taxes. Suppofing, however, in the mean time, that they have this effect, and they have it undoubtedly, this general enhancement of the price of all commodities, in confequence of that of labour, is a cafe which differs in the two following respects from that of a particular commodity, of which the price was enhanced by a particular tax immediately imposed upon it.

FIRST, it might always be known with great exactnefs how far the price of fuch a commodity could be enhanced by fuch a tax: but how far the general enhancement of the price of labour might affect that of every different commodity, about which labour was employed, could never be known with any tolerable exactnefs. It would be impoffible, therefore, to proportion with any tolerable exactnefs the tax upon every foreign, to this enhancement of the price of every home commodity.

SECONDLY, taxes upon the neceffaries of life have nearly the fame effect upon the circumftances of the people as a poor foil and a bad climate. Provisions are thereby rendered dearer in the fame manner as if it required extraordinary labour and expence to raife them. As in the natural fcarcity arising from foil and climate, it would be abfurd to direct the people in what manner they ought to employ their capitals and industry, fo is it likewife in the artificial fcarcity arising from fuch taxes. To be left to accommodate, as well as they could, their industry to their fituation, and to find out those employments in which, notwithstanding their unfavourable circumftances, they might have fome advantage either in the

ВООК

the home or in the foreign market, is what in both cafes would evidently be most for their advantage. To lay a new tax upon them, because they are already overburdened with taxes, and because they already pay too dear for the necessaries of life, to make them likewise pay too dear for the greater part of other commodities, is certainly a most absurd way of making amends.

SUCH taxes, when they have grown up to a certain height, are a curfe equal to the barrennefs of the earth and the inclemency of the heavens; and yet it is in the richeft and moft induftrious countries that they have been moft generally imposed. No other countries could fupport fo great a diforder. As the ftrongeft bodies only can live and enjoy health, under an unwholefome regimen; fo the nations only, that in every fort of induftry have the greateft natural and acquired advantages, can fubfift and profper under fuch taxes. Holland is the country in Europe in which they abound moft, and which from peculiar circumftances continues to profper, not by means of them, as has been moft abfurdly fuppofed, but in fpite of them.

As there are two cafes in which it will generally be advantageous to lay fome burden upon foreign, for the encouragement of domeftick induftry; fo there are two others in which it may fometimes be a matter of deliberation; in the one, how far it is proper to continue the free importation of certain foreign goods; and in the other, how far, or in what manner it may be proper to reftore that free importation after it has been for fome time interrupted.

THE cafe in which it may fometimes be a matter of deliberation how far it is proper to continue the free importation of certain foreign goods, is, when fome foreign nation reftrains by high duties or prohibitions the importation of fome of our manufactures into Vol. II. H their

СНАР.

their country. Revenge in this cafe naturally dictates retaliation, and that we fhould impose the like duties and prohibitions upon the importation of fome or all of their manufactures into ours. Nations, accordingly, feldom fail to retaliate in this manner. The French have been particularly forward to favour their own manufactures by reftraining the importation of fuch foreign goods as could come into competition with them. In this confifted a great part of the policy of Mr. Colbert, who, notwithstanding his great abilities, feems in this cafe to have been imposed upon by the fophiftry of merchants and manufacturers, who are always demanding a monopoly against their countrymen. It is at prefent the opinion of the most intelligent men in France that his operations of this kind have not been beneficial to his country. That minister, by the tarif of 1667, impofed very high duties upon a great number of foreign manufactures. Upon his refufing to moderate them in favour of the Dutch, they in 1671 prohibited the importation of the wines, brandies, and manufactures of France. The war of 1672 feems to have been in part occalioned by this commercial dispute. The peace of Nimeguen put an end to it in 1678, by moderating fome of those duties in favour of the Dutch, who in confequence took off their prohibition. It was about the fame time that the French and English began mutually to oppress each other's industry, by the like duties and prohibitions, of which the French, however, feem to have fet the first example. The spirit of hoftility which has fublisted between the two nations ever fince, has hitherto hindered them from being moderated on either fide. In 1697 the English prohibited the importation of bonelace, the manufacture of Flanders. The government of that country, at that time under the dominion of Spain, prohibited in return the importation of English woollens. In 1700, the prohibition of importing bonelace into England, was taken off upon condition that the importation of English woollens into Flanders should be put on the fame footing as before.

THERE

BOOK

IV.

er costs

51

----

THERE may be good policy in retaliations of this kind, when CHAP. there is a probability that they will procure the repeal of the high duties or prohibitions complained of. The recovery of a great foreign market will generally more than compensate the transitory inconveniency of paying dearer during a fhort time for fome forts of goods. To judge whether fuch retaliations are likely to produce fuch an effect, does not, perhaps, belong fo much to the fcience of a legiflator, whole deliberations ought to be governed by general principles which are always the fame, as to the skill of that infidious and crafty animal, vulgarly called a statesman or politician, whofe councils are directed by the momentary fluctuations of affairs. When there is no probability that any fuch repeal can be procured, it feems a bad method of compensating the injury done to certain claffes of our people, to do another injury ourfelves, not only to those classes, but to almost all the other classes of them. When our neighbours prohibit fome manufacture of ours, we generally prohibit, not only the fame, for that alone would feldom affect them confiderably, but fome other manufacture of theirs. This may no doubt give encouragement to fome particular clafs of workmen among ourfelves, and by excluding fome of their rivals, may enable them to raife their price in the home-market. Those workmen, however, who fuffered by our neighbours prohibition will not be benefited by ours. On the contrary, they and almost all the other claffes of our citizens will thereby be obliged to pay dearer than before for certain goods. Every fuch law, therefore, impofes a real tax upon the whole country, not in favour of that particular clafs of workmen who were injured by our neighbours prohibition, but of some other class.

THE cafe in which it may fometimes be a matter of deliberation, how far, or in what manner it is proper to reftore the free importation of foreign goods, after it has been for fome time interrupted, is,

H 2

**BOOK** IV. IV. is, when particular manufactures, by means of high duties or prohibitions upon all foreign goods which can come into competition with them, have been fo far extended as to employ a great multitude of hands. Humanity may in this cafe require that the freedom of trade fhould be reftored only by flow gradations, and with a good deal of referve and circumfpection. Were those high duties and prohibitions taken away all at once, cheaper foreign goods of the fame kind might be poured fo fast into the home market, as to deprive all at once many thousands of our people of their ordinary employment and means of fubfishence. The diforder which this would occasion might no doubt be very confiderable. It would in all probability, however, be much lefs than is commonly imagined, for the two following reafons:

> FIRST, all those manufactures, of which any part is commonly exported to other European countries without a bounty, could be very little affected by the freeft importation of foreign goods. Such manufactures must be fold as cheap abroad as any other foreign goods of the fame quality and kind, and confequently must be fold cheaper at home. They would ftill, therefore, keep poffeffion of the home market, and though a capricious man of fashion might fometimes prefer foreign wares, merely becaufe they were foreign, to cheaper and better goods of the fame kind that were made at home, this folly could, from the nature of things, extend to fo few, that it could make no fenfible impreffion upon the general employment. of the people. But a great part of all the different branches of our woollen manufacture, of our tanned leather, and of our hardware, are annually exported to other European countries without. any bounty, and thefe are the manufactures which employ the greatest number of hands. The filk, perhaps, is the manufacture which would fuffer the most by this freedom of trade, and after it the linen, though the latter much lefs than the former.

> > SECONDLY,

CHAP. SECONDLY, though a great number of people should, by thus refloring the freedom of trade, be thrown all at once out of their ordinary employment and common method of fubfistence, it would by no means follow that they would thereby be deprived either of employment or fublifience. By the reduction of the army and navy at the end of the late war more than a hundred thousand foldiers and feamen, a number equal to what is employed in the greatest manufactures, were all at once thrown out of their ordinary employment; but, though they no doubt fuffered fome inconveniency, they were not thereby deprived of all employment and fublistence. The greater part of the feamen, it is probable, gradually betook themfelves to the merchant-fervice as they could find occafion, and in the mean time both they and the foldiers were abforbed in the great mass of the people, and employed in a great variety of occupations. Not only no great convulsion, but no fensible diforder arole from fo great a change in the fituation of more than a hundred thousand men, all accustomed to the use of arms, and many of them to rapine and plunder. The number of vagrants was fcarce anywhere fenfibly increafed by it, even the wages of labour were not reduced by it in any occupation, fo far as I have been able to learn, except in that of feamen in the merchant-fervice. But if we compare together the habits of a foldier and of any fort of manufacturer, we shall find that those of the latter do not tend fo much to difqualify him from being employed in a new trade, as those of the former from being employed in any. The manufacturer has always been accuftomed to look for his fublistence. from his labour only : the foldier to expect it from his pay. Application and industry have been familiar to the one; idleness and diffipation to the other. But it is furely much eafier to change the direction of industry from one fort of labour to another, than toturn idleness and diffipation to any. To the greater part of manufactures befides, it has already been observed, there are other collateral.

BOOK IV.

collateral manufactures of so similar a nature, that a workman can eafily transfer his industry from one of them to another. The greater part of fuch workmen too are occasionally employed in country labour. The flock which employed them in a particular manufacture before, will still remain in the country to employ an equal number of people in fome other way. The capital of the country remaining the fame, the demand for labour will likewife be the fame, or very nearly the fame, though it may be exerted in different places and for different occupations. Soldiers and feamen, indeed, when discharged from the king's fervice, are at liberty to exercife any trade, within any town or place of Great Britain or Ireland. Let the fame natural liberty of exercifing what fpecies of industry they please be reftored to all his majesty's subjects, in the fame manner as to foldiers and feamen; that is, break down the exclusive privileges of corporations, and repeal the flatute of apprenticeship, both which are real encroachments upon natural liberty, and add to thefe the repeal of the law of fettlements, fo that a poor workman, when thrown out of employment either in one trade or in one place, may seek for it in another trade or in another place, without the fear either of a profecution or of a removal, and neither the publick nor the individuals will fuffer much more from the occasional difbanding fome particular classes of manufacturers, than from that of foldiers. Our manufacturers have no doubt great merit with their country, but they cannot have more than those who defend it with their blood, nor deferve to be treated with more delicacy.

To expect, indeed, that the freedom of trade fhould ever be entirely reftored in Great Britain, is as abfurd as to expect that an Oceana or Utopia fhould ever be eftablished in it. Not only the prejudices of the publick, but what is much more unconquerable, the private interests of many individuals, irrefistibly oppose it. Were the officers officers of the army to oppose with the fame zeal and unanimity CHAP. any reduction in the number of forces, with which mafter manu- u facturers fet themfelves against every law that is likely to increase the number of their rivals in the home market; were the former to animate their foldiers, in the fame manner as the latter enflame their workmen, to attack with violence and outrage the propofers of any fuch regulation; to attempt to reduce the army would be. as dangerous as it has now become to attempt to diminish in any refpect the monopoly which our manufacturers have obtained. This monopoly has fo much increased the number againft, us. of fome particular tribes of them, that, like an overgrown flanding army, they have become formidable to the government, and upon many occasions intimidate the legislature. The member of parliament who fupports every propofal for ftrengthening this monopoly, is fure to acquire not only the reputation of underftanding trade, but great popularity and influence with an order of men whofe numbers and wealth render them of great importance. If he oppofes them, on the contrary, and ftill more if he has authority enough to be able to thwart them, neither the most acknowledged probity, nor the higheft rank, nor the greateft publick fervices can protect him from the most infamous abuse and detraction, from perfonal infults, nor fometimes from real danger, arifing from the infolent outrage of furious and difappointed monopolifts.

THE undertaker of a great manufacture who, by the home markets being fuddenly laid open to the competition of foreigners, fhould be obliged to abandon his trade, would no doubt fuffer very confiderably. That part of his capital which had ufually been employed in purchafing materials and in paying his workmen, might, without much difficulty, perhaps, find another employment. But that part of it which was fixed in workhoufes, and 'in the infiruments of trade, could fcarce be difpofed of without confiderable

3

lofs.

BOOK lofs. The equitable regard, therefore, to his intereft requires that changes of this kind fhould never be introduced fuddenly, but flowly, gradually, and after a very long warning. The legiflature, were it poffible that its deliberations could be always directed, not by the clamorous importunity of partial interefts, but by an extensive view of the general good, ought upon this very account, perhaps, to be particularly careful neither to effablish any new monopolies of this kind, nor to extend further those which are already effablished. Every fuch regulation introduces fome degree of real diforder into the conflitution of the flate, which it will be difficult afterwards to cure without occasioning another diforder.

How far it may be proper to impose taxes upon the importation of foreign goods, in order, not to prevent their importation, but to raise a revenue for government, I shall confider hereafter when I come to treat of taxes. Taxes imposed with a view to prevent, or even to diminish importation, are evidently as destructive of the revenue of the customs as of the freedom of trade.

### CHAP. III.

Of the extraordinary Restraints upon the Importation of Goods of almost all Kinds, from those Countries with which the Balance is supposed to be disadvantageous.

#### PART I.

# Of the Unreasonableness of those Restraints even upon the Principles of the Commercial System.

O lay extraordinary reftraints upon the importation of goods CHAP. of almost all kinds, from those particular countries with which the balance of trade is fuppofed to be difadvantageous, is the fecond expedient by which the commercial fystem proposes to increafe the quantity of gold and filver. Thus in Great Britain higher duties are laid upon the wines of France than upon those of Portugal. German linen may be imported upon paying certain duties; but French linen is altogether prohibited. The principles which I have been examining, took their origin from private intereft and the fpirit of monopoly: those which I am going to examine from national prejudice and animofity. They are, accordingly, as might well be expected, ftill more unreasonable. They are fo, even upon the principles of the commercial fystem.

FIRST, though it were certain that in the cafe of a free trade between France and England, for example, the balance would be in favour of France, it would by no means follow that fuch a trade would be difadvantageous to England, or that the general balance of its whole trade would thereby be turned more against it. If the wines of France are better and cheaper than those of Portugal, or its linens than those of Germany, it would be more advantageous Ι for

Vol. II.

for Great Britain to purchafe both the wine and the foreign linen which it had occafion for of France, than of Portugal and Germany. Though the value of the annual importations from France would thereby be greatly augmented, the value of the whole annual importations would be diminifhed, in proportion as the French goods of the fame quality were cheaper than those of the other two countries. This would be the cafe, even upon the fuppolition that the whole French goods imported were to be confumed in Great Britain.

BUT, fecondly, a great part of them might be re-exported to other countries, where, being fold with profit they might bring back a return equal in value, perhaps, to the prime cost of the whole French goods imported. What has frequently been faid of the East India trade might possibly be true of the French; that though the greater part of East India goods were bought with gold and filver, the re-exportation of a part of them to other countries, brought back more gold and filver to that which carried on the trade than the prime cost of the whole amounted to. One of the most important branches of the Dutch trade, at present, confists in the carriage of French goods to other European countries. Some part even of the French wine drank in Great Britain is clandeftinely imported from Holland and Zealand. If there was either a free trade between France and England, or if French goods could be imported upon paying only the fame duties as those of other European nations, to be drawn back upon exportation, England might have some share of a trade which is found to advantageous to Holland.

THIRDLY, and laftly, there is no certain criterion by which we can determine on which fide what is called the balance between any two countries lies, or which of them exports to the greateft value. National prejudice and animofity, prompted always by the private intereft

ВООК

\_\_\_\_

intereft of particular traders, are the principles which generally direct our judgment upon all queftions concerning it. There are two criterions, however, which have frequently been appealed to upon fuch occafions, the cuftom-houfe books and the courfe of exchange. The cuftom-houfe books, I think, it is now generally acknowledged, are a very uncertain criterion, on account of the inaccuracy of the valuation at which the greater part of goods are rated in them. The courfe of exchange is, perhaps, almoft equally fo.

WHEN the exchange between two places, fuch as London and Paris, is at par, it is faid to be a fign that the debts due from London to Paris are compensated by those due from Paris to London. On the contrary, when a premium is paid at London for a bill upon Paris, it is faid to be a fign that the debts due from London to Paris are not compensated by those due from Paris to London, but that a balance in money must be fent out from the latter place; for the rifk, trouble, and expence of exporting which, the premium is both demanded and given. But the ordinary state of debt and credit between those two cities must necessarily be regulated, it is faid, by the ordinary courfe of their dealings with one another. When neither of them imports from the other to a greater amount than it exports to it, the debts and credits of each may compensate one another. But when one of them imports from the other to a greater value than it exports to it, the former neceffarily becomes indebted to the latter in a greater fum than the latter becomes indebted to it : the debts and credits of each do not compensate one another, and money must be fent out from that place of which the debts over-balance the credits. The ordinary course of exchange, therefore, being an indication of the ordinary flate of debt and credit between two places, must likewise be an indication of the ordinary courfe of their exports and imports, as thefe necessarily regulate that flate.

I 2

But

59

CHAP.

BUT though the ordinary courfe of exchange fhould be allowed to be a fufficient indication of the ordinary flate of debt and credit between any two places, it would not from thence follow, that the balance of trade was in favour of that place which had the ordinary flate of debt and credit in its favour. The ordinary flate of debt and credit between any two places is not always entirely regulated by the ordinary courfe of their dealings with one another; but is often influenced by that of the dealings of either with many other places. If it is usual, for example, for the merchants of England to pay for the goods which they buy of Hamburgh, Dantzic, Riga, &c. by bills upon Holland, the ordinary state of debt and credit between England and Holland will not be regulated entirely by the ordinary course of the dealings of those two countries with one another, but will be influenced by that of the dealings of England with those other places. England may be obliged to fend out every year money to Holland, though its annual exports to that country may exceed very much the annual value of its imports from thence; and though what is called the balance of trade may be very much in favour of England.

In the way befides in which the par of exchange has hitherto been computed, the ordinary courfe of exchange can afford no fufficient indication that the ordinary flate of debt and credit is in favour of that country which feems to have, or which is fuppofed to have, the ordinary courfe of exchange in its favour : or, in other words, the real exchange may be, and, in fact, often is fo very different from the computed one, that from the courfe of the latter no certain conclusion can, upon many occasions, be drawn concerning that of the former.

WUEN for a fum of money paid in England, containing, according to the flandard of the English mint, a certain number of ounces of

60

BOOK

IV.

of pure filver, you receive a bill for a fum of money to be paid in C H A P. France, containing, according to the ftandard of the French mint, an equal number of ounces of pure filver, exchange is faid to be at par between England and France. When you pay more, you are fuppofed to give a premium, and exchange is faid to be againft England, and in favour of France. When you pay lefs, you are fuppofed to get a premium, and exchange is faid to be againft France, and in favour of England.

BUT, first we cannot always judge of the value of the current money of different countries by the flandard of their respective mints. In fome it is more, in others it is lefs worn, clipt, and otherwife degenerated from that flandard. But the value of the current coin of every country, compared with that of any other country, is in proportion, not to the quantity of pure filver which it ought to contain, but to that which it actually does contain. Before the reformation of the filver coin in king William's time, exchange between England and Holland, computed, in the ufual manner, according to the flandard of their respective mints, was five and twenty per cent. against England. But the value of the current coin of England, as we learn from Mr. Lowndes, was at that time rather more than five and twenty per cent. below its flandard value. The real exchange, therefore, may even at that time have been in favour of England, notwithftanding the computed exchange was fo much against it; a smaller number of ounces of pure filver, actually paid in England, may have purchased a bill for a greater number of ounces of pure filver to be paid in Holland, and the man who was fuppofed to give, may in reality have got the premium. The French coin was, before the late reformation of the English gold coin, much lefs worn than the English, and was, perhaps, two or three per cent. nearer its flandard. If the computed exchange with France, therefore, was not more than two or three per cent. against England, BOOK IV.

England, the real exchange might have been in its favour. Since the reformation of the gold coin, the exchange has been conftantly in favour of England, and against France.

· SECONDLY, in some countries, the expense of coinage is defraved by the government, in others, it is defrayed by the private people who carry their bullion to the mint, and the government even derives fome revenue from the coinage. In England, it is defrayed by the government, and if you carry a pound weight of flandard filver to the mint, you get back fixty-two shillings, containing a pound weight of the like flandard filver. In France, a duty of eight per cent. is deducted for the coinage, which not only defrays the expence of it, but affords a finall revenue to the government. In England, as the coinage cofts nothing, the current coin can never be much more valuable than the quantity of bullion which it actually contains. In France, the workmanship as you pay for it, adds to the value, in the fame manner as to that of wrought plate. A fum of French money, therefore, containing a certain weight of pure filver, is more valuable than a fum of English money containing an equal weight of pure filver, and must require more bullion, or other commodities to purchase it. Though the current coin of the two countries, therefore, were equally near the flandards of their respective mints, a fum of English money could not well purchafe a fum of French money, containing an equal number of ounces of pure filver, nor confequently a bill upon France for fuch a fum. If for fuch a bill no more additional money was paid than what was fufficient to compenfate the expence of the French coinage, the real exchange might be at par between the two countries, their debts and credits might mutually compensate one another, while the computed exchange was confiderably in favour of France. If less than this was paid, the real exchange might be in favour of England, while the computed was in favour of France.

THIRDLY,

2

THIRDLY, and laftly, in fome places, as at Amfterdam, Hamburgh, Venice, &c. foreign bills of exchange are paid in what they call bank money; while in others, as at London, Lifbon, Antwerp, Leghorn, &c. they are paid in the common currency of the country. What is called bank money is always of more value than the fame nominal fum of common currency. A thoufand guilders in the bank of Amfterdam, for example, are of more value than a thousand guilders of Amsterdam currency. The difference between them is called the agio of the bank, which, at Amfterdam, is generally about five per cent. Supposing the current money of the two countries equally near to the flandard of their respective mints, and that the one pays foreign bills in this common currency, while the other pays them in bank money, it is evident that the computed exchange may be in favour of that which pays in bank money, though the real exchange should be in favour of that which pays in current money; for the fame reafon that the computed exchange may be in favour of that which pays in better money, or in money nearer to its own flandard, though the real exchange fhould be in favour of that which pays in worfe. The computed exchange, before the late reformation of the gold coin, was generally against London with Amfterdam, Hamburgh, Venice, and, I believe, with all other places which pay in what is called bank money. It will by no means follow, however, that the real exchange was against it. Since the reformation of the gold coin, it has been in favour of London even with those places. The computed exchange has generally been in favour of London with Lifbon, Antwerp, Leghorn, and, if you except France, I believe, with most other parts of Europe that pay in common currency; and it is not improbable that the real exchange was fo too.

.63

CHAP. III.

# Digreffion concerning Banks of Deposit, particularly concerning that of Amsterdam.

THE currency of a great flate, fuch as France or England, generally confifts almost entirely of its own coin. Should this currency, therefore, be at any time worn, clipt, or otherwife degraded below its flandard value, the flate by a reformation of its coin can effectually re-eftablish its currency. But the currency of a finall flate, fuch as Genoa or Hamburgh, can feldom confist altogether in its own coin, but must be made up, in a great meafure, of the coins of all the neighbouring flates with which its inhabitants have a continual intercourfe. Such a flate, therefore, by reforming its coin, will not always be able to reform its currency. If foreign bills of exchange are paid in this currency, the uncertain value of any fum, of what is in its own nature fo uncertain, must render the exchange always very much againft fuch a flate, its currency being, in all foreign flates, neceffarily valued even below what it is worth.

In order to remedy the inconvenience to which this difadvantageous exchange muft have fubjected their merchants, fuch fmall flates, when, they began to attend to the intereft of trade, have frequently enacted, that foreign bills of exchange of a certain value fhould be paid, not in common currency, but by an order upon, or by a transfer in the books of a certain bank, eftablifhed upon the credit, and under the protection of the flate; this bank being always obliged to pay, in good and true money, exactly according to the flandard of the flate. The banks of Venice, Genoa, Amfterfram, Hamburgh, and Nuremberg, feem to have been all originally eftablifhed with this view, though fome of them may have afterwards been made fubfervient to other purpofes. The money of fuch

ВООК

fuch banks being better than the common currency of the coun- C H A P. try, neceffarily bore an agio, which was greater or finaller, according as the currency was fuppofed to be more or lefs degraded below the flandard of the flate. The agio of the bank of Hamburgh, for example, which is faid to be commonly about fourteen per cent. is the fuppofed difference between the good flandard money of the flate, and the clipt, worn, and diminished currency poured into it from all the neighbouring states.

BEFORE 1609 the great quantity of clipt and worn foreign coin, which the extensive trade of Amsterdam brought from all parts of Europe, reduced the value of its currency about nine per cent. below that of good money fresh from the mint. Such money no fooner appeared than it was melted down or carried away, as it always is in fuch circumstances. The merchants, with plenty of currency, could not always find a fufficient quantity of good money to pay their bills of exchange; and the value of those bills, in spite of feveral regulations which were made to prevent it, became in a great measure uncertain.

In order to remedy these inconveniencies, a bank was established in 1600 under the guarantee of the city. This bank received both foreign coin, and the light and worn coin of the country at its real intrinfic value in the good flandard money of the country, deducting only fo much as was neceffary for defraying the expence of coinage, and the other neceffary expence of management. For the value which remained, after this fmall deduction was made, it gave a credit in its books. This credit was called bank money, which, as it reprefented money exactly according to the flandard of the mint, was always of the fame real value, and intrinfically worth more than current money. It was at the fame time enacted, that all bills drawn upon or negociated at Amfterdam of the value of K

Vol. II.

fix

fix hundred guilders and upwards fhould be paid in bank money, which at once took away all uncertainty in the value of those bills. Every merchant, in confequence of this regulation, was obliged to keep an account with the bank in order to pay his foreign bills of exchange, which neceffarily occasioned a certain demand for bank money.

BANK money, over and above both its intrinfic fuperiority to currency, and the additional value which this demand neceffarily gives it, has likewife fome other advantages. It is fecure from fire, robbery, and other accidents; the city of Amfterdam is bound for it; it can be paid away by a fimple transfer, without the trouble of counting, or the rifk of transporting it from one place to another. In confequence of those different advantages, it feems from the beginning to have borne an agio, and it is generally believed that all the money originally deposited in the bank was allowed to remain there, nobody caring to demand payment of a debt which he could fell for a premium in the market. By demanding payment of the bank, the owner of a bank credit would lofe this premium. As a fhilling fresh from the mint will buy no more goods in the market than one of our common worn shillings, fo the good and true money which might be brought from the coffers of the bank into those of a private perfon, being mixed and confounded with the common currency of the country, would be of no more value than that currency, from which it could no longer be readily diffinguished. While it remained in the coffers of the bank, its fuperiority was known and afcertained. When it had come into those of a private perfon, its fuperiority could not well be afcertained without more trouble than perhaps the difference was worth. By being brought from the coffers of the bank, befides, it loft all the other advantages of bank money; its fecurity, its eafy and fafe transferability, its ufe in paying foreign bills of exchange. Over and above all this, it could

66

BOOK

could not be brought from those coffers, as it will appear by and by, C H A P. without previously paying for the keeping.

THOSE deposits of coin, or those deposits which the bank was bound to reftore in coin, conflituted the original capital of the bank, or the whole value of what was reprefented by what is called bank money. At prefent they are supposed to constitute but a very small part of it. In order to facilitate the trade in bullion, the bank has been for these many years in the practice of giving credit in its books upon deposits of gold and filver bullion. This credit is generally about five per cent. below the mint price of fuch bullion. The bank grants at the fame time what is called a recipice or receipt, intitling the perfon who makes the deposit, or the bearer, to take out the bullion again at any time within fix months, upon re-transferring to the bank a quantity of bank money equal to that for which credit had been given in its books when the deposit was made, and upon paying one-fourth per cent. for the keeping. if the deposit was in filver; and one half per cent. if it was in gold; but at the fame time declaring, that in default of fuch payment, and upon the expiration of this term, the deposit should belong to the bank at the price at which it had been received, or for which credit had been given in the transfer books. What is thus paid for the keeping of the deposit may be confidered as a fort of warehouse rent; and why this warehouse rent should be fo much dearer for gold than for filver, feveral different reafons have been affigned. The fineness of gold, it has been faid, is more difficult to be afcertained than that of filver. Frauds are more eafily practifed, and occasion a greater loss in the more precious metal. Silver, befides, being the flandard metal, the flate, it has been faid, wifhes to encourage more the making of depofits of filver than of those of gold.

K 2

DEPOSITS

DEPOSITS of bullion are most commonly made when the price is fomewhat lower than ordinary; and they are taken out again when it happens to rife. In Holland the market price of bullion is generally above the mint price, for the fame reafon that it was fo in England before the late reformation of the gold coin. "The difference is faid to be commonly from about fix to fixteen flivers upon the mark, or eight ounces of filver of eleven parts fine, and one part alloy. The bank price, or the credit which the bank gives for deposits of fuch filver (when made in foreign coin, of which the fineness is well known and afcertained, fuch as Mexico dollars) is twenty-two guilders the mark; the mint price is about twenty-three guilders, and the market price is from twenty-three guilders fix, to twenty-three guilders fixteen flivers, or from two to three per cent. above the mint price \*. The proportions between the bank price, the mint price, and the market price of gold bullion, are nearly the fame. A perfon can generally fell his receipt for the difference between the mint price of bullion and the market price. A receipt for bullion is almost always worth fomething, and it very feldom happens therefore, that any body fuffers his receipt to expire, or allows his bullion to fall to the bank at the price at which it had been received, either by

\* The following are the prices at which the bank of Amfterdam at prefent (September, 1775) receives bullion and coin of different kinds.

Bar filver containing  $\frac{1}{12}$  fine filver 21 per mark, and in this proportion down to  $\frac{1}{2}$  fine, on which 5 guilders are given.

Fine bars, 23 per mark.

GOLD.

by not taking it out before the end of the fix months, or by neglecting to pay the one-fourth or one-half per cent. in order to obtain a new receipt for another fix months. This, however, though it happens feldom, is faid to happen fometimes, and more frequently with regard to gold than with regard to filver, on account of the higher warehoufe-rent which is paid for the keeping of the more precious metal.

THE perfon who by making a deposit of bullion obtains both a bank credit and a receipt, pays his bills of exchange as they become due with his bank credit; and either fells or keeps his receipt according as he judges that the price of bullion is likely to rife or to fall. The receipt and the bank credit feldom keep long together, and there is no occasion that they should. The perfon who has a receipt, and who wants to take out bullion, finds always plenty of bank credits, or bank money to buy at the ordinary price; and the perfon who has bank money, and wants to take out bullion, finds receipts always in equal abundance.

THE owners of bank credits and the holders of receipts conflitute two different forts of creditors against the bank. The holder of a receipt cannot draw out the bullion for which it is granted, without reaffigning to the bank a fum of bank money equal to the price at which the bullion had been received. If he

| GOLD.           |                   |
|-----------------|-------------------|
| Portugal coin   | 2                 |
| Guineas         | B-310 per mark.   |
| Louis d'ors new | 5                 |
| Ditto o'd       | 300.              |
| New ducats -    | 4 19.8 per ducat. |
|                 |                   |

Bar or ingot gold is received in proportion to its finencis compared with the above foreign gold coin. Upon fine bars the bank gives 340 per mark. In general, however, fomething more is given upon coin of a known finencis, than upon gold and filver bars, of which the finencis cannot be afcertained but by a proceis of melting and affaying.

4

has

EOOK. has no bank money of his own, he must purchase it of those who have it. The owner of bank money cannot draw out bul-\_\_\_\_\_ lion without producing to the bank receipts for the quantity which he wants. If he has none of his own, he must buy them of those who have them. The holder of a receipt, when he purchases bank money, purchases the power of taking out a quantity of bullion, of which the mint price is five per cent. above the bank price. The agio of five per cent. therefore, which he commonly pays for it, is paid, not for an imaginary, but for a real value. The owner of bank money, when he purchafes a receipt, purchafes the power of taking out a quantity of bullion of which the market price is commonly from two to three per cent. above the mint price. The price which he pays for it, therefore, is paid likewife for a real value. The price of the receipt, and the price of the bank money, compound or make up between them the full value or price of the bullion.

> UPON deposits of the coin current in the country, the bank grants receipts likewife as well as bank credits; but those receipts are frequently of no value, and will bring no price in the market. Upon ducatoons, for example, which in the currency pafs for three guilders three flivers each, the bank gives a credit of three guilders only, or five per cent. below their current value. It grants a receipt likewife intitling the bearer to take out the number of ducatoons deposited at any time within fix months, upon paying one-fourth per cent. for the keeping. This receipt will frequently bring no price in the market. Three guilders bank money generally fell in the market for three guilders three flivers, the full value of the ducatoons if they were taken out of the bank; and before they can be taken out, one-fourth per cent. must be paid for the keeping, which would be mere lofs to the holder of the receipt If the agio of the bank, however, should at any time fall to three per cent. fuch receipts might bring fome price in the market

70

IV.

market, and might fell for one and three-fourths per cent. But the agio of the bank being now generally about five per cent. fuch receipts are frequently allowed to expire, or as they express it, to fall to the bank. The receipts which are given for deposits of gold ducats fall to it yet more frequently, because a higher warehouse-rent, or one-half per cent. must be paid for the keeping of them before they can be taken out again. The five per cent. which the bank gains, when deposits either of coin or bullion are allowed to fall to it, may be confidered as the warehouse-rent for the perpetual keeping of fuch deposits.

THE fum of bank money for which the receipts are expired must be very confiderable. It must comprehend the whole original capital of the bank, which, it is generally fuppofed, has been allowed to remain there from the time it was first deposited, nobody caring either to renew his receipt or to take out his depolit. as, for the reasons already affigned, neither the one nor the other could be done without lofs. But whatever may be the amount of this fum, the proportion which it bears to the whole mass of bank money is fuppofed to be very finall. The bank of Amfterdam has for these many years past been the great warehouse of Europe for bullion, for which the receipts are very feldom allowed to expire, or, as they express it, to fall to the bank. The far greater part of the bank money, or of the credits upon the books of the bank, is fuppofed to have been created, for thefe many years paft, by fuch deposits which the dealers in bullion are continually both making and withdrawing.

No demand can be made upon the bank but by means of a recipice or receipt. The finaller mais of bank money, for which the receipts are expired, is mixed and confounded with the much greater mais for which they are still in force; fo that, though there may be a confiderable fum of bank money, for which there:

are:

CHAP.

are no receipts, there is no fpecific fum or portion of it, which may not at any time be demanded by one. The bank cannot be debtor to two perfons for the fame thing; and the owner of bank money who has no receipt cannot demand payment of the bank till he buys one. In ordinary and quiet times, he can find no difficulty in getting one to buy at the market price, which generally correfponds with the price at which he can fell the coin or bullion it intitles him to take out of the bank.

IT might be otherwife during a public calamity; an invafion, for example, fuch as that of the French in 1672. The owners of bank money being then all eager to draw it out of the bank, in order to have it in their own keeping, the demand for receipts might raife their price to an exorbitant height. The holders of them might form extravagant expectations, and, inftead of two or three per cent. demand half the bank money for which credit had been given upon the deposits that the receipts had respectively been granted for. The enemy, informed of the conflictution of the bank, might even buy them up in order to prevent the carrying away of the treafure. In fuch emergencies, the bank, it is fuppofed, would break through its ordinary rule of making payment only to the holders of receipts. The holders of receipts. who had no bank money, must have received within two or three per cent. of the value of the deposit for which their respective receipts had been granted. The bank, therefore, it is faid, would in this cafe make no fcruple of paying, either with money or bullion, the full value of what the owners of bank money who could get no receipts, were credited for in its books; paying at the fame time two or three per cent. to fuch holders of receipts as had no bank money, that being the whole value which in this flate of things could juftly be fuppofed due to them.

72

BOOK

EVEN

EVEN in ordinary and quiet times it is the intereft of the CHAP. holders of receipts to depress the agio, in order either to buy bank money (and confequently the bullion, which their receipts would then enable them to take out of the bank) fo much cheaper, or to fell their receipts to those who have bank money, and who want to take out bullion, fo much dearer; the price of a receipt being generally equal to the difference between the market price of bank money, and that of the coin or bullion for which the receipt had been granted. It is the intereft of the owners of bank money, on the contrary, to raife the agio, in order either to fell their bank money fo much dearer, or to buy a receipt fo To prevent the flock jobbing tricks which those much cheaper. opposite interests might fometimes occasion, the bank has of late years come to the refolution to fell at all times bank money for currency, at five per cent. agio, and to buy it in again at four per cent. agio. In confequence of this refolution, the agio can never either rife above five, or fink below four per cent. and the proportion between the market price of bank and that of current money, is kept at all times very near to the proportion between their intrinsic values. Before this resolution was taken, the market price of bank money used fometimes to rife fo high as nine per cent. agio, and fometimes to fink fo low as par, according as oppofite interefts happened to influence the market.

THE bank of Amfterdam profeffes to lend out no part of what is deposited with it, but, for every guilder for which it gives credit in its books, to keep in its repositories the value of a guilder either in money or bullion. That it keeps in its repositories all the money or bullion for which there are receipts in force, for which it is at all times liable to be called upon, and which, in reality, is continually going from it and returning to it again, cannot well be doubted. But whether it does fo likewife with regard to that part Vol. II.

of its capital, for which the receipts are long ago expired, for which in ordinary and quiet times it cannot be called upon, and which in reality is very likely to remain with it for ever, or as long as the States of the United Provinces fubfift, may perhaps appear more uncertain. At Amsterdam, however, no point of faith is better established than that for every guilder, circulated as bank money, there is a correspondent guilder in gold or filver to be found in the treasure of the bank. The city is guarantee that it should be The bank is under the direction of the four reigning burgofo. masters, who are changed every year. Each new fett of burgomafters vifits the freafure, compares it with the books, receives it upon oath, and delivers it over, with the fame awful folemnity, to the fett which fucceeds; and in that fober and religious country oaths are not yet difregarded. A rotation of this kind feems alone a fufficient fecurity against any practices which cannot be avowed. Amidft all the revolutions which faction has ever occafioned in the government of Amfterdam, the prevailing party has at no time accused their predecessors of infidelity in the administration of the bank. No acculation could have affected more deeply the reputation and fortune of the difgraced party, and if fuch an accufation could have been fupported, we may be affured that it would have been brought. In 1672, when the French king was at Utrecht, the bank of Amsterdam paid fo readily as left no doubt of the fidelity with which it had observed its engagements. Some of the pieces which were then brought from its repolitories appeared to. have been forched with the fire which happened in the town-houfe foon after the bank was established. Those pieces, therefore, must have lain there from that time.

WHAT may be the amount of the treasure in the bank is a queftion which has long employed the speculations of the curious. Nothing but conjecture can be offered concerning it. It is generally reckoned

74

BOOK

reckoned that there are about two thousand people who keep accounts with the bank, and allowing them to have, one with another, the value of fifteen hundred pounds sterling lying upon their respective accounts (a very large allowance), the whole quantity of bank money, and confequently of treasure in the bank, will amount to about three millions fterling, or, at eleven guilders the pound fterling, thirty-three millions of guilders; a great fum, and fufficient to carry on a very extensive circulation, but vaftly below the extravagant ideas which fome people have formed of this treafure.

THE city of Amsterdam derives a confiderable revenue from the bank. Befides what may be called the warehouse-rent above-mentioned, each perfon, upon first opening an account with the bank, pays a fee of ten guilders; and for every new account three guilders three flivers; for every transfer two flivers; and if the transfer is for lefs than three hundred guilders, fix flivers, in order to difcourage the multiplicity of fmall transactions. The perfon who neglects to balance his account twice in the year forfeits twenty-five The perfon who orders a transfer for more than is upon guilders. his account, is obliged to pay three per cent. for the fum overdrawn, and his order is fet afide into the bargain. The bank is supposed too to make a confiderable profit by the fale of the foreign coin or bullion which fometimes falls to it by the expiring of receipts, and which is always kept till it can be fold with advantage. It makes a profit likewife by felling bank money at five per cent. agio, and buying it in at four. These different emoluments amount to a good deal more than what is neceffary for paying the falaries of officers, and defraying the expence of management. What is paid for the keeping of bullion upon receipts, is alone fupposed to amount to a neat annual revenue of between one hundred and fifty thousand and two hundred thousand guilders. Public utility, however, and not revenue, was the original object of this inflitution.

L 2

75 СНАР.

III.

tion. Its object was to relieve the merchants from the inconvenience of a difadvantageous exchange. The revenue which has arifen from it was unforefeen, and may be confidered as accidental. But it is now time to return from this long digreffion, into which I have been infenfibly led in endeavouring to explain the reafons why the exchange between the countries which pay in what is called bank money, and thofe which pay in common currency, fhould generally appear to be in favour of the former, and againft the latter. The former pay in a fpecies of money of which the intrinfic value is always the fame, and exactly agreeable to the flandard of their refpective mints; the latter in a fpecies of money of which the intrinfic value is continually varying, and is almoft always more or lefs below that flandard.

# PART II.

# Of the Unreafonableness of those extraordinary Restraints upon other Principles.

**I**N the foregoing Part of this Chapter I have endeavoured to fhew, even upon the principles of the commercial fyftem, how unneceffary it is to lay extraordinary reftraints upon the importation of goods from those countries with which the balance of trade is fupposed to be difadvantageous.

NOTHING, however, can be more abfurd than this whole doctrine of the balance of trade, upon which, not only thefe refiraints, but almost all the other regulations of commerce are founded. When two places trade with one another, this doctrine fuppofes that, if the balance be even, neither of them either lofes or gains; but if it leans in any degree to one fide, that one of them lofes, and the other gains in proportion to its declension from the exact equilibrium. Both fuppolitions are falle. A trade which is forced by means

76

BOOK

means of bounties and monopolies, may be, and commonly is difadvantageous to the country in whole favour it is meant to be effablifhed, as I fhall endeavour to fhew hereafter. But that trade which, without force or confirmint, is naturally and regularly carried on between any two places, is always advantageous, though not always equally fo, to both.

By advantage or gain, I understand, not the increase of the quantity of gold and filver, but that of the exchangeable value of the annual produce of the land and labour of the country, or the increase of the annual revenue of its inhabitants.

IF the balance be even, and if the trade between the two places confift altogether in the exchange of their native commodities, they will, upon most occasions, not only both gain, but they will gain equally, or very near equally: each will in this cafe afford a market for a part of the furplus produce of the other: each will replace a capital which had been employed in raifing and preparing for the market this part of the furplus produce of the other, and which had been diffributed among, and given revenue and maintenance to a certain number of its inhabitants. Some part of the inhabitants of each therefore will indirectly derive their revenue and maintenance from the other. As the commodities exchanged too are fuppofed to be of equal value, fo the two capitals employed in the trade will, upon most occasions, be equal, or very nearly equal; and both being employed in raifing the native commodities of the two countries, the revenue and maintenance which their diftribution will afford to the inhabitants of each will be equal, or very nearly equal. This revenue and maintenance, thus mutually afforded, will be greater or fmaller in proportion to the extent of their dealings. If these should annually amount to an hundred thouland pounds, for example, or to a million on each fide, each of them

CHAP.

BOOK them would afford an annual revenue, in the one cafe, of an hundred thousand pounds, in the other, of a million, to the inhabitants of the other.

> IF their trade fhould be of fuch a nature that one of them exported to the other nothing but native commodities, while the returns of that other confifted altogether in foreign goods; the balance, in this cafe, would still be supposed even, commodities being paid They would, in this cafe too, both gain, for with commodities. but they would not gain equally; and the inhabitants of the country which exported nothing but native commodities would derive the greatest revenue from the trade. If England, for example, should import from France nothing but the native commodities of that country, and, not having fuch commodities of its own as were in demand there, fhould annually repay them by fending thither a large quantity of foreign goods, tobacco, we shall suppofe, and East India goods; this trade, though it would give fome revenue to the inhabitants of both countries, would give more to those of France than to those of England. The whole French capital annually employed in it would annually be diffributed among the people of France. But that part of the English capital only which was employed in producing the English commodities with which those foreign goods were purchased, would be annually diffributed among the people of England. The greater part of it would replace the capitals which had been employed in Virginia, Indoftan, and China, and which had given revenue and maintenance to the inhabitants of those distant countries. If the capitals were equal, or nearly equal, therefore, this employment of the French capital would augment much more the revenue of the people of France, than that of the English capital would the . revenue of the people of England. France would in this cafe carry on a direct foreign trade of confumption with England; whereas 3

78

whereas England would carry on a round-about trade of the fame CHAP. kind with France. The different effects of a capital employed in the direct, and of one employed in the round-about foreign trade of confumption, have already been fully explained.

THERE is not, probably, between any two countries, a trade which confifts altogether in the exchange either of native commodities on both fides, or of native commodities on one fide and of foreign goods on the other. Almost all countries exchange with one another partly native and partly foreign goods. That country, however, in whole cargoes there is the greatest proportion of native, and the leaft of foreign goods, will always be the principal gainer.

IF it was not with tobacco and East India goods, but with gold and filver, that England paid for the commodities annually imported from France, the balance, in this cafe, would be supposed uneven, commodities not being paid for with commodities, but with gold and filver. The trade, however, would, in this cafe, as in the foregoing, give fome revenue to the inhabitants of both countries, but more to those of France than to those of England. It would give fome revenue to those of England. The capital which had been 'employed in producing the English goods that purchased this gold and filver, the capital which had been diffributed among, and given revenue to certain inhabitants of England, would thereby be replaced, and enabled to continue that employment. The whole capital of England would no more be diminished by this exportation of gold and filver, than by the exportation of an equal value of any other goods. On the contrary, it would, in most cases, be augmented. No goods are fent abroad but those for which the demand is supposed to be greater abroad than at home, and of which the returns confequently, it is expected, ш.

BOOK ed, will be of more value at home than the commodities exported. If the tobacco which, in England, is worth only a hundred \_\_\_\_ thousand pounds, when fent to France will purchase wine which is, in England, worth a hundred and ten thousand pounds, the exchange will augment the capital of England by ten thousand pounds. If a hundred thousand pounds of English gold, in the fame manner, purchafe French wine which, in England, is worth a hundred and ten thousand, this exchange will equally augment the capital of England by ten thousand pounds. As a merchant who has a hundred and ten thousand pounds worth of wine in his cellar, is a richer man than he who has only a hundred thousand pounds worth of tobacco in his warehoufe, fo is he likewife a richer man than he who has only a hundred thousand pounds worth of gold in his coffers. He can put into motion a greater quantity of industry, and give revenue, maintenance, and employment, to a greater number of people than either of the other two. But the capital of the country is equal to the capitals of all its different inhabitants, and the quantity of industry which can be annually maintained in it, is equal to what all those different capitals can maintain. Both the capital of the country, therefore, and the quantity of industry which can be annually maintained in it, must generally be augmented by this exchange. It would, indeed, be more advantageous for England that it could purchase the wines of France with its own hardware and broad-cloth, than with either the tobacco of Virginia, or the gold and filver of Brazil and Peru. A direct foreign trade of confumption is always more advantageous than a round-about one. But a round-about foreign trade of confumption which is carried on with gold and filver, does not feem to be lefs advantageous than any other equally roundabout one. Neither is a country which has no mines more likely to be exhaufted of gold and filver by this annual exportation of those metals, than one which does not grow tobacco by the like annual

IV.

annual exportation of that plant. As a country which has where- C H A P. withal to buy tobacco will never be long in want of it, fo neither will one be long in want of gold and filver which has wherewithal to purchafe those metals.

IT is a lofing trade, it is faid, which a workman carries on with the alehoufe; and the trade which a manufacturing nation would naturally carry on with a wine country, may be confidered as a trade of the fame nature. I answer, that the trade with the alehoufe is not neceffarily a lofing trade. In its own nature it is just as advantageous as any other, though, perhaps, fomewhat more liable to be abufed. The employment of a brewer, and even that of a retailer of fermented liquors, are as neceffary divisions of labour as any other. It will generally be more advantageous for a workman to buy of the brewer the quantity he has occasion for than to make it himfelf, and if he is a poor workman, it will generally be more advantageous for him to buy it by little and little of the retailer, than a large quantity of the brewer. He may no doubt buy too much of either, as he may of any other dealers in his neighbourhood, of the butcher, if he is a glutton, or of the draper, if he affects to be a beau among his companions. It is advantageous to the great body of workmen notwithstanding, that all thefe trades fhould be free, though this freedom may be abufed in all of them, and is more likely to be fo, perhaps, in fome than in others. Though individuals, befides, may fometimes ruin their fortunes by an exceffive confumption of fermented liquors, there feems to be no rifk that a nation fhould do fo. Though in every country there are many people who fpend upon fuch liquors more than they can afford, there are always many more who fpend lefs. It deferves to be remarked too that, if we confult experience, the cheapnefs of wine feems to be a caule, not of drunkennefs, but VOL. II. Μ of

The inhabitants of the wine countries are in ge-BOOK of fobricty. IV. neral the foberest people in Europe; witness the Spaniards, the Italians, and the inhabitants of the fouthern provinces of France. People are feldom guilty of excess in what is their daily fare. Nobody affects the character of liberality and good fellowship, by being profuse of a liquor which is as cheap as small beer. On the contrary, in the countries which, either from exceffive heat or cold, produce no grapes, and where wine confequently is dear and a rarity, drunkennefs is a common vice, as among the northern nations, and all those who live between the tropics, the negroes, for example, on the coaft of Guinea. When a French regiment comes from fome of the northern provinces of France, where wine is fomewhat dear, to be guartered in the fouthern, where it is very cheap, the foldiers, I have frequently heard it obferved, are at first debauched by the cheapness and novelty of good wine; but after a few months refidence, the greater part of them become as fober as the reft of the inhabitants. Were the duties upon foreign wines, and the excifes upon malt, beer, and ale, to be taken away all at once, it might, in the fame manner, occasion in Great Britain a pretty general and temporary drunkennefs among the middling and inferior ranks of people, which would probably be foon followed by a permanent and almoft univerfal fobriety. At prefent drunkennefs is by no means the vice of people of fashion, or of those who can easily afford the most expenfive liquors. A gentleman drunk with ale, has fcarce ever been feen among us. The reftraints upon the wine trade in Great Britain befides, do not fo much feem calculated to hinder the people from going, if I may fay fo, to the alehoufe, as from going where they can buy the beft and cheapeft liquor. They favour the wine trade of Portugal, and discourage that of France. The Portuguese, it is faid, indeed, are better customers for our I manufactures

82

manufactures than the French, and fhould therefore be encouraged in preference to them. As they give us their cuftom, it is pretended, we fhould give them ours. The fneaking arts of underling tradefmen are thus erected into political maxims for the conduct of a great empire: for it is the moft underling tradefmen only who make it a rule to employ chiefly their own cuftomers. A great trader purchafes his goods always where they are cheapeft and beft, without regard to any little intereft of this kind.

By fuch maxims as thefe, however, nations have been taught that their interest confisted in beggaring all their neighbours. Each nation has been made to look with an invidious eye upon the prosperity of all the nations with which it trades, and to confider their gain as its own lofs. Commerce, which ought naturally to be, among nations, as among individuals, a bond of union and friendship, has become the most fertile fource of difcord and The capricious ambition of kings and ministers has animofity. not, during the prefent and the preceding century, been more fatal to the repose of Europe than the impertinent jealousy of merchants and manufacturers. The violence and injustice of the rulers of mankind is an ancient evil, for which, I am afraid, the nature of human affairs can scarce admit of a remedy. But the mean rapacity, the monopolizing fpirit of merchants and manufacturers, who neither are, nor ought to be the rulers of mankind, though it cannot perhaps be corrected, may very eafily be prevented from diffurbing the tranquillity of any body but themfelves.

THAT it was the fpirit of monopoly which originally both invented and propagated this doctrine, cannot be doubted; and they who first taught it were by no means fuch fools as they who be-M 2 lieved

BOOK

lieved it. In every country it always is and muft be the intereft of the great body of the people to buy whatever they want of those who fell it cheapeft. The proposition is fo very manifest, that it feems ridiculous to take any pains to prove it; nor could it ever have been called in queflion had not the interested fophistry of merchants and manufacturers confounded the common fense of mankind. Their interest is, in this respect, directly opposite to that of the great body of the people. As it is the interest of the freemen of a corporation to hinder the reft of the inhabitants from employing any workmen but themfelves, fo it is the interest of the merchants and manufacturers of every country to fecure to themfelves the monopoly of the home market. Hence in Great Britain and in most other European Countries the extraordinary duties upon almost all goods imported by alien merchants. Hence the high duties and prohibitions upon all those foreign manufactures which can come into competition with our own. Hence too the extraordinary reftraints upon the importation of almost all forts of goods from those countries with which the balance of trade is fuppoled to be diladvantageous; that is, from those against whom national animofity happens to be most violently inflamed.

> THE wealth of a neighbouring nation, however, though dangerous in war and politicks, is certainly advantageous in trade. In a ftate of hoftility it may enable our enemies to maintain fleets and armies fuperior to our own; but in a flate of peace and commerce it must likewife enable them to exchange with us to a greater value, and to afford a better market, either for the immediate produce of our own industry, or for whatever is purchased with that produce. As a rich man is likely to be a better cuftomer to the industrious people in his neighbourhood, than a poor, fo is likewife

84

likewife a rich nation. A rich man, indeed, who is himfelf a CHAP. manufacturer, is a very dangerous neighbour to all those who deal in the fame way. All the reft of the neighbourhood, however, by far the greatest number, profit by the good market which his expence affords them. They even profit by his underfelling the poorer workmen who deal in the fame way with him. The manufacturers of a rich nation, in the fame manner, may no doubt be very dangerous rivals to those of their neighbours. This very competition, however, is advantageous to the great body of the people, who profit greatly befides by the good market which the great expence of fuch a nation affords them in every other way. Private people who want to make a fortune, never think of retiring to the remote and poor provinces of the country, but refort either to the capital or to fome of the great commercial towns. They know, that where little wealth circulates there is little to be got, but that where a great deal is in motion, fome fhare of it may fall to them. The fame maxims which would in this manner direct the common fense of one, or ten, or twenty individuals, should regulate the judgment of one, or ten, or twenty millions, and fhould make a whole notion regard the riches of its neighbours, as a probable caufe and occafion for itself to acquire riches. A nation that would enrich itfelf by foreign trade is certainly most likely to do fo when its neighbours are all rich, industrious, and commercial nations. A great nation furrounded on all fides by wandering favages. and poor barbarians might, no doubt, acquire riches by the cultivation of its own lands, and by its own interior commerce, but not by foreign trade. It feems to have been in this manner that the ancient Egyptians and the modern Chinese acquired their great wealth. The ancient Egyptians, it is faid, neglected foreign commerce, and the modern Chinefe, it is known, hold it in the utmoft contempt, and fcarce deign to afford it the decent protection of the laws.

85

HI.

laws. The modern maxims of foreign commerce, by aiming at the impoverishment of all our neighbours, so far as they are capable of producing their intended effect, tend to render that very commerce infignificant and contemptible.

THERE is no commercial country in Europe of which the approaching ruin has not frequently been foretold by the pretended doctors of this fystem, from an unfavourable balance of After all the anxiety, however, which they have excited trade. about this, after all the vain attempts of almost all trading nations to turn that balance in their own favour and against their neighbours, it does not appear that any one nation in Europe has been in any refpect impoverished by this cause. Every town and country, on the contrary, in proportion as they have opened their ports to all nations; inftead of being ruined by this free trade, as the principles of the commercial fystem would lead us to expect, have been enriched by it. Though there are in Europe, indeed, a few towns which in fome respects deferve the name of free ports, there is no country which does fo. Holland, perhaps, approaches the nearest to this character of any, though still very remote from it; and Holland, it is acknowledged, not only derives its whole wealth, but a great part of its neceffary fublistence, from foreign trade.

THERE is another balance, indeed, which has already been explained, very different from the balance of trade, and which according as it happens to be either favourable or unfavourable, neceffarily occasions the prosperity or decay of every nation. This is the balance of the annual produce and confumption. If the exchangeable value of the annual produce, it has already been observed, exceeds that of the annual confumption, the capital of the

воок

IV.

the fociety muft annually increafe in proportion to this excefs. The fociety in this cafe lives within its revenue, and what is annually faved out of its revenue, is naturally added to its capital, and employed fo as to increafe ftill further the annual produce. If the exchangeable value of the annual produce, on the contrary, fall fhort of the annual confumption, the capital of the fociety muft annually decay in proportion to this deficiency. The expence of the fociety in this cafe exceeds its revenue, and neceffarily encroaches upon its capital. Its capital, therefore, muft neceffarily decay, and together with it, the exchangeable value of the annual produce of its induftry.

THIS balance of produce and confumption is entirely different from, what is called, the balance of trade. It might take place in a nation which had no foreign trade, but which was entirely feparated from all the world. It may take place in the whole globe of the earth, of which the wealth, population, and improvement may be either gradually increasing or gradually decaying.

THE balance of produce and confumption may be conflantly in favour of a nation, though what is called the balance of trade be generally againft it. A nation may import to a greater value than it exports for half a century, perhaps, together; the gold and filver which comes into it during all this time may be all immediately fent out of it; its circulating coin may gradually decay, different forts of paper money being fubfituted in its place, and even the debts too which it contracts in the principal nations with whom it deals, may be gradually increasing; and yet its real wealth, the exchangeable value of the annual produce of its lands and labour, may, during the fame period, have been increasing in a much greater proportion. The ftate of our North American colonies, and of the trade which they carried. 87

CHAP.

 B O O K IV.
 fent diffurbances, may ferve as a proof that this is by no means an impoffible fuppofition.

#### CHAP. IV.

# Of Drawbacks.

MERCHANTS and manufacturers are not contented with the monopoly of the home market, but defire likewife the most extensive foreign fale for their goods. Their country has no jurifdiction in foreign nations, and therefore can feldom procure them any monopoly there. They are generally obliged, therefore, to content themfelves with petitioning for certain encouragements to exportation.

OF thefe encouragements what are called Drawbacks feem to be the moft reafonable. To allow the merchant to draw back upon exportation, either the whole or a part of whatever excife or inland duty is impofed upon domeflick induftry, can never occasion the exportation of a greater quantity of goods than what would have been exported had no duty been impofed. Such encouragements do not tend to turn towards any particular employment a greater fhare of the capital of the country, than what would go to it of its own accord, but only to hinder the duty from driving away any part of that fhare to other employments. They tend not to overturn that balance which naturally eftablishes itself among all the various employments of the fociety; but to hinder it from being overturned by the duty. They tend not to deftroy, but but to preferve, what it is in most cafes advantageous to pre- CHAP. ferve, the natural division and distribution of labour in the fociety.

THE fame thing may be faid of the drawbacks upon the re-exportation of foreign goods imported; which in Great Britain generally amount to by much the largest part of the duty upon importation. Half the duties impofed by what is called the old fubfidy, are drawn back univerfally, except upon goods exported to the British Plantations; and frequently the whole, almost always a part, of those imposed by later fubfidies and imposts. Drawbacks were, perhaps, originally granted for the encouragement of the carrying trade, which, as the freight of the fhips is frequently paid by foreigners in money, was fuppofed to be peculiarly fitted for bringing gold and filver into the country. But though the carrying trade certainly deferves no peculiar encouragement, though the motive of the inflitution was, perhaps abundantly foolifh, the inflitution itself feems reafonable enough. Such drawbacks cannot force into this trade a greater fhare of the capital of the country than what would have gone to it of its own accord, had there been no duties upon importation. They only prevent its being excluded altogether by those duties. The carrying trade, though it deferves no preference, ought not to be precluded, but to be left free like all other trades. It is a neceffary refource for those capitals which cannot find employment either in the agriculture or in the manufactures of the country, either in its home trade or in its foreign trade of confumption.

The revenue of the cuftoms, inflead of fuffering, profits from fuch drawbacks, by that part of the duty which is retained. If the whole duties had been retained, the foreign goods upon which they

VOL. II.

N

------

are

are paid, could feldom have been exported, nor confequently imported, for want of a market. The duties, therefore, of which a part is retained, would never have been paid.

THESE reafons feem fufficiently to juftify drawbacks, and would juftify them, though the whole duties, whether upon the produce of domeflick induftry, or upon foreign goods, were always drawn back upon exportation. The revenue of excife would in this cafe, indeed, fuffer a little, and that of the cuftoms a good deal more; but the natural balance of induftry, the natural division and diffribution of labour, which is always more or lefs diffurbed by fuch duties, would be more nearly re-eftablished by fuch a regulation.

THESE reafons, however, will justify drawbacks only upon exporting goods to those countries which are altogether foreign and independent, not to those in which our merchants and manufacturers enjoy a monopoly. A drawback, for example, upon the exportation of European goods to our American colonies, will not always occasion a greater exportation than what would have taken place without it. By means of the monopoly which our merchants and manufacturers enjoy there, the fame quantity might frequently. perhaps, be fent thither, though the whole duties were retained. The drawback, therefore, may frequently be pure lofs to the revenue of excife and cuftoms, without altering the flate of the trade, or rendering it in any respect more extensive. How far such drawbacks can be juffified, as a proper encouragement to the industry of our colonies, or how far it is advantageous to the mother country, that they fhould be exempted from taxes which are paid by all the reft of their fellow fubjects, will appear hereafter when I come to treat of colonies.

DRAWBACKS,

DRAWBACKS, however, it must always be understood, are useful only in those cases in which the goods for the exportation of which they are given, are really exported to fome foreign country; and not clandestinely reimported into our own. That fome drawbacks, particularly those upon tobacco, have frequently been abused in this manner, and have given occasion to many frauds equally hurtful both to the revenue and to the fair trader, is well known.

## CHAP. V.

# Of Bounties.

**B**OUNTIES upon exportation are, in Great Britain, frequently petitioned for, and fometimes granted to the produce of particular branches of domeftick industry. By means of them our merchants and manufacturers, it is pretended, will be enabled to fell their goods as cheap or cheaper than their rivals in the foreign market. A greater quantity, it is faid, will thus be exported, and the balance of trade confequently turned more in favour of our own country. We cannot give our workmen a monopoly in the foreign, as we have done in the home market. We cannot force foreigners to buy their goods, as we have done our own countrymen. The next beft expedient, it has been thought, therefore, is to pay them for buying. It is in this manner that the mercantile fyftem proposes to enrich the whole country, and to put money into all our pockets by means of the balance of trade.

BOUNTIES,

91

CHAP.

ΕΟΟΚ IV.

BOUNTIES, it is allowed, ought to be given to those branches of trade only which cannot be carried on without them. But every branch of trade in which the merchant can fell his goods for a price which replaces to him, with the ordinary profits of flock, the whole capital employed in preparing and fending them to market, can be carried on without a bounty. Every fuch branch is cvidently upon a level with all the other branches of trade which are carried on without bounties, and cannot therefore require one more than they. Those trades only require bounties in which the merchant is obliged to fell his goods for a price which does not replace to him his capital, together with the ordinary profit; or in which he is obliged to fell them for lefs than it really cofts him to fend them to market. The bounty is given in order to make up this lofs, and to encourage him to continue, or perhaps to begin, a trade of which the expence is fuppofed to be greater than the returns, of which every operation eats up a part of the capital employed in it, and which is of fuch a nature, that, if all other trades refembled it, there would foon be no capital left in the country.

The trades, it is to be obferved, which are carried on by means of bounties, are the only ones which can be carried on between two nations for any confiderable time together, in fuch a manner as that one of them fhall always and regularly lofe, or fell its goods for lefs than it really cofts to fend them to market. But if the bounty did not repay to the merchant what he would otherwife lofe upon the price of his goods, his own intereft would foon oblige him to employ his flock in another way, or to find out a trade in which the price of the goods would replace to him, with the ordinary profit, the capital employed in fending them to market. The effect of bounties, like that of all the other expedients of the mercantile fyftem, can only be to force the trade of a country into a 7

92

channel much lefs advantageous than that in which it would natu- C H A P. rally run of its own accord.

THE ingenious and well informed author of the tracts upon the corn trade has fhown very clearly, that fince the bounty upon the exportation of corn was first established, the price of the corn exported, valued moderately enough, has exceeded that of the corn imported, valued very high, by a much greater fum than the amount of the whole bounties which have been paid during that period. This, he imagines, upon the true principles of the mercantile fyftem, is a clear proof that this forced corn trade is beneficial to the nation; the value of the exportation exceeding that of the importation by a much greater fum than the whole extraordinary expence which the publick has been at in order to get it exported. He does not confider that this extraordinary expence, or the bounty, is the fmalleft part of the expence which the exportation of corn really cofts the fociety. The capital which the farmer employed in raifing it must likewife be taken into the account. Unlefs the price of the corn when fold in the foreign markets replaces, not only the bounty, but this capital, together with the ordinary profits of flock, the fociety is a lofer by the difference, or the national flock is fo much diminished. But the very reason for which it has been thought neceffary to grant a bounty, is the fuppofed infufficiency of the price to do this.

THE average price of corn, it has been faid, has fallen confiderably fince the eftablishment of the bounty. That the average price of corn began to fall fomewhat towards the end of the laft century, and has continued to do fo during the course of the fixtyfour first years of the prefent, I have already endeavoured to show. But this event, fuppoling it to be as real as I believe it to be, muft have happened in fpite of the bounty, and cannot poffibly have happened in confequence of it.

93

IN

воок IV.

IN years of plenty, it has already been obferved, the bounty, by occafioning an extraordinary exportation, neceffarily keeps up the price of corn in the home market above what it would naturally fall to. To do fo was the avowed purpofe of the inftitution. In years of fearcity, though the bounty is frequently fulpended, yet the great exportation which it occafions in years of plenty, muft frequently hinder more or lefs the plenty of one year from relieving the fearcity of another. Both in years of plenty, and in years of fearcity, therefore, the bounty neceffarily tends to raife the money price of corn fomewhat higher than it otherwife would be in the home market.

THAT, in the actual flate of tillage, the bounty muft neceffarily have this tendency, will not, I apprehend, be diffuted by any reafonable perfon. But it has been thought by many people, that by fecuring to the farmer a better price than he could otherwife expect in the actual flate of tillage, it tends to encourage tillage; and that the confequent increase of corn may, in a long period of years, lower its price more than the bounty can raise it in the actual flate which tillage, may, at the end of that period, happen to be in.

I ANSWER, that this might be the cafe if the effect of the bounty was to raife the real price of corn, or to enable the farmer with an equal quantity of it to maintain a greater number of labourers in the fame manner, whether liberal, moderate, or fcanty, that other labourers are commonly maintained in his neighbourhood. But neither the bounty, it is evident, nor any other human inflitution, can have any fuch effect. It is not the real, but the nominal price of corn only, which can be at all affected by the bounty.

THE real effect of the bounty is not fo much to raife the real value of corn, as to degrade the real value of filver; or to make an equal quantity of it exchange for a fmaller quantity, not only of corn,

94

corn, but of all other commodities: for the money price of corn C H A P. regulates that of all other commodities.

IT regulates the money price of labour, which must always be fuch as to enable the labourer to purchase a quantity of corn sufficient to maintain him and his family either in the liberal, moderate, or scanty manner in which the advancing, stationary or declining circumstances of the society oblige his employers to maintain him.

IT regulates the money price of all the other parts of the rude produce of land, which, in every period of improvement, muft bear a certain proportion to that of corn, though this proportion is different in different periods. It regulates, for example, the money price of grafs and hay, of butcher's meat, of horfes, and the maintenance of horfes, of land carriage confequently, or of the greater part of the inland commerce of the country.

By regulating the money price of all the other parts of the rude produce of land, it regulates that of the materials of all manufactures. By regulating the money price of labour, it regulates that of manufacturing art and industry. And by regulating both, it regulates that of the complete manufacture. The money price of labour, and of every thing that is the produce either of land or labour, must neceffarily either rife or fall in proportion to the money price of corn.

THOUGH in confequence of the bounty, therefore, the farmer fhould be enabled to fell his corn for four fhillings the bufhel inftead of three and fixpence, and to pay his landlord a money rent proportionable to this rife in the money price of his produce; yet, if in confequence of this rife in the price of corn, four fhillings will purchase no more goods of any other kind than three and fix-

8

pence

95

BOOK pence would have done before, neither the circumftances of the IV. farmer, nor those of the landlord, will be in the smallest degree mended by this change. The farmer will not be able to cultivate better: the landlord will not be able to live better.

> THAT degradation in the value of filver which is the effect of the fertility of the mines, and which operates equally, or very near equally, through the greater part of the commercial world, is a matter of very little confequence to any particular country. The confequent rife of all money prices, though it does not make those who receive them really richer, does not make them really poorer. A fervice of plate becomes really cheaper, and every thing elfe remains precifely of the fame real value as before.

> BUT that degradation in the value of filver which, being the effect either of the peculiar fituation, or of the political infitutions of a particular country, takes place only in that country, is a matter of very great confequence, which, far from tending to make any body really richer, tends to make every body really poorer. The rife in the money price of all commodities, which is in this cafe peculiar to that country, tends to difcourage more or lefs every fort of induftry which is carried on within it, and to enable foreign nations, by furnifhing almost all forts of goods for a fmaller quantity of filver than its own workmen can afford to do, to underfell them, not only in the foreign, but even in the home market.

> It is the peculiar fituation of Spain and Portugal as proprietors of the mines, to be the diffributors of gold and filver to all the other countries of Europe. Those metals ought naturally, therefore, to be fomewhat cheaper in Spain and Portugal than in any other part of Europe. The difference, however, fhould be no more

more than the amount of the freight and infurance; and, on ac- C H A P. count of the great value and fmall bulk of those metals, their of freight is no great matter, and their infurance is the fame as that of any other goods of equal value. Spain and Portugal, therefore, could fuffer very little from their peculiar fituation, if they did not aggravate its difadvantages by their political inftitutions.

SPAIN by taxing, and Portugal by prohibiting the exportation of gold and filver, load that exportation with the expence of fmuggling, and raife the value of those metals in other countries fo much more above what it is in their own, by the whole amount of this expence. When you dam up a ftream of water, as foon as the dam is full, as much water must run over the dam-head as if there was no dam at all. The prohibition of exportation cannot detain a greater quantity of gold and filver in Spain and Portugal than what they can afford to employ, than what the annual produce of their land and labour will allow them to employ, in coin, plate, gilding, and other ornaments of gold and filver. When they have got this quantity the dam is full, and the whole fiream which flows in afterwards must run over. The annual exportation of gold and filver from Spain and Portugal accordingly is, by all accounts, notwithstanding these restraints, very near equal to the whole annual importation. As the water, however, must always be deeper behind the dam-head than before it, fo the quantity of gold and filver which thefe reftraints detain in Spain and Portugal must, in proportion to the annual produce of their land and labour, be greater than what is to be found in other countries. The higher and ftronger the dam-head, the greater must be the difference in the depth of water behind and before it. The higher the tax, the higher the penalties with which the prohibition is guarded, the more vigilant and fevere the police which looks after the execution of the law, the greater must be the difference in the VOL. II. 0 propor-

BOOK proportion of gold and filver to the annual produce of the land and labour of Spain and Portugal, and to that of other countries. It is faid accordingly to be very confiderable, and that you frequently find there a profusion of plate in houses, where there is nothing elfe which would, in other countries, be thought fuitable or correspondent to this fort of magnificence. The cheapnels of gold and filver, or what is the fame thing, the dearnefs of all commodities, which is the necessary effect of this redundancy of the precious metals, difcourages both the agriculture and manufactures of Spain and Portugal, and enables foreign nations to fupply them with many forts of rude, and with almost all forts of manufactured produce, for a fmaller quantity of gold and filver than what they themselves can either raise or make them for at home. The tax and prohibition operate in two different ways. They not only lower very much the value of the precious metals in Spain and Portugal, but by detaining there a certain quantity of those metals which would otherwife flow over other countries, they keep up their value in those other countries fomewhat above what it otherwife would be, and thereby give those countries a double advantage in their commerce with Spain and Portugal. Open the floodgates and there will prefently be lefs water above, and more below, the dam-head, and it will foon come to a level in both places. Remove the tax and the prohibition, and as the quantity of gold and filver will diminish confiderably in Spain and Portugal, fo it will increase fomewhat in other countries, and the value of those metals, their proportion to the annual produce of land and labour, will foon come to a level, or very near to a level, in all. The lofs which Spain and Portugal could fuftain by this exportation of their gold and filver would be altogether nominal and imaginary. The nominal value of their goods, and of the annual produce of their land and labour would fall, and would be expressed or represented by a fmaller quantity of filver than before: but their real value would be 9

be the fame as before, and would be fufficient to maintain, command, and employ, the fame quantity of fabour. As the nominal value of their goods would fall, the real value of what remained of their gold and filver would rife, and a fmaller quantity of those metals would answer all the same purposes of commerce and circulation which had employed a greater quantity before. The gold and filver which would go abroad would not go abroad for nothing, but would bring back an equal value of goods of fome kind or another. Those goods too would not be all matters of mere luxury and expence, to be confumed by idle people who produce nothing in return for their confumption. As the real wealth and revenue of idle people would not be augmented by this extraordinary exportation of gold and filver, fo neither would their confumption be much augmented by it. Those goods would, probably, the greater part of them, and certainly fome part of them, confift in materials, tools, and provisions, for the employment and maintenance of industrious people, who would reproduce, with a profit, the full value of their confumption. A part of the dead flock of the fociety would thus be turned into active flock, and would put into motion a greater quantity of industry than had been employed before. The annual produce of their land and labour would immediately be augmented a little, and in a few years would, probably, be augmented a great deal; their industry being thus relieved from one of the most oppressive burdens which it at prefent labours under.

THE bounty upon the exportation of corn neceffarily operates exactly in the fame way as this abfurd policy of Spain and Portugal. Whatever be the actual flate of tillage, it renders our corn fomewhat dearer in the home market than it otherwife would be in that flate, and fomewhat cheaper in the foreign; and as the average money price of corn regulates more or lefs that of

O a

99

CHAP.

all

**BOOK** IV. all other commodities, it lowers the value of filver confiderably in the one, and tends to raife it a little in the other. It enables foreigners, the Dutch in particular, not only to eat our corn cheaper than they otherwife could do, but fometimes to eat it cheaper than even our own people can do upon the fame occafions; as we are affured by an excellent authority, that of Sir Matthew Decker. It hinders our own workmen from furnifhing their goods for fo finall a quantity of filver as they otherwife might do; and enables the Dutch to furnifh their's for a fmaller. It tends to render our manufactures fomewhat dearer in every market, and their's fomewhat cheaper than they otherwife would be, and confequently to give their induftry a double advantage over our own.

> THE bounty, as it raifes in the home market, not the real, but only the nominal price of our corn, as it augments, not the quantity of labour which a certain quantity of corn can maintain and employ, but only the quantity of filver which it will exchange for, it difcourages our manufactures without rendering the fmalleft real fervice either to our farmers or country gentlemen. It puts, indeed, a little more money into the pockets of both, and it will perhaps be fomewhat difficult to perfuade the greater part of them that this is not rendering them a very real fervice. But if this money finks in its value, in the quantity of labour, provifions, and commodities of all different kinds which it is capable of purchafing, as much as it rifes in its quantity, the fervice will be merely nominal and imaginary.

> THERE is, perhaps, but one fet of men in the whole commonwealth to whom the bounty either was or could be really ferviceable. Thefe were the corn merchants, the exporters and importers of corn. In years of plenty the bounty neceffarily occafioned

occafioned a greater exportation than would otherwife have taken C H A P. place; and by hindering the plenty of one year from relieving the fcarcity of another, it occafioned in years of fcarcity a greater importation than would otherwife have been neceffary. It increafed the bufinefs of the corn merchant in both, and in years of fcarcity, it not only enabled him to import a greater quantity, but to fell it for a better price, and confequently with a greater profit than he could otherwife have made, if the plenty of one year had not been more or lefs hindered from relieving the fcarcity of another. It is in this fet of men, accordingly, that I have obferved the greateft zeal for the continuance or renewal of the bounty.

OUR country gentlemen, when they imposed the high duties upon the importation of foreign corn, which in times of moderate plenty amount to a prohibition, and when they eftablished' the bounty, feem to have imitated the conduct of our manufacturers. By the one inflitution, they fecured to themfelves the monopoly of the home market, and by the other they endeavoured to prevent that market from ever being overflocked with their commodity. By both they endeavoured to raife its real value, in the fame manner as our manufacturers had, by the like inflitutions, raifed the real value of many different forts of manufactured goods. They did not perhaps attend to the great and effential difference which nature has established between corn and almost every other fort of When either by the monopoly of the home market, or goods. by a bounty upon exportation, you enable our woollen or linen manufacturers to fell their goods for fomewhat a better price than they otherwife could get for them, you raife, not only the nominal, but the real price of those goods. You render them equivalent to a greater quantity of labour and fublistence, you encrease not only the nominal, but the real profit, the real wealth and revenue

BOOK revenue of those manufacturers, and you enable them either to live better themselves, or to employ a greater quantity of labour in those particular manufactures. You really encourage those manufactures, and direct towards them a greater quantity of the industry of the country, than what would probably go to them of its own accord. But when by the like inflitutions you raife the nominal or money-price of corn, you do not raife its real value. You do not increase the real wealth, the real revenue either of our farmers or country gentlemen. You do not encourage the growth of corn, becaufe you do not enable them to maintain and employ more labourers in raifing it. The nature of things has flamped upon corn a real value which cannot be altered by merely altering its money price. No bounty upon exportation, no monopoly of the home market can raife that value. The freeft competition cannot lower it. Through the world in general that value is equal to the quantity of labour which it can maintain, and in every particular place it is equal to the quantity of labour which it can maintain in the way, whether liberal, moderate, or fcanty, in which labour is commonly maintained in that place. Woollen or linen cloth are not the regulating commodities by which the real value of all other commodities must be finally measured and determined. Corn is. The real value of every other commodity is finally meafured and determined by the proportion which its average money price bears to the average money price of corn. The real value of corn does not vary with those variations in its average money price, which fometimes occur from one century to another. It is the real value of filver which varies with them.

> BOUNTIES upon the exportation of any home-made commodity are liable, first, to that general objection which may be made to all the different expedients of the mercantile fystem; the objection of forcing fome part of the industry of the country into a channel lefs

lefs advantageous than that in which it would run of its own accord: and, fecondly, to the particular objection of forcing it, not only into a channel that is lefs advantageous, but into one that is actually difadvantageous; the trade which cannot be carried on but by means of a bounty being neceffarily a lofing trade. The bounty upon the exportation of corn is liable to this further objection, that it can in no respect promote the raising of that particular commodity of which it was meant to encourage the production. When our country gentlemen, therefore, demanded the effablifhment of the bounty, though they acted in imitation of our merchants and manufacturers, they did not act with that compleat comprehension of their own interest which commonly directs the conduct of those two other orders of people. They loaded the public revenue with a very confiderable expence; but they did not in any respect increase the real value of their own commodity, and by lowering fomewhat the real value of filver they difcouraged in fome degree the general industry of the country, and instead of advancing, retarded more or lefs the improvement of their own. lands, which neceffarily depends upon the general industry of the country.

To encourage the production of any commodity, a bounty upon production, one fhould imagine, would have a more direct operation than one upon exportation. It has, however, been more rarely granted. The prejudices eftablifhed by the commercial fyftem have taught us to believe that national wealth arifes more immediately from exportation than from production. It has been more favoured accordingly, as the more immediate means of bringing money into the country. Bounties upon production, it has been faid too, have been found by experience more liable to frauds than those upon exportation. How far this is true, I know not. That bounties upon exportation have been abufed to many fraudulent

CHAP.

L-----

BOOK fraudulent purpofes, is very well known. But it is not the intereft of merchants and manufacturers, the great inventors of all these expedients, that the home market should be overstocked with their goods, an event which a bounty upon production might fometimes occafion. A bounty upon exportation, by enabling them to fend abroad the furplus part, and to keep up the price of what remains in the home market, effectually prevents this. Of all the expedients of the mercantile fystem, accordingly, it is the one of which they are the fondest. I have known the different undertakers of fome particular works agree privately among themfelves to give a bounty out of their own pockets upon the exportation of a certain proportion of the goods which they dealt in. This expedient fucceeded fo well that it more than doubled the price of their goods in the home market, notwithftanding a very confiderable increase in the produce. The operation of the bounty upon corn must have been wonderfully different, if it has lowered the money price of that commodity.

> SOMETHING like a bounty upon production, however, has been granted upon fome particular occafions. The encouragements given to the white-herring and whale-fifheries may, perhaps, be confidered as fomewhat of this nature. They tend directly to render the goods cheaper in the home market than they otherwife would be in the actual flate of production. In other refpects their effects are the fame as those of bounties upon exportation. By means of them a part of the capital of the country is employed in bringing goods to market, of which the price does not repay the cost, together with the ordinary profits of flock. But though the bounties to those fisheries do not contribute to the opulence of the nation, they may perhaps be defended as conducing to its defence, by augmenting the number of its failors and fhipping. This may frequently be done by means of fuch bounties,

bounties, at a much finaller expense than by keeping up a great C H A P. ftanding navy, if I may use such an expression, in time of peace, in the fame manner as a ftanding army.

Some other bounties may be vindicated perhaps upon the fame principle. It is of importance that the kingdom fhould depend as little as poffible upon its neighbours for the manufactures neceffary for its defence; and if thefe cannot otherwife be maintained at home, it is reafonable that all other branches of industry fhould be taxed in order to fupport them. The bounties upon the importation of naval stores from America, upon British made fail-cloth, and upon British made gunpowder, may perhaps all three be vindicated upon this principle. The first is a bounty upon the production of America, for the use of Great Britain. The two others are bounties upon exportation.

WHAT is called a bounty is fometimes no more than a drawback, and confequently is not liable to the fame objections as what is properly a bounty. The bounty, for example, upon refined fugar exported may be confidered as a drawback of the duties upon the brown and mufcovado fugars, from which it is made. The bounty upon wrought filk exported, a drawback of the duties upon raw and thrown filk imported. The bounty upon gunpowder exported, a drawback of the duties upon brimftone and faltpetre imported. In the language of the cuftoms those allowances only are called drawbacks, which are given upon goods exported in the fame form in which they are imported. When that form has been altered by manufacture of any kind, they are called bounties.

PREMIUMS given by the publick to artifts and manufacturers who excel in their particular occupations, are not liable to the fame objections as bounties. By encouraging extraordinary dexterity and ingentity, they ferve to keep up the emulation of the Vot U, P workmen

BOOK workmen actually employed in those respective occupations, and are not confiderable enough to turn towards any one of them a greater fhare of the capital of the country than what would go to it of its own accord. Their tendency is not to overturn the natural balance of employments, but to render the work which is done in each as perfect and compleat as poffible. The expence of premiums, befides, is very trifling; that of bounties very great. The bounty upon corn alone has fometimes coft the publick in one year, more than three hundred thousand pounds.

> BOUNTIES are fometimes called premiums, as drawbacks are fometimes called bounties. But we must in all cases attend to the nature of the thing, without paying any regard to the word.

# Digression concerning the Corn Trade and Corn Laws.

T CANNOT conclude this chapter concerning bounties, without obferving that the praifes which have been beftowed upon the law which establishes the bounty upon the exportation of corn and upon that fyftem of regulations which is connected with it, are altogether unmerited. A particular examination of the nature of the corn trade, and of the principal British laws which relate to it, will sufficiently demonstrate the truth of this affertion. The great importance of this fubject must justify the length of the digression.

THE trade of the corn merchant is composed of four different branches, which, though they may fometimes be all carried on by the fame perfon, are in their own nature four feparate and diffin & ' trades. These are, first, the trade of the inland dealer; fecondly, that of the merchant importer for home confumption; thirdly, that of the merchant exporter of home produce for foreign confumption; and, fourthly, that of the merchant carrier, or of the importer of corn in order to export it again.

I. THE

I. THE interest of the inland dealer, and that of the great body C H A P. of the people, how opposite foever they may at first fight appear, are, even in years of the greatest fcarcity, exactly the fame. It is his intereft to raife the price of his corn as high as the real fcarcity of the feafon requires, and it can never be his interest to raife it higher. By raifing the price he difcourages the confumption, and puts every body more or lefs, but particularly the inferior ranks of people, upon thrift and good management. If, by raifing it too high, he difcourages the confumption fo much that the fupply of the feafon is likely to go beyond the confumption of the feafon, and to last for fome time after the next crop begins to come in, he runs the hazard, not only of lofing a confiderable part of his corn by natural caufes, but of being obliged to fell what remains of it for much lefs than what he might have had for it feveral months before. If by not raifing the price high enough he difcourages the confumption fo little, that the fupply of the feafon is likely to fall thort of the confumption of the feafon, he not only lofes a part of the profit which he might otherwife have made, but he exposes the people to fuffer before the end of the feafon, inftead of the hardships of a dearth, the dreadful horrors of a famine. It is the interest of the people that their daily, weekly, and monthly confumption, fhould be proportioned as exactly as poffible to the fupply of the feafon. The intereft of the inland corn dealer is the fame. By fupplying them, as nearly as he can judge, in this proportion, he is likely to fell all his corn for the higheft price, and with the greateft profit; and his knowledge of the ftate of the crop, and of his daily, weekly, and monthly fales, enable him to judge, with more or lefs accuracy, how far they really are fupplied in this manner. Without intending the intereft of the people, he is neceffarily led, by a regard to his own intereft, to treat them, even in years of fcarcity, pretty much in the fame manner as the prudent master of a vessel is fometimes obliged to treat his crew. When

1.7

~~

he

P 2

he forefees that provisions are likely to run short, he puts them upon fhort allowance. Though from excess of caution he should fometimes do this without any real neceffity, yet all the inconveniencies which his crew can thereby fuffer are inconfiderable in comparifon of the danger, mifery, and ruin, to which they might fometimes be exposed by a lefs provident conduct. Though from excess of avarice, in the same manner, the inland corn merchant should fometimes raife the price of his corn fomewhat higher than the fcarcity of the feafon requires, yet all the inconveniencies which the people can fuffer from this conduct, which effectually fecures them from a famine in the end of the feafon, are inconfiderable in comparison of what they might have been exposed to by a more liberal way of dealing in the beginning of it. The corn merchant himfelf is likely to fuffer the most by this excess of avarice; not only from the indignation which it generally excites against him, but, though he should escape the effects of this indignation, from the quantity of corn which it neceffarily leaves upon his hands in the end of the feafon, and which, if the next feafon happens to prove favourable, he must always fell for a much lower price than he might otherwife have had.

WERE it poffible, indeed, for one great company of merchants to poffefs themfelves of the whole crop of an extensive country, it might, perhaps, be their intereft to deal with it as the Dutch are faid to do with the fpiceries of the Molluccas, to deftroy or throw away a confiderable part of it, in order to keep up the price of the reft. But it is fearce poffible, even by the violence of law, to eftablifh fuch an extensive monopoly with regard to corn; and, whereever the law leaves the trade free, it is of all commodities the leaft liable to be engroffed or monopolifed by the force of a few large capitals, which buy up the greater part of it. Not only its value far exceeds what the capitals of a few private men are capable of purchafing,

108

воок

purchaling, but, fuppofing they were capable of purchaling it, the CHAP. manner in which it is produced renders this purchase altogether impracticable. As in every civilized country it is the commodity of which the annual confumption is the greateft, fo a greater quantity of industry is annually employed in producing corn than in producing any other commodity. When it first comes from the ground too, it is neceffarily divided among a greater number of owners than any other commodity; and thefe owners can never be collected into one place like a number of independent manufacturers, but are neceffarily fcattered through all the different corners of the country. These first owners either immediately supply the confumers in their own neighbourhood, or they fupply other inland dealers who fupply those confumers. The inland dealers in corn, therefore, including both the farmer and the baker, are neceffarily more numerous than the dealers in any other commodity, and their difperfed fituation renders it altogether impoffible for them to enter into any general combination. If in a year of fcarcity therefore, any of them should find that he had a good deal more corn upon hand than, at the current price, he could hope to difpofe of before the end of the feafon, he would never think of keeping up this price to his own lofs, and to the fole benefit of his rivals and competitors, but would immediately lower it, in order to get rid of his corn before the new crop began to come in. The fame motives, the fame interefts, which would thus regulate the conduct of any one dealer, would regulate that of every other, and oblige them all in general to fell their corn at the price which, according to the beft of their judgment, was most fuitable to the fearcity or plenty of the feafon.

WHOEVER examines, with attention, the hiftory of the dearths and famines which have afflicted any part of Europe, during either the course of the present or that of the two preceding centuries, of

,

BOOK W.

of feveral of which we have pretty exact accounts, will find, I believe, that a dearth never has arifen from any combination among the inland dealers in corn, nor from any other caufe but a real fearcity, occafioned fometimes, perhaps, and in fome particular places, by the wafte of war, but in by far the greatest number of cafes, by the fault of the feafons; and that a famine has never arifen from any other caufe but the violence of government attempting, by improper means, to remedy the inconveniencies of a dearth.

In an extensive corn country, between all the different parts of which there is a free commerce and communication, the fcarcity occafioned by the most unfavourable feasons can never be fo great as to produce a famine; and the tcantieft crop, if managed with frugality and œconomy, will maintain, through the year, the fame number of people that are commonly fed in a more affluent manner by one of moderate plenty. The feafons most unfavourable to the crop are those of exceffive drought or exceffive rain. But, as corn grows equally upon high and low lands, upon grounds that are difpoled to be too wet, and upon those that are difpoled to be too dry, either the drought or the rain which is hurtful to one part of the country is favourable to another; and though both in the wet and in the dry feafon the crop is a good deal lefs than in one more properly tempered, yet in both what is loft in one part of the country is in fome meafure compenfated by what is gained in the other. In rice countries, where the crop not only requires a very moift foil, but where in a certain period of its growing it muft be laid under water, the effects of a drought are much more difmal. Even in fuch countries, however, the drought is, perhaps, fcarce ever fo univerfal as neceffarily to occasion a famine, if the government would allow a free trade. The drought in Bengal, a few years ago, might probably have occafioned a very great dearth. Some improper regulations, fome injudicious reftraints impofed by • the

IIO

the fervants of the Eaft India Company upon the rice trade, contri- C H A P. buted, perhaps, to turn that dearth into a famine.

WHEN the government, in order to remedy the inconveniencies of a dearth, orders all the dealers to fell their corn at what it fuppoles a realonable price, it either hinders them from bringing it to market, which may fometimes produce a famine even in the beginning of the fealon; or if they bring it thither, it enables the people, and thereby encourages them to confume it fo faft, as mult neceflarily produce a famine before the end of the fealon. The unlimited, unreftrained freedom of the corn trade, as it is the only effectual preventative of the miferies of a famine, fo it is the beft palliative of the inconveniencies of a dearth; for the inconveniencies of a real fearcity cannot be remedied; they can only be palliated. No trade deferves more the full protection of the law, and no trade requires it fo much; becaufe no trade is fo much expofed to popular odium.

In years of fcarcity the inferior ranks of people impute their diffrefs to the avarice of the corn merchant, who becomes the object of their hatred and indignation. Inftead of making profit upon fuch occafions, therefore, he is often in danger of being utterly ruined, and of having his magazines plundered and deftroyed by their violence. It is in years of fcarcity, however, when prices are high, that the corn merchant expects to make his principal profit. He is generally in contract with fome farmers to furnifh him for a certain number of years with a certain quantity of corn at a certain price. This contract price is fettled according to what is fuppofed to be the moderate and reafonable, that is, the ordinary or average price, which, before the late years of fcarcity, was commonly about eight and twenty fhillings for the quarter of wheat, and for that of other grain in proportion. In III

~

BOOK In years of fcarcity, therefore, the corn merchant buys a great part of his corn for the ordinary price, and fells it for a much higher. That this extraordinary profit, however, is no more than fufficient to put his trade upon a fair level with other trades, and to compenfate the many loffes which he fuffains upon other occafions, both from the perifhable nature of the commodity itfelf, and from the frequent and unforeseen fluctuations of its price, seems evident enough, from this fingle circumstance, that great fortunes are as feldom made in this as in any other trade. The popular odium, however, which attends it in years of fcarcity, the only years in which it can be very profitable, renders people of character and fortune averse to enter into it. It is abandoned to an inferior sett of dealers; and millers, bakers, mealmen, and meal factors, together with a number of wretched huckfters, are almost the only middle people that, in the home market, come between the grower and the confumer.

> THE ancient policy of Europe, initead of discountenancing this popular odium against a trade fo beneficial to the publick, feems, on the contrary, to have authorifed and encouraged it.

> By the 5th and 6th of Edward VI. cap. 14. it was enacted, That whoever should buy any corn or grain with intent to fell it again, should be reputed an unlawful engrofier, and should, for the first fault, fuffer two months imprisonment, and forfeit the value of the corn; for the fecond, fuffer fix months imprifonment, and forfeit double the value; and for the third, be fet in the pillory, fuffer imprifonment during the king's pleafure, and forfeit all his goods and chattels. The ancient policy of most other parts of Europe was no better than that of England.

> > OUR

OUR anceftors feem to have imagined that the people would CHAP. buy their corn cheaper of the farmer than of the corn merchant, who, they were afraid, would require, over and above the price which he paid to the farmer, an exorbitant profit to himfelf. They endeavoured, therefore, to annihilate his trade altogether. They even endeavoured to hinder as much as possible any middle man of any kind from coming in between the grower and the confumer; and this was the meaning of the many reftraints which they imposed upon the trade of those whom they called kidders or carriers of corn, a trade which nobody was allowed to exercife without a licence ascertaining his qualifications as a man of probity and fair dealing. The authority of three juffices of the peace was, by the flatute of Edward VI. neceffary, in order to grant this licence. But even this reftraint was afterwards thought infufficient, and by a flatute of Elizabeth, the privilege of granting it was confined to the quarter-feffions.

THE antient policy of Europe endeavoured in this manner to regulate agriculture, the great trade of the country, by maxims quite different from those which it established with regard to manufactures, the great trade of the towns. By leaving the farmer no other cuftomers but either the confumers or their immediate factors, the kidders and carriers of corn, it endeavoured to force him to exercise the trade, not only of a farmer, but of a corn merchant or corn retailer. On the contrary, it in many cafes prohibited the manufacturer from exercifing the trade of a fhopkeeper, or from felling his own goods by retail. It meant by the one law to promote the general intereft of the country, or to render corn cheap, without, perhaps, its being well underflood how this was to be done. By the other it meant to promote that of a particular order of men, the shopkeepers, who would be fo VOL. II. much Q

BOOK IV.

114

much underfold by the manufacturer, it was supposed, that their trade would be ruined if he was allowed to retail at all.

THE manufacturer, however, though he had been allowed to keep a fhop, and to fell his own goods by retail, could not have underfold the common fhopkeeper. Whatever part of his capital he might have placed in his fhop, he must have withdrawn it from his manufacture. In order to carry on his business on a level with that of other people, as he must have had the profit of a manufacturer on the one part, fo he must have had that of a shopkeeper upon the other. Let us suppose, for example, that in the particular town where he lived, ten per cent. was the ordinary profit both of manufacturing and fhopkeeping flock; he must in this cafe have charged upon every piece of his own goods which he fold in his fhop, a profit of twenty per cent. When he carried them from his workhouse to his shop, he must have valued them at the price for which he could have fold them to a dealer or fhopkeeper, who would have bought them by wholefale. If he valued them lower, he loft a part of the profit of his manufacturing capital. When again he fold them from his fhop, unlefs he got the fame price at which a fhopkeeper would have fold them, he loft a part of the profit of his shopkeeping capital. Though he might appear, therefore, to make a double profit upon the fame piece of goods, yet as these goods made fucceffively a part of two diffinct capitals, he made but a fingle profit upon the whole capital employed about them; and if he made lefs than this profit, he was a lofer, or did not employ his whole capital with the fame advantage as the greater part of his neighbours.

WHAT the manufacturer was prohibited to do, the farmer was in fome measure enjoined to do; to divide his capital between two different employments; to keep one part of it in his grana-

ries

ries and flack yard, for fupplying the occasional demands of the CHAP. market; and to employ the other in the cultivation of his land. But as he could not afford to employ the latter for lefs than the ordinary profits of farming flock, fo he could as little afford to employ the former for lefs than the ordinary profits of mercantile flock. Whether the flock which really carried on the bufinefs of the corn merchant belonged to the perfon who was called a farmer, or to the perfon who was called a corn merchant, an equal profit was in both cafes requifite, in order to indemnify its owner for employing it in this manner; in order to put his business upon a level with other trades, and in order to hinder him from having an intereft to change it as foon as poffible for fome other. The farmer, therefore, who was thus forced to exercise the trade of a corn merchant, could not afford to fell his corn cheaper than any other corn merchant would have been obliged to do in the cafe of a free competition.

THE dealer who can employ his whole flock in one fingle branch of bufinefs, has an advantage of the fame kind with the workman who can employ his whole labour in one fingle operation. As the latter acquires a dexterity which enables him, with the fame two hands, to perform a much greater quantity of work; fo the former acquires fo eafy and ready a method of transacting his business, of buying and disposing of his goods, that with the fame capital he can transact a much greater quantity of bufinefs. As the one can commonly afford his work a good deal cheaper, fo the other can commonly afford his goods fomewhat cheaper than if his flock and attention were both employed about a greater variety of objects. The greater part of manufacturers could not afford to retail their own goods fo cheap as a vigilant and active fhopkeeper, whofe fole bufinefs it was to buy them by wholefale, and to retail them again. The greater part of farmers could still less afford to retail their own corn, or to supply Q 2 the

BOOK the inhabitants of a town, at perhaps four or five miles diffance IV. from the greater part of them, fo cheap as a vigilant and active corn merchant, whofe fole bufinefs it was to purchafe corn by wholefale, to collect it into a great magazine, and to retail it again.

> THE law which prohibited the manufacturer from exercifing the trade of a shopkeeper, endeavoured to force this division in the employment of flock to go on faster than it might otherwife have done. The law which obliged the farmer to exercise the trade of a corn merchant, endeavoured to hinder it from going on fo fast. Both laws were evident violations of natural liberty, and therefore unjust; and they were both too as impolitick as they were unjust. It is the interest of every fociety, that things of this kind should never either be forced or obstructed. The man who employs either his labour or his flock in a greater variety of ways than his fituation renders neceffary, can never hurt his neighbour by underfelling him. He may hurt himfelf, and he generally does fo. Jack of all trades will never be rich, fays the proverb. But the law ought always to truft people with the care of their own interest, as in their local fituations they must generally be able to judge better of it than the legiflator can do. The law, however, which obliged the farmer to exercise the trade of a corn merchant, was by far the most pernicious of the two.

> It obstructed, not only that division in the employment of flock which is fo advantageous to every fociety, but it obstructed likewife the improvement and cultivation of the land. By obliging the farmer to carry on two trades instead of one, it forced him to divide his capital into two parts, of which one only could be employed in cultivation. But if he had been at liberty to fell his whole crop to a corn merchant as fast as he could thresh it out, his

his whole capital might have returned immediately to the land, and liave been employed in buying more cattle, and hiring more fervants, in order to improve and cultivate it better. But by being obliged to fell his corn by retail, he was obliged to keep a great part of his capital in his granaries and flack yard through the year, and could not, therefore, cultivate fo well as with the fame capital he might otherwife have done. This law, therefore, neceffarily obftructed the improvement of the land, and, inftead of tending to render corn cheaper, must have tended to render it fcarcer, and therefore dearer, than it would otherwife have been.

AFTER the bulinels of the farmer, that of the corn merchant is in reality the trade which, if properly protected and encouraged, would contribute the most to the raising of corn. It would fupport the trade of the farmer in the fame manner as the trade of the wholefale dealer fupports that of the manufacturer.

THE wholefale dealer, by affording a ready market to the manufacturer, by taking his goods off his hand as faft as he can make them, and by fometimes even advancing their price to him before he has made them, enables him to keep his whole capital, and fometimes even more than his whole capital, conftantly employed in manufacturing, and confequently to manufacture a much greater quantity of goods than if he was obliged to difpofe of them himfelf to the immediate confumers, or even to the retailers. As the capital of the wholefale merchant too is generally fufficient to replace that of many manufacturers, this intercourfe between him and them interefts the owner of a large capital to fupport the owners of a great number of fmall ones, and to affift them in thofe loffes and misfortunes which might otherwife prove ruinous to them. CHAP.

AN

BOOK IV.

An intercourse of the fame kind universally established between the farmers and the corn merchants, would be attended with effects equally beneficial to the farmers. They would be enabled to keep their whole capitals, and even more than their whole capitals, confantly employed in cultivation. In cafe of any of those accidents, to which no trade is more liable than theirs, they would find in their ordinary cuftomer, the wealthy corn merchant, a perfon who had both an interest to support them, and the ability to do it, and they would not, as at prefent, be entirely dependent upon the forbearance of their landlord, or the mercy of his fleward. Were it poffible, as perhaps it is not, to establish this intercourse universally, and all at once, were it poffible to turn all at once the whole farming flock of the kingdom to its proper bufinefs, the cultivation of land, withdrawing it from every other employment into which any part of it may be at prefent diverted, and were it poffible, in order to fupport and affift upon occasion the operations of this great flock, to provide all at once another flock almost equally great, it is not perhaps very eafy to imagine how great, how extensive, and how fudden would be the improvement which this change of circumstances would alone produce upon the whole face of the country.

THE flatute of Edward VI. therefore, by prohibiting as much as poffible any middle man from coming in between the grower and the confumer, endeavoured to annihilate a trade of which the free exercise is not only the best palliative of the inconveniences of a dearth, but the best preventative of that calamity: after the trade of the farmer, no trade contributing fo much to the growing of corn as that of the corn merchant.

THE rigour of this law was afterwards foftened by feveral fubfequent flatutes, which fucceffively permitted the engroffing of corn when the price of wheat fhould not exceed twenty, twentyfour, thirty-two, and forty fhillings the quarter. At laft, by the 15th

15th of Charles II. c. 7. the engroffing or buying of corn in order to fell it again, as long as the price of wheat did not exceed forty-eight fhillings the quarter, and that of other grain in proportion, was declared lawful to all perfons not being foreftallers, that is, not felling again in the fame market within three months. All the freedom which the trade of the inland corn dealer has ever yet enjoyed, was beftowed upon it by this ftatute. The ftatute of the twelfth of the prefent king, which repeals almoft all the other ancient laws againft engroffers and foreftallers, does not repeal the reftrictions of this particular ftatute, which therefore ftill continue in force.

THIS statute, however, authorifes in some measure two very absurd popular prejudices.

FIRST, it fuppofes that when the price of wheat has rifen fo high as forty-eight fhillings the quarter, and that of other grain in proportion, corn is likely to be fo engroffed as to hurt the people. But from what has been already faid, it feems evident enough that corn can at no price be fo engroffed by the inland dealers as to hurt the people; and forty-eight fhillings the quarter befides, though it may be confidered as a very high price, yet in years of fearcity it is a price which frequently takes place immediately after harveft, when fearce any part of the new crop can be fold off, and when it is impoffible even for ignorance to fuppofe that any part of it can be fo engroffed as to hurt the people.

SECONDLY, it fuppofes that there is a certain price at which corn is likely to be foreftalled, that is, bought up in order to be fold again foon after in the fame market, fo as to hurt the people. But if a merchant ever buys up corn, either going to a particular market or in a particular market, in order to fell it again foon after in the fame market,

#### NATURE AND CAUSES OF THE

BOOK IV.

ket, it must be because he judges that the market cannot be so liberally supplied through the whole feafon as upon that particular occa-\_\_\_\_ fion, and that the price, therefore, muft foon rife. If he judges wrong in this, and if the price does not rife, he not only lofes the whole profit of the flock which he employs in this manner, but a part of the flock itfelf, by the expence and lofs which neceffarily attends the floring and keeping of corn. He hurts himfelf, therefore, much more effentially than he can hurt even the particular people whom he may hinder from fupplying themfelves upon that particular market day, becaufe they may afterwards fupply themfelves juft as cheap upon any other market day. If he judges right, inflead of hurting the great body of the people, he renders them a moft important fervice. By making them feel the inconveniencies of a dearth fomewhat earlier than they otherwife might do, he prevents their feeling them afterwards fo feverely as they certainly would do, if the cheapnefs of price encouraged them to confume faster than fuited the real fcarcity of the feafon. When the fcarcity is real, the beft thing that can be done for the people is to divide the inconveniencies of it as equally as poffible through all the different months, and weeks, and days of the year. The interest of the corn merchant makes him fludy to do this as exactly as he can; and as no other perfon can have either the fame interest, or the fame knowledge, or the fame abilities to do it fo exactly as he, this most important operation of commerce ought to be trusted entirely to him; or, in other words, the corn trade, fo far at leaft as concerns the fupply of the home-market, ought to-be left perfectly free.

> THE popular fear of engroffing and forestalling may be compared to the popular terrors and fuspicions of witchcraft. The unfortunate wretches accused of this latter crime were not more innocent of the misfortunes imputed to them, than those who have

have been accufed of the former. The law which put an end to C H A P. all profecutions againft witchcraft, which put it out of any man's power to gratify his own malice by accufing his neighbour of that imaginary crime, feems effectually to have put an end to those fears and fuspicions, by taking away the great cause which encouraged and fupported them. The law which should reftore entire freedom to the inland trade of corn, would probably prove as effectual to put an end to the popular fears of engroffing and forestalling.

THE 15th of Charles II. c. 7. however, with all its imperfections, has perhaps contributed more both to the plentiful fupply of the home market, and to the increase of tillage, than any other law in the statute book. It is from this law that the inland corn trade has derived all the liberty and protection which it has ever yet enjoyed; and both the supply of the home market, and the interest of tillage, are much more effectually promoted by the inland, than either by the importation or exportation trade.

THE proportion of the average quantity of all forts of grain imported into Great Britain to that of all forts of grain confumed, it has been computed by the author of the tracts upon the corn trade, does not exceed that of one to five hundred and feventy. For fupplying the home market, therefore, the importance of the inland trade must be to that of the importation trade as five hundred and feventy to one.

THE average quantity of all forts of grain exported from Great Britain does not, according to the fame author, exceed the one and thirtieth part of the annual produce. For the encouragement of tillage, therefore, by providing a market for the home produce, the importance of the inland trade must be to that of the exportation trade as thirty to one.

VOL. II.

I HAVE

I HAVE no great faith in political arithmetick, and I mean not to warrant the exactness of either of these computations. I mention them only in order to show of how much less consequence, in the opinion of the most judicious and experienced perfons, the foreign trade of corn is than the home trade. The great cheapness of corn in the years immediately preceding the establishment of the bounty, may perhaps, with reason, be ascribed in some measure to the operation of this statute of Charles II. which had been enacted about five and twenty years before, and which had therefore full time to produce its effect.

A VERY few words will fufficiently explain all that I have to fay concerning the other three branches of the corn trade.

II. THE trade of the merchant importer of foreign corn for home confumption, evidently contributes to the immediate fupply of the home market, and must fo far be immediately beneficial to the great body of the people. It tends, indeed, to lower fomewhat the average money price of corn, but not to diminish its real value, or the quantity of labour which it is capable of maintaining. If importation was at all times free, our farmers and country gentlemen would, probably, one year with another, get lefs money for their corn than they do at prefent, when importation is at most times in effect prohibited; but the money which they got would be of more value, would buy more goods of all other kinds, and would employ more labour. Their real wealth, their real revenue, therefore, would be the fame as at prefent, though it might be exprefied by a fmaller quantity of filver; and they would neither be difabled nor difcouraged from cultivating corn as much as they do at present. On the contrary, as the rife in the real value of filver, in confequence of lowering the money price of corn, lowers fomewhat the money price of all other commodities, it gives the industry

22

оок

IV.

induftry of the country where it takes place fome advantage in all C H A P. foreign markets, and thereby tends to encourage and increase that induftry. But the extent of the home market for corn muft be in proportion to the general induftry of the country where it grows, or to the number of those who produce fomething elfe, and therefore have fomething elfe, or what comes to the fame thing, the price of fomething elfe, to give in exchange for corn. But in every country the home market, as it is the nearest and most convenient, fo is it likewise the greatest and most important market for corn. That rife in the real value of filver, therefore, which is the effect of lowering the average money price of corn, tends to enlarge the greatest and most important market for corn, and thereby to encourage, instead of discouraging, its growth.

By the 22d of Charles II. c. 13. the importation of wheat, whenever the price in the home market did not exceed fifty-three fhillings and four pence the quarter, was fubjected to a duty of fixteen fhillings the quarter; and to a duty of eight fhillings whenever the price did not exceed four pounds. The former of thefe two prices has, for more than a century paft, taken place only in times of very great fcarcity; and the latter has, fo far as I know, not taken place at all. Yet, till wheat had rifen above this latter price, it was by this flatute fubjected to a very high duty; and, till it had rifen above the former, to a duty which amounted to a prohibition. The importation of other forts of grain was reftrained at rates, and by duties, in proportion to the value of the grain, almoft equally high \*.

THE diffrefs which, in years of fcarcity, the flrict execution of this flatute might have brought upon the people, would probably have been very great. But, upon fuch occasions, its execution was generally

Grain.

<sup>\*</sup> Before the 13th of the prefent king, the following were the duties payable upon the importation of the different forts of grain :

OOK generally fuspended by temporary statutes, which permitted, for a limited time, the importation of foreign corn. The neceffity of these temporary statutes fufficiently demonstrates the impropriety of this general one.

> THESE reftraints upon importation, though prior to the effablifhment of the bounty, were dictated by the fame fpirit, by the fame principles, which afterwards enacted that regulation. How hurtful soever in themselves, these or some other restraints upon importation became neceffary in confequence of that regulation. If, when wheat was either below forty-eight shillings the quarter, or not much above it, foreign corn could have been imported either duty free, or upon paying only a fmall duty, it might have been exported again, with the benefit of the bounty, to the great lofs of the public revenue, and to the entire perversion of the inflitution, of which the object was to extend the market for the home growth, not that for the growth of foreign countries.

> III. THE trade of the merchant exporter of corn for foreign confumption, certainly does not contribute directly to the plentiful fupply of the home market. It does fo, however, indirectly. From whatever fource this fupply may be ufually drawn, whether from home growth or from foreign importation, unless more corn

These different duties were imposed, partly by the 22d of Charles II. in place of the Old Subfidy, partly by the New Subfidy, by the One-third and Two-thirds Subfidy, and by the Subfidy 1747. is

4

24

IV.

is either ufually grown, or ufually imported into the country, than what is ufually confumed in it, the fupply of the home market can never be very plentiful. But, unlefs the furplus can, in all ordinary cafes, be exported, the growers will be careful never to grow more, and the importers never to import more, than what the bare confumption of the home market requires. That market will very feldom be overflocked; but it will generally be underflocked, the people, whofe bufinefs it is to fupply it, being generally afraid left their goods fhould be left upon their hands. The prohibition of exportation limits the improvement and cultivation of the country to what the fupply of its own inhabitants requires. The freedom of exportation enables it to extend its cultivation for the fupply of foreign nations.

By the 12th of Charles II. c. 4. the exportation of corn was permitted whenever the price of wheat did not exceed forty fhillings the quarter, and that of other grain in proportion. By the 15th of the fame prince this liberty was extended till the price of wheat exceeded forty-eight fhillings the quarter; and by the 22d, to all higher prices. A poundage, indeed, was to be paid to the king upon fuch exportation. But all grain was rated fo low in the book of rates, that this poundage amounted only upon wheat to a fhilling, upon oats to four-pence, and upon all other grain to fixpence the quarter. By the 1ft of William and Mary, the aft which eftablifhed the bounty, this finall duty was virtually taken off whenever the price of wheat did not exceed forty-eight fhillings the quarter; and by the 11th and 12th of William III. c. 20. it wasexpressly taken off at all higher prices.

The trade of the merchant exporter was, in this manner, not only encouraged by a bounty, but rendered much more free than that of the inland dealer. By the last of these statutes, corn could be engrossed at any price for exportation; but it could not be engrossed

#### NATURE AND CAUSES OF THE

groffed for inland fale, except when the price did not exceed forty-BOOK. eight shillings the quarter. The interest of the inland dealer, however, it has already been shown, can never be opposite to that of the great body of the people. That of the merchant exporter may, and in fact fometimes is. If, while his own country labours under a dearth, a neighbouring country fhould be afflicted with a famine, it might be his interest to carry corn to the latter country in fuch quantities as might very much aggravate the calamities of the dearth. The plentiful fupply of the home market was not the direct object of those statutes; but, under the pretence of encouraging agriculture, to raife the money price of corn as high as polfible, and thereby to occafion, as much as poffible, a conftant dearth in the home market. By the difcouragement of importation, the fupply of that market, even in times of great fcarcity, was confined to the home growth; and by the encouragement of exportation, when the price was fo high as forty-eight fhillings the quarter, that market was not, even in times of confiderable fcarcity, allowed to enjoy the whole of that growth. The temporary laws, prohibiting for a limited time the exportation of corn, and taking off for a limited time the duties upon its importation, expedients to which Great Britain has been obliged fo frequently to have recourfe, fufficiently demonstrate the impropriety of her general fystem. Had ' that fystem been good, she would not fo frequently have been reduced to the neceffity of departing from it.

> WERE all nations to follow the liberal fyftem of free exportation and free importation, the different flates into which a great continent was divided would fo far refemble the different provinces of a great empire. As among the different provinces of a great empire the freedom of the inland trade appears, both from reafon and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine; fo would the freedom of the exportation and importation trade be among the different flates

> > I

into

IV.

into which a great continent was divided. The larger the conti- CHAP. nent, the eafier the communication through all the different parts of it, both by land and by water, the lefs would any one particular part of it ever be exposed to either of these calamities, the scarcity of any one country being more likely to be relieved by the plenty of fome other. But very few countries have entirely adopted this liberal fystem. The freedom of the corn trade is almost every where more or lefs reftrained, and, in many countries, is confined. by fuch abfurd regulations, as frequently aggravate the unavoidable misfortune of a dearth, into the dreadful calamity of a famine. The demand of fuch countries for corn may frequently become fo great and fo urgent, that a fmall flate in their neighbourhood, which happened at the fame time to be labouring under fome degree of dearth, could not venture to fupply them without exposing itfelf to the like dreadful calamity. The very bad policy of one country may thus render it in fome measure dangerous and imprudent to establish what would otherwife be the best policy in another. The unlimited freedom of exportation, however, would be much less dangerous in great states, in which the growth being much greater, the fupply could feldom be much affected by any quantity of corn that was likely to be exported. In a Swifs canton, or in some of the little states of Italy, it may, perhaps, sometimes be neceffary to reftrain the exportation of corn. In fuch great countries as France or England it fcarce ever can. To hinder, befides, the farmer from fending his goods at all times to the beft market, is evidently to facrifice the ordinary laws of juffice to. an idea of public utility, to a fort of reafons of flate; an act of legiflative authority which ought to be exercised only, which can be. pardoned only in cafes of the most urgent necessity. The price. at which the exportation of corn is prohibited, if it is ever to be: prohibited, ought always to be a very high price.

127

THE?

THE laws concerning corn may every where be compared to the laws concerning religion. The people feel themfelves fo much interefted in what relates either to their fubfistence in this life, or to their happines in a life to come, that government must yield to their prejudices, and, in order to preferve the public tranquillity, establish that fystem which they approve of. It is upon this account, perhaps, that we so feldom find a reasonable fystem established with regard to either of those two capital objects.

IV. THE trade of the merchant carrier, or of the importer of foreign corn in order to export it again, contributes to the plentiful fupply of the home market. It is not indeed the direct purpofe of his trade to fell his corn there. But he will generally be willing to do fo, and even for a good deal lefs money than he might expect in a foreign market; becaufe he faves in this man-" ner the expence of loading and unloading, of freight and infurance. The inhabitants of the country which, by means of the carrying trade, becomes the magazine and florehoufe for the fupply of other countries, can very feldom be in want themfelves. Though the carrying trade might thus contribute to reduce the average money price of corn in the home market, it would not thereby lower its real value. It would only raife fomewhat the real value of filver.

THE carrying trade was in effect prohibited in Great Britain, upon all ordinary occasions, by the high duties upon the importation of foreign corn of the greater part of which there was no drawback; and upon extraordinary occasions, when a fearcity made it necessary to suspend those duties by temporary statutes, exportation was always prohibited. By this system of laws, therefore, the carrying trade was in effect prohibited upon all occasions.

THAT fystem of laws, therefore, which is connected with the establishment of the bounty, seems to deserve no part of the praise which

128

BOOK

IV.

#### WEALTH OF NATIONS. THE

which has been beflowed upon it. The improvement and pro- CHAP. fperity of Great Britain, which has been fo often afcribed to those laws, may very eafily be accounted for by other caufes. That fecurity which the laws in Great Britain give to every man that he fhall enjoy the fruits of his own labour, is alone fufficient to make any country flourish, notwithstanding these and twenty other absurd regulations of commerce; and this fecurity was perfected by the revolution, much about the fame time that the bounty was eftablifhed. The natural effort of every individual to better his own condition, when fuffered to exert itfelf with freedom and fecurity, is fo powerful a principle that it is alone, and without any affiftance, not only capable of carrying on the fociety to wealth and prosperity, but of furmounting a hundred impertinent obstructions with which the folly of human laws too often incumbers its operations; though the effect of these obstructions is always more or less either to encroach upon its freedom, or to diminish its fecurity. In Great Britain industry is perfectly fecure; and though it is far from being perfectly free, it is as free or freer than in any other part of Europe.

THOUGH the period of the greatest prosperity and improvement of Great Britain, has been posterior to that fystem of laws which is connected with the bounty, we must not upon that account impute it to those laws. It has been posterior likewife to the national debt. But the national debt has most affuredly not been the cause of it.

THOUGH the fystem of laws which is connected with the bounty, has exactly the fame tendency with the police of Spain and Portugal; to lower fomewhat the value of the precious metals in the country where it takes place; yet Great Britain is certainly one of the richeft countries in Europe, while Spain and Portugal are perhaps among the most beggarly. This difference of fituation, however, may eafily be accounted for from two different S

VOL. II.

BOOK ferent caufes. Firft, the tax in Spain, the prohibition in Portugal of exporting gold and filver, and the vigilant police which watches over the execution of those laws, muft, in two very poor countries, which between them import annually upwards of fix millions fterling, operate, not only more directly, but much more forcibly in reducing the value of those metals there, than the corn laws can do in Great Britain. And, fecondly, this bad policy is not in those countries counter-balanced by the general liberty and fecurity of the people. Industry is there neither free nor fecure, and the civil and ecclefiaftical governments of both Spain and Portugal, are fuch as would alone be fufficient to perpetuate their prefent ftate of poverty, even though their regulations of commerce were as wife as the greater part of them are abfurd and foolifh.

> THE 13th of the prefent king, c. 43. feems to have established a new fystem with regard to the corn laws, in many respects better than the ancient one, but in one or two respects perhaps not quite fo good.

By this flatute the high duties upon importation for home confumption are taken off fo foon as the price of middling wheat rifes to forty-eight fhillings the quarter; that of middling rye, peafe or beans, to thirty-two fhillings; that of barley to twenty-four fhillings; and that of oats to fixteen fhillings; and inftead of them a fmall duty is impofed of only fix-pence upon the quarter of wheat, and upon that of other grain in proportion. With regard to all thefe different forts of grain, but particularly with regard to wheat, the home market is thus opened to foreign fupplies at prices confiderably lower than before.

By the fame ftatute the old bounty of five fhillings upon the exportation of wheat ceafes fo foon as the price rifes to forty-four fhilt lings

lings the quarter, inflead of forty-eight, the price at which it ceafed before; that of two fhillings and fixpence upon the exportation of barley ceafes fo foon as the price rifes to twenty-two fhillings, inflead of twenty-four, the price at which it ceafed before; that of two fhillings and fixpence upon the exportation of oatmeal ceafes fo foon as the price rifes to fourteen fhillings, inflead of fifteen, the price at which it ceafed before. The bounty upon rye is reduced from three fhillings and fixpence to three fhillings, and it ceafes fo foon as the price rifes to twenty-eight fhillings, inflead of thirtytwo, the price at which it ceafed before. If bounties are as improper as I have endeavoured to prove them to be, the fooner they ceafe, and the lower they are, fo much the better.

THE fame flatute permits, at the lowest prices, the importation of corn, in order to be exported again, duty free, provided it is in the mean time lodged in a warehouse under the joint locks of the king and the importer. This liberty, indeed, extends to no more than twenty-five of the different ports of Great Britain. They are, however, the principal ones, and there may not, perhaps, be warehouse proper for this purpose in the greater part of the others.

So far this law feems evidently an improvement upon the antient fystem.

BUT by the fame law a bounty of two fhillings the quarter is given for the exportation of oats whenever the price does not exceed fourteen fhillings. No bounty had ever been given before for the exportation of this grain, no more than for that of peafe or beans.

By the fame law too, the exportation of wheat is prohibited fo foon as the price rifes to forty-four fhillings the quarter; that of rye fo foon as it rifes to twenty-eight fhillings; that of barley fo foon CHAP. V.

28

as it rifes to twenty-two fhillings; and that of oats fo foon as they rife to fourteen fhillings. Those feveral prices feem all of them a good deal too low, and there feems to be an impropriety, befides, in prohibiting exportation altogether at those precise prices at which that bounty, which was given in order to force it, is withdrawn. The bounty ought certainly either to have been withdrawn at a much lower price, or exportation ought to have been allowed at a much higher.

So far, therefore, this law feems to be inferior to the ancient fyftem. With all its imperfections, however, we may perhaps fay of it what was faid of the laws of Solon, that, though not the beft in itfelf, it is the beft which the interefts, prejudices, and temper of the times would admit of. It may perhaps in due time prepare the way for a better.

## CHAP. VI.

# Of Treaties of Commerce.

W HEN a nation binds itfelf by treaty either to permit the entry of certain goods from one foreign country which it prohibits from all others, or to exempt the goods of one country from duties to which it fubjects those of all others, the country, or at least the merchants and manufacturers of the country, whose commerce is fo favoured, must neceffarily derive great advantage from the treaty. Those merchants and manufacturers enjoy a fort of monopoly in the country which is fo indulgent to them. That country becomes a market both more extensive and more advantageous for their goods: more extensive, becaufe

132

BOOK

### THE WEALTH OF NATIONS.

becaufe the goods of other nations being either excluded or fubjected to heavier duties, it takes off a greater quantity of theirs: more advantageous, becaufe the merchants of the favoured country, enjoying a fort of monopoly there, will often fell their goods for a better price than if exposed to the free competition of all other nations.

SUCH treaties, however, though they may be advantageous to the merchants and manufacturers of the favoured, are neceffarily difadvantageous to those of the favouring country. A monopoly is thus granted against them to a foreign nation; and they must frequently buy the foreign goods they have occasion for dearer than if the free competition of other nations was admitted. That part of its own produce with which fuch a nation purchases foreign goods, must confequently be fold cheaper, becaufe when two things are exchanged for one another, the cheapnels of the one is a neceffary confequence, or rather is the fame thing with the dearnefs of the other. The exchangeable value of its annual produce, therefore, is likely to be diminished by every such treaty. This diminution, however, can fcarce amount to any politive lofs, but only to a leffening of the gain which it might otherwife make. Though it fells its goods cheaper than it otherwife might do, it will not probably fell them for lefs than they coft; nor, as in the cafe of bounties, for a price which will not replace the capital employed in bringing them to market, together with the ordinary profits of flock. The trade could not go on long if it did. Even the favouring country, therefore, may still gain by the trade, though less than if there was a free competition.

Some treaties of commerce, however, have been fuppoled advantageous upon principles very different from these; and a commercial country has fometimes granted a monopoly of this kind against

**BOOK** IV. againft itfelf to certain goods of a foreign nation, becaufe it expected that in the whole commerce between them, it would annually fell more than it would buy, and that a balance in gold and filver would be annually returned to it. It is upon this principle that the treaty of commerce between England and Portugal, concluded in 1703 by Mr. Methuen, has been fo much commended. The following is a literal translation of that treaty, which confifts of three articles only.

#### ART. I.

His facred royal majefty of Portugal promifes, both in his own name, and that of his fucceffors, to admit for ever hereafter, into Portugal, the woollen cloths, and the reft of the woollen manufactures of the Britifh, as was accuftomed, till they were prohibited by the law; neverthelefs upon this condition:

#### ART. II.

THAT is to fay, that her facred royal majefty of Great Britain fhall, in her own name, and that of her fucceffors, be obliged for ever hereafter, to admit the wines of the growth of Portugal into Britain; fo that at no time, whether there fhall be peace or war between the kingdoms of Britain and France, any thing more fhall be demanded for thefe wines by the name of cuftom or duty, or by whatfoever other title, directly or indirectly, whether they fhall be imported into Great Britain in pipes or hogfheads, or other cafks, than what fhall be demanded for the like quantity or meafure of French wine, deducting or abating a thirdpart of the cuftom or duty. But if at any time this deduction or abatement of cuftoms, which is to be made as aforefaid, fhall in any manner be attempted and prejudiced, it fhall be juft and lawful for his facred royal majefty of Portugal, again to prohibit

134

hibit the woollen cloths, and the reft of the British woollen manufactures.

#### ART. III.

THE most excellent lords the plenipotentiaries promife and take upon themselves, that their above-named masters shall ratify this treaty; and within the space of two months, the ratifications shall be exchanged.

By this treaty the crown of Portugal becomes bound to admit the Englifh woollens upon the fame footing as before the prohibition, that is, not to raife the duties which had been paid before that time. But it does not become bound to admit them upon any better terms than those of any other nation, of France or Holland, for example. The crown of Great Britain, on the contrary, becomes bound to admit the wines of Portugal, upon paying only two-thirds of the duty, which is paid for those of France, the wines most likely to come into competition with them. So far this treaty, therefore, is evidently advantageous to Portugal, and difadvantageous to Great Britain.

It has been celebrated, however, as a mafter-piece of the commercial policy of England. Portugal receives annually from the Brazils a greater quantity of gold than can be employed in its domeftick commerce, whether in the fhape of coin or of plate. The furplus is too valuable to be allowed to lie idle and locked up in coffers, and as it can find no advantageous market at home, it muft, notwithftanding any prohibition, be fent abroad and exchanged for fomething for which there is a more advantageous market at home. A large fhare of it comes annually to England, in return either for Englifh goods, or for those of other European nations that receive their return's through England. Mr.

BOOK IV. Mr. Baretti was informed that the weekly packet boat from Lifbon brings, one week with another, more than fifty thoufand pounds in gold to England. The fum had probably been exaggerated. It would amount to more than two millions fix hundred thoufand pounds a year, which is more than the Brazils are fuppofed to afford.

> OUR merchants were fome years ago out of humour with the crown of Portugal. Some privileges which had been granted them, not by treaty, but by the free grace of that crown, at the folicitation, indeed, it is probable, and in return for much greater favours, defence and protection, from the crown of Great Britain, had been either infringed or revoked. The people, therefore, ufually most interested in celebrating the Portugal trade, were then rather disposed to represent it as less advantageous than it had commonly been imagined. The far greater part, almost the whole, they pretended, of this annual importation of gold, was not on account of Great Britain, but of other European nations; the fruits and wines of Portugal annually imported into Great Britain nearly compensating the value of the British goods fent thither.

> LET us fuppole, however, that the whole was on account of Great Britain, and that it amounted to a ftill greater fum than Mr. Baretti feems to imagine: this trade would not, upon that account, be more advantageous than any other in which for the fame value fent out, we received an equal value of confumable goods in return.

> IT is but a very small part of this importation which, it can be fupposed, is employed as an annual addition either to the plate or to the coin of the kingdom. The rest must all be sent abroad and exchanged

But if CHAP. exchanged for confumable goods of fome kind or other. those confumable goods were purchased directly with the produce of \_\_\_\_\_ English industry, it would be more for the advantage of England than first to purchase with that produce the gold of Portugal, and afterwards to purchase with that gold those confumable goods. A direct foreign trade of confumption is always more advantageous than a round-about one; and to bring the fame value of foreign goods to the home market, requires a much finaller capital in the one way than in the other. If a fmaller share of its industry, therefore, had been employed in producing goods fit for the Portugal market, and a greater in producing those fit for the other markets where those confumable goods for which there is a demand in Great Britain are to be had, it would have been more for the advantage of England. To procure both the gold, which it wants for its own use, and the confumable goods, would, in this way, employ a much fmaller capital than at prefent. There would be a spare capital, therefore, to be employed for other purposes, in exciting an additional quantity of industry, and in raising a greater annual produce.

THOUGH Britain were entirely excluded from the Portugal trade, it could find very little difficulty in procuring all the annual fupplies of gold which it wants, either for the purposes of plate, or of coin, or of foreign trade. Gold, like every other commodity, is always fomewhere or another to be got for its value by those who have that value to give for it. The annual furplus of gold in Portugal, befides, would still be fent abroad, and though not carried away by Great Britain, would be carried away by fome other nation, which would be glad to fell it again for its price, in the fame manner as Great Britain does at prefent. In buying gold of Portugal, indeed, we buy it at the first hand; whereas, in buying it of any other nation, except Spain, we fhould buy it at the fecond, T Vol. II. and

BOOK IV.

and might pay fomewhat dearer. This difference, however, would - furely be too infignificant to deferve the publick attention.

ALMOST all our gold, it is faid, comes from Portugal. With other nations the balance of trade is either againft us, or not much in our favour. But we fhould remember, that the more gold we import from one country, the lefs we muft neceffarily import from all others. The effectual demand for gold, like that for every other commodity, is in every country limited to a certain quantity. If nine-tenths of this quantity are imported from one country, there remains a tenth only to be imported from all others. The more gold befides that is annually imported from fome particular countries, over and above what is requifite for plate and for coin, the more muft neceffarily be exported to fome others; and the more, that moft infignificant object of modern policy, the balance of trade, appears to be in our favour with fome particular countries, the more it muft neceffarily appear to be againft us with many others.

IT was upon this filly notion, however, that England could not fubfift without the Portugal trade, that, towards the end of the late war, France and Spain, without pretending either offence or provocation, required the king of Portugal to exclude all Britifh fhips from his ports, and for the fecurity of this exclution, to receive into them French or Spanifh garrifons. Had the king of Portugal fubmitted to those ignominious terms which his brother-in-law the king of Spain proposed to him, Britain would have been freed from a much greater inconveniency than the loss of the Portugal trade, the burden of fupporting a very weak ally, fo unprovided of every thing for his own defence, that the whole power of England, had it been directed to that fingle purpose, could fcarce perhaps have defended him for another campaign.

#### THE WEALTH OF NATIONS.

campaign. The lofs of the Portugal trade would, no doubt, have C II A P. occafioned a confiderable embarraffment to the merchants at that time engaged in it, who might not, perhaps, have found out, for a year or two, any other equally advantageous method of employing their capitals; and in this would probably have confifted all the inconveniency which England could have fuffered from this notable piece of commercial policy.

THE great annual importation of gold and filver is neither for the purpose of plate nor of coin, but of foreign trade. A roundabout foreign trade of confumption can be carried on more advantageoufly by means of these metals than of almost any other goods. As they are the universal inftruments of commerce, they are more readily received in return for all commodities than any other goods; and on account of their fmall bulk and great value, it cofts lefs to transport them backward and forwards from one place to another than almost any other fort of merchandize, and they lofe lefs of their value by being fo transported. Of all the commodities, therefore, which are bought in one foreign country, for no other purpose but to be fold or exchanged again for some other goods in another, there are none fo convenient as gold and filver. In facilitating all the different round-about foreign trades of confumption which are carried on in Great Britain, confifts the principal advantage of the Portugal trade; and though it is not a capital advantage, it is, no doubt, a confiderable one.

THAT any annual addition which, it can reafonably be fuppofed, is made either to the plate or to the coin of the kingdom, could require but a very fmall annual importation of gold and filver, feems evident enough; and though we had no direct trade with Portugal, this fmall quantity could always, fomewhere or another, be very eafily got.

THOUGH the gold miths trade be very confiderable in Great Britain, the far greater part of the new plate which they annually

**T** 2

fell,

140

BOOK IV. fell, is made from other old plate melted down; fo that the addition annually made to the whole plate of the kingdom cannot be very great, and could require but a very fmall annual importation.

> IT is the fame cafe with the coin. Nobody imagines, I believe, that even the greater part of the annual coinage, amounting, for ten years together, before the late reformation of the gold coin, to upwards of eight hundred thousand pounds a year in gold, was an annual addition to the money before current in the kingdom. In a country where the expence of the coinage is defrayed by the government, the value of the coin, even when it contains its full flandard weight of gold and filver, can never be much greater than that of an equal quantity of those metals uncoined; because it requires only the trouble of going to the mint, and the delay perhaps of a fewweeks, to procure for any quantity of uncoined gold and filver an equal quantity of those metals in coin. But, in every country, the greater part of the current coin is almost always more or lefs worn, or otherwife degenerated from its standard. In Great Britain it was, before the late reformation, a good deal fo, the gold being more thantwo per cent. and the filver more than eight per cent. below its flandard weight. But if forty-four guineas and a half, containing their full standard weight, a pound weight of gold, could purchase very little more than a pound weight of uncoined gold, forty-fourguineas and a half wanting a part of their weight could not purchafe a pound weight, and fomething was to be added in order to make up the deficiency. The current price of gold bullion at market, therefore, inflcad of being the fame with the mint price, or 461. 14s. 6d. was then about 471. 14s. and fometimes about fortyeight pounds. When the greater part of the coin, however, was in this degenerate condition, forty-four guineas and a half, fresh from the mint, would purchafe no more goods in the market than any other ordinary guineas, becaufe when they came into the coffers of the merchant, being confounded with other money, they could

could not afterwards be diffinguished without more trouble than the difference was worth. Like other guineas they were worth no more than 461. 14 s. 6d. If thrown into the melting pot, however, they produced, without any fensible lofs, a pound weight of ftandard gold, which could be fold at any time for between 471. 14 s. and 481. either in gold or filver, as fit for all the purposes of coin as that which had been melted down. There was an evident profit, therefore, in melting down new coined money, and it was done fo inflantaneously, that no precaution of government could prevent it. The operations of the mint were, upon this account, fomewhat like the web of Penelope; the work that was done in the day was undone in the night. The mint was employed, not fo much in making daily additions to the coin, as in replacing the very beft part of it which was daily melted down.

WERE the private people, who carry their gold and filver to the mint, to pay themfelves for the coinage, it would add to the value of those metals in the same manner as the fashion does to that. Coined gold and filver would be more valuable than. of plate. uncoined. The feignorage, if it was not exorbitant, would add to the bullion the whole value of the duty; becaufe, the government having every where the exclusive privilege of coining, no coin can come to market cheaper than they think proper to afford it. If the duty was exorbitant indeed, that is, if it was very much above the real value of the labour and expence requifite for coinage, falfe coiners, both at home and abroad, might be encouraged, by the great difference between the value of bullion and that of coin, topour in fo great a quantity of counterfeit money as might reducethe value of the government money. In France, however, though. the feignorage is eight per cent. no fenfible inconveniency of this kind is found to arife from it. The dangers to which a falfe coiner is every where exposed, if he lives in the country of which he counterfeits.

142

BOOK terfeits the coin, and to which his agents or correspondents are exposed if he lives in a foreign country, are by far too great to be incurred for the fake of a profit of fix or feven per cent.

> THE feignorage in France raifes the value of the coin higher than in proportion to the quantity of pure gold which it contains. Thus by the edict of January, 1726, \* the mint price of fine gold of twenty-four carats was fixed at feven hundred and forty livres, nine fous and one denier one-eleventh, the mark of eight Paris ounces. The gold coin of France, making an allowance for the remedy of the mint, contains twenty-one carats and three fourths of fine gold, and two carats one-fourth of alloy. The mark of ftandard gold, therefore, is worth no more than about fix hundred and feventy-one livres ten deniers. But in France this mark of ftandard gold is coined into thirty Louis-d'ors of twenty-four livres each, or into feven hundred and twenty livres. The coinage, therefore, increases the value of a mark of standard gold bullion, by the difference between fix hundred and feventy-one livres ten deniers and feven hundred and twenty livres; or by forty-eight livres, nineteen fous, and two deniers.

A SEIGNORAGE will, in many cafes, take away altogether, and will, in all cafes, diminish the profit of melting down the new coin. This profit always arifes from the difference between the quantity of bullion which the common currency ought to contain, and that which it actually does contain. If this difference is lefs than the feignorage, there will be loss instead of profit. If it is equal to the feignorage, there will neither be profit nor loss. If it is greater than the feignorage, there will indeed be fome profit, but

+

lefs

<sup>\*</sup> See Dictionaire des Monnoies, tom. ii. article Seigneurage, p. 489. par M. Abot. de Bazinghen, Confeiller-Comifsaire en la Cour des Monnoies à Paris.

lefs than if there was no feignorage. If, before the late reformation of the gold coin, for example, there had been a feignorage of five per cent. upon the coinage, there would have been a lofs of three per cent. upon the melting down of the gold coin. If the feignorage had been two per cent. there would have been neither profit nor lofs. If the feignorage had been one per cent there would have been a profit, but of one per cent. only inftead of two per cent. Wherever money is received by tale, therefore, and not by weight, a feignorage is the most effectual preventative of the melting down of the coin, and, for the fame reason, of its exportation. It is the beft and heaviest pieces that are commonly either melted down or exported; because it is upon fuch that the largeft: profits are made.

THE law for the encouragement of the coinage, by rendering it duty-free, was first enacted, during the reign of Charles II. for a limited time; and afterwards continued, by different prolongations, till 1769, when it was rendered perpetual. The bank of England, in order to replenish their coffers with money, are frequently obliged to carry bullion to the mint; and it was more for their interest, they probably imagined, that the coinage should be at the expence of the government, than at their own. It was, probably, out of complaifance to this great company that the government agreed to render this law perpetual. Should the cuftom of weighing gold, however, come to be difused, as it is very likely to be on account of its inconveniency; fhould the gold-coin of-England come to be received by tale, as it was before the late recoinage, this great company may, perhaps, find that they have upon this, as upon fome other occasions, mistaken their own intereft not a little.

BEFORE the late re-coinage, when the gold currency of England was two per cent. below its standard weight, as there was. 143

no.

BOOK IV. No feignorage, it was two per cent. below the value of that quantity of flandard gold bullion which it ought to have contained. When this great company, therefore, bought gold bullion in order to have it coined, they were obliged to pay for it two per cent. more than it was worth after the coinage. But if there had been a feignorage of two per cent. upon the coinage, the common gold currency, though two per cent. below its flandard weight, would notwithflanding have been equal in value to the quantity of flandard gold which it ought to have contained; the value of the fashion compensating in this case the diminution of the weight. They would indeed have had the feignorage to pay, which being two per cent. their loss upon the whole transaction would have been two per cent. exactly the fame, but no greater than it actually was.

> IF the feignorage had been five per cent. and the gold currency only two per cent. below its flandard weight, the bank would in this cafe have gained three per cent. upon the price of the bullion; but as they would have had a feignorage of five per cent. to pay upon the coinage, their lofs upon the whole tranfaction would, in the fame manner, have been exactly two per cent.

> IF the feignorage had been only one per cent. and the gold currency two per cent. below its flandard weight, the bank would in this cafe have loft only one per cent. upon the price of the bullion; but as they would likewife have had a feignorage of one per cent. to pay, their lofs upon the whole transaction would have been exactly two per cent. in the fame manner as in all other cafes.

> IF there was a reafonable feignorage, while at the fame time the coin contained its full flandard weight, as it has done very nearly

# THE WEALTH OF NATIONS.

nearly fince the late re-coinage, whatever the bank might lofe by CHAP. the feignorage, they would gain upon the price of the bullion; and whatever they might gain upon the price of the bullion, they would lofe by the feignorage. They would neither lofe nor gain, therefore, upon the whole transaction, and they would in this, as in all the foregoing cafes, be exactly in the fame fituation as if there was no feignorage.

WHEN the tax upon a commodity is fo moderate as not to encourage fmuggling, the merchant, who deals in it, though he advances, does not properly pay the tax, as he gets it back in the price of the commodity. The tax is finally paid by the laft purchafer or confumer. But money is a commodity with regard to which every man is a merchant. Nobody buys it but in order to fell it again; and with regard to it there is in ordinary cafes no last purchaser or confumer. When the tax upon coinage, therefore, is fo moderate as not to encourage falle coining, though every body advances the tax, nobody finally pays it; becaufe every body gets it back in the advanced value of the coin.

A MODERATE seignorage, therefore, would not in any case augment the expence of the bank, or of any other private perfons who carry their bullion to the mint in order to be coined, and the want of a moderate feignorage does not in any cafe diminish it. Whether there is or is not a feignorage, if the currency contains its full flandard weight, the coinage cofts nothing to any body, and if it is fhort of that weight, the coinage must always coft the difference between the quantity of bullion which ought to be contained in it, and that which actually is contained in it.

THE government, therefore, when it defrays the expence of coinage, not only incurs fome fmall expence, but lofes fome VOL. II. U fmall

BOOK fmall revenue which it might get by a proper duty; and neither the bank nor any other private perfons are in the fmallest degree benefited by this ufelefs piece of public generofity.

> THE directors of the bank, however, would probably be unwilling to agree to the imposition of a feignorage upon the authority of a fpeculation which promifes them no gain, but only pretends to infure them from any lofs. In the prefent flate of the gold coin, and as long as it continues to be received by weight, they certainly would gain nothing by fuch a change. But if the cuftom of weighing the gold coin fhould ever go into difuse, as it is very likely to do, and if the gold coin fhould ever fall into the fame flate of degradation in which it was before the late re-coinage, the gain, or more properly the favings of the bank, in confequence of the impofition of a feignorage, would probably be very confiderable. The bank of England is the only company which fends any confiderable quantity of bullion to the mint, and the burden of the annual coinage falls entirely or almost entirely upon it. If this annual coinage had nothing to do but to repair the unavoidable loffes and neceffary wear and tear of the coin, it could feldom exceed fifty thousand or at most a hundred thousand pounds. But when the coin is degraded below its flandard weight, the annual coinage muft, befides this, fill up the large vacuities which exportation and the melting pot are continually making in the current coin. It was upon this account that during the ten or twelve years immediatly preceding the late reformation of the gold coin, the annual coinage amounted at an average to more than eight hundred and fifty thousand pounds. But if there had been a feignorage of four or five per cent. upon the gold coin, it would probably, even in the flate in which things then were, have put an effectual flop to the bufinefs both of exportation and of the melting pot. The bank, inflead of lofing 5 every

#### THE WEALTH OF NATIONS.

every year about two and a half per cent. upon the bullion which was to be coined into more than eight hundred and fifty thousand pounds, or incurring an annual loss of more than twenty-one thoufand two hundred and fifty pounds, would not probably have incurred the tenth part of that loss.

THE revenue allotted by parliament for defraying the expence of the coinage is but fourteen thousand pounds a year, and the real expence which it cofts the government, or the fees of the officers of the mint, do not upon ordinary occasions, I am affured, exceed the half of that fum. The faving of fo very small a fum, or even the gaining of another which could not well be much larger, are objects too inconfiderable, it may be thought, to deferve the ferious attention of government. But the faving of eighteen or twenty thousand pounds a year in case of an event which is not improbable, which has frequently happened before, and which is very likely to happen again, is furely an object which well deferves the ferious attention even of fo great a company as the bank of England.

Some of the foregoing reafonings and obfervations might perhaps have been more properly placed in those chapters of the first book which treat of the origin and use of money, and of the difference between the real and the nominal price of commodities. But as the law for the encouragement of coinage derives its origin from those vulgar prejudices which have been introduced by the mercantile fystem; I judged it more proper to referve them for this chapter. Nothing could be more agreeable to the spirit of that fystem than a fort of bounty upon the production of money, the very thing which, it some of its many admirable expedients for enriching the country.

### CHAP. VII.

# Of Colonies.

### PART FIRST.

Of the motives for establishing new Colonies.

BOOK THE interest which occasioned the first fettlement of the different European colonies in America and the West Indies; was not altogether fo plain and diffinct as that which directed the eftablishment of those of ancient Greece and Rome.

> ALL the different states of ancient Greece possessed, each of them, but a very fmall territory, and when the people in any one of them multiplied beyond what that territory could eafily maintain, a part of them were fent in quest of a new habitation in fome remote and diftant part of the world; the warlike neighbours who furrounded them on all fides, rendering it difficult for any of them to enlarge very much its territory at home. The colonies of the Dorians reforted chiefly to Italy and Sicily, which in the times preceding the foundation of Rome, were inhabited by barbarous and uncivilized nations: those of the Ionians and Eolians, the two other great tribes of the Greeks, to Afia Minor and the illands of the Egean Sea, of which the inhabitants feem. at that time to have been pretty much in the fame flate as those of Sicily and Italy. The mother city, though the confidered the colony as a child, at all times entitled to great favour and affiftance, and owing in return much gratitude and refpect, yet confidered it as an emancipated child over whom fhe pretended to claim no direct authority or jurifdiction. The colony fettled its own form of government, enacted its own laws, elected its own magiftrates, and made peace or war with its neighbours as an independant flate which had no occafion to wait for the approbation or

148

17.

or confent of the mother city. Nothing can be more plain and diffinct than the intereft which directed every fuch eftablishment.

ROME, like most of the other ancient republicks; was originally founded upon an Agrarian law, which divided the publick territory in a certain proportion among the different citizens who compofed the flate. The course of human affairs, by marriage, by fucceffion, and by alienation, neceffarily deranged this original divi-fion, and frequently threw the lands, which had been allotted for the maintenance of many different families into the poffession . of a fingle perfon. To remedy this diforder, for fuch it was fuppoled to be, a law was made, reftricting the quantity of land which any citizen could poffers to five hundred jugera, about three hundred and fifty English acres. This law, however, though we read of its having been executed upon one or two occafions, waseither neglected or evaded, and the inequality of fortunes went on continually increasing. The greater part of the citizens, had no land, and without it the manners and cuftoms of those times rendered it difficult for a freeman to maintain his independency. In the prefent times, though a poor man has no land of his own, if he has a little flock, he may either farm the lands of another, or he may carry on fome little retail trade; and if he has no flock, he may find employment either as a country labourer, or as an artificer. But, among the ancient Romans, the lands of the rich were all cultivated by flaves, who wrought under an overfeer, who was likewife a flave; fo that a poor freeman had little chance. of being employed either as a farmer or as a labourer. A11 trades and manufactures too, even the retail trade, were carried. on by the flaves of the rich for the benefit of their mafters, whole wealth, authority, and protection made it difficult for a poor freeman to maintain the competition against them. The citizens, therefore, who had no land, had fcarce any other means of fublist-ence but the bounties of the candidates at the annual elections, The

-----

The tribunes, when they had a mind to animate the people against the rich and the great, put them in mind of the antient division of lands, and reprefented that law which reftricted this fort of private property as the fundamental law of the republick. The people became clamorous to get land, and the rich and the great. we may believe, were perfectly determined not to give them any part of theirs. To fatisfy them in fome meafure, therefore, they frequently proposed to fend out a new colony. But conquering Rome was, even upon fuch occasions, under no necessity of turning out her citizens to feek their fortune, if one may fay fo, through the wide world, without knowing where they were to fettle. She affigned them lands generally in the conquered provinces of Italy, where, being within the dominions of the republick, they could never form any independent flate; but were at beft but a fort of corporation, which, though it had the power of enacting bye-laws for its own government, was at all times fubject to the correction. jurifdiction, and legislative authority of the mother city. The fending out a colony of this kind, not only gave fome fatisfaction to the people, but often established a fort of garrison too in-a newly conquered province, of which the obedience might otherwife have been doubtful. A Roman colony, therefore, whether we confider the nature of the eftablishment itself, or the motives for making it, was altogether different from a Greek one. The words accordingly, which in the original languages denote those different establishments, have very different meanings. The Latin word (Colonia) fignifies fimply a plantation. The Greek word  $(\alpha \pi cinia)$ on the contrary, fignifies a feparation of dwelling, a departure from home, a going out of the house. But, though the Roman colonies were in many refpects different from the Greek ones, the interest which prompted to eftablish them was equally plain and diffinct. Both inflitutions derived their origin either from irrelifible neceffity. or from clear and evident utility.

THE

THE eflablishment of the European colonies in America and the CHAP. Weft Indies arole from no necessity: and though the utility which has refulted from them has been very great, it is not altogether fo clear and evident. It was not underftood at their first establishment, and was not the motive either of that establishment or of the difcoveries which gave occasion to it, and the nature, extent, and limits of that utility are not, perhaps, well underftood at this day.

THE Venetians, during the fourteenth and fifteenth centuries, carried on a very advantageous commerce, in fpiceries, and other East India goods, which they distributed among the other nations of Europe. They purchased them chiefly in Egypt, at that time under the dominion of the Mammeluks, the enemies of the Turks, of whom the Venetians were the enemies; and this union of intereft, affifted by the money of Venice, formed fuch a connection as gave the Venetians almost a monopoly of the trade.

THE great profits of the Venetians tempted the avidity of the Portuguele. They had been endeavouring, during the courfe of the fifteenth century, to find out by fea a way to the countries from which the Moors brought them ivory and gold-duft across the Defart. They discovered the Madeiras, the Canaries, the Azores, the Cape de Verd illands, the coast of Guinea, that of Loango, Congo, Angola, and Benguela, and, finally, the Cape of Good Hope. They had long wifhed to fhare in the profitable traffick of the Venetians, and this last discovery opened to them a probable prospect of doing fo. In 1497, Vafco de Gama failed from the port of Lifbon with a fleet of four fhips, and, after a navigation of eleven months, arrived upon the coaft of Indoftan, and thus-completed a courfe of difcoveries which had been purfued with great fleadinefs, and with very little interruption, for near a century together.

IJI

152

IV.

воок Some years before this, while the expectations of Europe were in sufpence about the projects of the Portuguese, of which the fuccess appeared yet to be doubtful, a Genoese pilot formed the yet more daring project of failing to the East Indies by the west. The fituation of those countries was at that time very imperfectly known in Europe. The few European travellers who had been there had magnified the diffance; perhaps through fimplicity and ignorance, what was really very great appearing almost infinite to those who could not measure it; or, perhaps, in order to increase fomewhat more the marvellous of their own adventures in visiting regions fo immenfely remote from Europe. The longer the way was by the Eaft, Columbus very juftly concluded, the fhorter it would be by the Weft. He propofed, therefore, to take that way, as both the fhortest and the furest, and he had the good fortune to convince Isabella of Castile of the probability of his project. He failed from the port of Palos in August 1492, near five years before the expedition of Valco de Gama fet out from Portugal, and, after a voyage of between two and three months, discovered first fome of the fmall Bahama or Lucayan illands, and afterwards the great island of St. Domingo.

> But the countries which Columbus discovered, either in this or in any of his fubfequent voyages, had no refemblance to those which he had gone in quest of. Instead of the wealth, cultivation, and populousness of China and Indostan, he found, in St. Domingo, and in all the other parts of the new world which he ever visited, nothing but a country quite covered with wood, uncultivated, and inhabited only by fome tribes of naked and miferable favages. He was not very willing, however, to believe "that they were not the fame with fome of the countries defcribed by Marco Polo, the first European who had visited, or at least had left behind him, any defeription of China or the East Indies; and a very flight

#### THE WEALTH OF NATIONS.

flight refemblance, fuch as that which he found between the name of Cibao, a mountain in St. Domingo, and that of Cipango, mentioned by Marco Polo, was frequently fufficient to make him return to this favourite prepoffeffion, though contrary to the cleareft evidence. In his letters to Ferdinand and Ifabella he called the countries which he had difcovered the Indies. He entertained no doubt but that they were the extremity of thofe which had been defcribed by Marco Polo, and that they were not very diftant from the Ganges, or from the countries which had been conquered by Alexander. Even when at laft convinced that they were at no great diftance, and, in a fubfequent voyage, accordingly, went in queft of them along the coaft of Terra Firma, and towards the ifthmus of Darien.

IN confequence of this miftake of Columbus, the name of the Indies has fluck to those unfortunate countries ever fince; and when it was at last clearly discovered that the new were altogether different from the old Indies, the former were called the West, in contradistinction to the latter, which were called the East Indies.

IT was of importance to Columbus, however, that the countries which he had difcovered, whatever they were, fhould be reprefented to the court of Spain as of very great confequence; and, in what conflitutes the real riches of every country, the animal and vegetable productions of the foil, there was at that time nothing which could well juftify fuch a reprefentation of them.

THE Cori, fomething between a rat and a rabbit, and fuppofed by Mr. Buffon to be the fame with the Aperca of Brazil, was the largeft viviparous quadruped in St. Domingo. This fpecies feems never to have been very numerous, and the dogs and cats of the Spaniards are faid to have long ago almost entirely extirpated it, as Vol. II. X well

BOOK well as fome other tribes of a ftill fmaller fize. Thefe, however, together with a pretty large lizard, called the Ivana or Iguana, conflituted the principal part of the animal food which the land afforded.

> THE vegetable food of the inhabitants, though from their want of induftry not very abundant, was not altogether fo fcanty. It confifted in Indian corn, yams, potatoes, bananes, &cc. plants which were then altogether unknown in Europe, and which have never fince been very much efteemed in it, or fuppofed to yield a fuftenance equal to what is drawn from the common forts of grain and pulfe, which have been cultivated in this part of the world time out of mind.

> THE cotton plant indeed afforded the material of a very important manufacture, and was at that time to Europeans undoubtedly the moft valuable of all the vegetable productions of those islands. But though in the end of the fifteenth century the muslins and other cotton goods of the East Indies were much esteemed in every part of Europe, the cotton manufacture itself was not cultivated in any part of it. Even this production therefore, could not at that time appear in the eyes of Europeans to be of very great confequence.

> FINDING nothing either in the animals or vegetables of the newly difcovered countries, which could juftify a very advantageous reprefentation of them, Columbus turned his view towards their minerals; and in the richnefs of the productions of this third kingdom, he flattered himfelf, he had found a full compensation for the infignificancy of those of the other two. The little bits of gold with which the inhabitants ornamented their drefs, and which, he was informed, they frequently found in the rivulets and torrents that fell from the mountains, were fufficient to fatisfy

fatisfy him that those mountains abounded with the richest gold CHAP. St. Domingo, therefore, was reprefented as a country mines. abounding with gold, and, upon that account (according to the prejudices not only of the prefent times, but of those times), an inexhaustible fource of real wealth to the crown and kingdom of Spain. When Columbus, upon his return from his first voyage, was introduced with a fort of triumphal honours to the fovereigns of Castile and Arragon, the principal productions of the countries which he had discovered were carried in folemn procession before him. The only valuable part of them confifted in fome little fillets, bracelets, and other ornaments of gold, and in fome bales of cotton. The reft were mere objects of vulgar wonder and curiofity; fome reeds of an extraordinary fize, fome birds of a very beautiful plumage, and some stuffed skins of the huge alligator and manati; all of which were preceded by fix or feven of the wretched natives, whole fingular colour and appearance added greatly to the novelty of the fhew.

In confequence of the reprefentations of Columbus, the council of Castile determined to take possession of countries of which the inhabitants were plainly incapable of defending themfelves. The pious purpole of converting them to Christianity fanctified the injuffice of the project. But the hope of finding treasures of gold there, was the fole motive which prompted to undertake it; and to give this motive the greater weight, it was propofed by Columbus that the half of all the gold and filver that fhould be found there fhould belong to the crown. This propofal was approved of by the council.-

As long as the whole or the far greater part of the gold, which the first adventurers imported into Europe, was got by fo very eafy a method as the plundering of the defenceless natives, it was not perhaps very difficult to pay even this heavy tax. But when X 2

BOOK when the natives were once fairly flript of all that they had, which, in St. Domingo, and in all the other countries difcovered by Columbus, was done completely in fix or eight years, and when in order to find more it had become necessary to dig for it in the mines, there was no longer any poffibility of paying The rigorous exaction of it, accordingly, first occathis tax. fioned, it is faid, the total abandoning of the mines of St. Domingo, which have never been wrought fince. It was foon reduced therefore to a third; then to a fifth; afterwards to a tenth, and at last to a twentieth part of the gross produce of the gold mines. The tax upon filver continued for a long time to be a fifth of the grofs produce. It was reduced to a tenth only in the courfe of the prefent century. But the first adventurers do not appear to have been much interefted about filver. Nothing lefs precious than gold feemed worthy of their attention.

> ALL the other enterprizes of the Spaniards in the new world, fubfequent to thole of Columbus, feem to have been prompted by the fame motive. It was the facred thirft of gold that carried Oieda, Nicueffa, and Vafco Nugnes de Balboa, to the ifthmus of Darien, that carried Cortez to Mexico, and Almagro and Pizzarro to Chili and Peru. When thole adventurers arrived upon any unknown coaft, their firft enquiry was always if there was any gold to be found there; and according to the information which they received concerning this particular, they determined either to quit the country or to fettle in it.

> OF all those expensive and uncertain projects, however, which bring bankruptcy upon the greater part of the people who engage in them, there is none perhaps more perfectly ruinous than the fearch after new filver and gold mines. It is perhaps the most difadvantageous lottery in the world, or the one in which the gain of those who draw the prizes bears the least proportion to the loss of those who draw the blanks : for though the prizes are

are few and the blanks many, the common price of a ticket is CHAP. the whole fortune of a very rich man. Projects of mining, inflead of replacing the capital employed in them, together with the ordinary profits of flock, commonly abforb both capital and profit. They are the projects, therefore, to which of all others a prudent law-giver, who defired to increase the capital of his nation, would leaft chufe to give any extraordinary encouragement, or to turn towards them a greater fhare of that capital than what would go to them of its own accord. Such in reality is the abfurd confidence which almost all men have in their own good fortune, that wherever there is the leaft probability of fuccefs, too great a share of it is apt to go to them of its own accord.

BUT though the judgment of fober reafon and experience concerning fuch projects has always been extremely unfavourable, that of human avidity has commonly been quite otherwife. The fame paffion which has fuggefted to fo many people the abfurd idea of the philosopher's flone, has fuggefted to others the equally abfurd one of immenfe rich mines of gold and filver. They did not confider that the value of those metals has, in all ages and nations, arifen chiefly from their fcarcity, and that their fcarcity has arifen from the very fmall quantities of them which nature has any where deposited in one place, from the hard and intractable fubftances with which fhe has almost every where furrounded those fmall quantities, and confequently from the labour and expence which are every where neceffary in order to penetrate to and get at them. They flattered themselves that veins of those metals might in many places be found as large and as abundant as those which are commonly found of lead, or copper, or tin, or iron. The dream of Sir Walter Raleigh concerning the golden city and country of Eldorado, may fatisfy us, that even wife men are 1.57

VII.

are not always exempt from fuch ftrange delufions. More than a hundred years after the death of that great man, the Jefuit Gumila was ftill convinced of the reality of that wonderful country, and expressed with great warmth, and I dare to fay, with great fincerity, how happy he should be to carry the light of the gospel to a people who could fo well reward the pious labours of their misfionary.

In the countries first discovered by the Spaniards, no gold or filver mines are at prefent known which are fuppofed to be worth the working. The quantities of those metals which the first adventurers are faid to have found there, had probably been very much magnified, as well as the fertility of the mines which were wrought immediately after the first discovery. What those adventurers were reported to have found, however, was fufficient to inflame the avidity of all their countrymen. Every Spaniard who failed to America expected to find an Eldorado. Fortune too did upon this what fhe has done upon very few other occasions. She realized in fome measure the extravagant hopes of her votaries, and in the difcovery and conqueft of Mexico and Peru (of which the one happened about thirty, the other about forty years after the first expedition of Columbus) she prefented them with something not very unlike that profusion of the precious metals which they fought for.

A PROJECT of commerce to the East Indies, therefore, gave occasion to the first difcovery of the West. A project of conquest gave occasion to all the establishments of the Spaniards in those newly discovered countries. The motive which excited them to this conquest was a project of gold and filver mines; and a course of accidents, which no human wisdom could forefee, rendered this project much more successful than the undertakers had any reasonable grounds for expecting.

+

-158

BOOK

THE

THE first adventurers of all the other nations of Europe, who attempted to make fettlements in America, were animated by the like chimerical views; but they were not equally fuccefsful. It was more than a hundred years after the first fettlement of the Brazils, before any filver, gold, or diamond mines were difcovered there. In the English, French, Dutch, and Danish colonies, none have ever yet been discovered; at least none that are at prefent supposed to be worth the working. The first English fettlers in North America, however, offered a fifth of all the gold and filver which should be found there to the king, as a motive for granting them their patents. In the patents to Sir Walter Raleigh, to the London and Plymouth companies, to the council of Plymouth, &c. this fifth was accordingly referved to the crown. To the expectation of finding gold and filver mines, those first fettlers too joined that of discovering a north west passage to the East Indies. They have hitherto been disappointed in both.

#### PART SECOND.

# Causes of the prosperity of new Colonies.

THE colony of a civilized nation which takes poffeffion, either of a waste country, or of one so thinly inhabited, that the natives easily give place to the new settlers, advances more rapidly to wealth and greatness than any other human society.

THE colonifts carry out with them a knowledge of agriculture and of other useful arts, superior to what can grow up of its own accord in the course of many centuries among favage and barbarous nations. They carry out with them too the habit of subordination, fome notion of the regular government which takes place in their own country, of the softem of laws which support it, and of a regular administration of justice; and they naturally establish fomething of the same kind in the new settlement. But among savage and

CHAP. VII.

BOOK IV.

160

and barbarous nations, the natural progress of law and government is still flower than the natural progress of arts, after law and government have been so far established, as is necessary for their protection. Every colonift gets more land than he can poffibly cultivate. He has no rent, and fcarce any taxes to pay. No landlord fhares with him in its produce, and the fhare of the fovereign is commonly but a trifle. He has every motive to render as great as possible a produce, which is thus to be almost entirely his own. But his land is commonly fo extensive, that with all his own induftry, and with all the induftry of other people whom he can get to employ, he can feldom make it produce the tenth part of what it is capable of producing. He is eager, therefore, to collect labourers from all quarters, and to reward them with the most liberal wages. But those liberal wages, joined to the plenty and cheapnefs of land, foon make those labourers leave him in order to become landlords themfelves, and to reward, with equal liberality, other labourers, who foon leave them for the fame reafon that they left their first master. The liberal reward of labour encourages marriage. The children, during the tender years of infancy, are well fed and properly taken care of, and when they are grown up, the value of their labour greatly over-pays their maintenance. When arrived at maturity, the high price of labour, and the low price of land, enable them to establish themselves in the same manner as their fathers did before them.

In other countries, rent and profit eat up wages, and the two fuperior orders of people opprefs the inferior one. But in new colonies, the intereft of the two fuperior orders obliges them to treat the inferior one with more generofity and humanity; at leaft, where that inferior one is not in a flate of flavery. Wafte lands, of the greateft natural fertility, are to be had for a trifle. The increase of revenue which the proprietor, who is always the undertaker, expects

pects from their improvement, conflitutes his profit; which in thefe circumftances is commonly very great. But this great profit cannot be made without employing the labour of other people in clearing and cultivating the land; and the difproportion between the great extent of the land and the fmall number of the people, which commonly takes place in new colonies, makes it difficult for him to get this labour. He does not, therefore, difpute about wages, but is willing to employ labour at any price. The high wages of labour encourage population. The cheapnels and plenty of good land encourage improvement, and enable the proprietor to pay those high wages. In those wages confist almost the whole price of the land; and though they are high, confidered as the wages of labour, they are low, confidered as the price of what is fo very valuable. What encourages the progress of population and improvement, encourages that of real wealth and greatnefs.

THE progress of many of the antient Greek colonies towards wealth and greatnefs, feems accordingly to have been very rapid. In the course of a century or two, several of them appear to have rivalled and even to have furpaffed their mother cities. Syracufe and Aggrigentum in Sicily, Tarentum and Locri in Italy, Ephefus and Miletus in Leffer Afia, appear by all accounts to have been at least equal to any of the cities of antient Greece. Though posterior in their establishment, yet all the arts of refinement, philofophy, poetry, and eloquence feem to have been cultivated as early, and to have been improved as highly in them, as in any part of the mother country. The schools of the two oldest Greek philosophers, those of Thales and Pythagoras, were established, it is remarkable, not in antient Greece, but the one in an Afiatick, the other in an Italian colony. All those colonies had established themfelves in countries inhabited by favage and barbarous nations, who eafily gave place to the new fettlers. They had plenty of good land, VOL. II. Y and

161

C H A P. VII.

<sup>B</sup> O O K and as they were altogether independent of the mother city, they IV. were at liberty to manage their own affairs in the way that they judged was most fuitable to their own interest.

> THE hiftory of the Roman colonies is by no means fo brilliant. Some of them, indeed, fuch as Florence, have in the courfe of many ages, and after the fall of the mother city, grown up to be confiderable flates. But the progrefs of no one of them feems ever to have been very rapid. They were all eftablifhed in conquered provinces, which in most cafes had been fully inhabited before. The quantity of land affigned to each colonist was feldom very confiderable, and as the colony was not independent, they were not always at liberty to manage their own affairs in the way that they judged was most fuitable to their own interest.

In the plenty of good land, the European colonies eftablished in America and the West Indies refemble, and even greatly surpass those of ancient Greece. In their dependency upon the mother flate, they refemble those of antient Rome; but their great distance from Europe has in all of them alleviated more or lefs the effects of this dependency. Their fituation has placed them lefs in the view and lefs in the power of their mother country. In purfuing their intereft their own way, their conduct has, upon many occasions, been over-looked, either becaufe not known or not understood in Europe; and upon fome occasions it has been fairly fuffered and fubmitted to, becaufe their diftance rendered it difficult to reftrain it. Even the violent and arbitrary government of Spain has, upon many occasions, been obliged to recall or fosten the orders which had been given for the government of her colonies, for fear of a general infurrection. The progress of all the European colonies in wealth, population, and improvement, has accordingly been very great.

THE

## THE WEALTH OF NATIONS.

THE crown of Spain, by its fliare of the gold and filver, derived fome revenue from its colonies, from the moment of their first establifhment. It was a revenue too, of a nature to excite in human avidity the most extravagant expectations of still greater riches. The Spanish colonies, therefore, from the moment of their first establifhment, attracted very much the attention of their mother country; while those of the other European nations were for a long time in a great measure neglected. The former did not, perhaps, thrive the better in confequence of this attention; nor the latter the worfe in confequence of this neglect. In proportion to the extent of the country which they in fome measure possifies, the Spanish colonies are confidered as lefs populous and thriving than those of almost any other European nation. The progress even of the Spanish colonies, however, in population and improvement, has certainly been very rapid and very great. The city of Lima, founded fince the conquest, is represented by Ulloa, as containing fifty thousand inhabitants near thirty years ago. Quito, which had been but a miferable hamlet of Indians, is reprefented by the fame author as in his time equally populous. Gemelli Carreri, a pretended traveller, it is faid, indeed, but who feems every where to have written upon extreme good information, reprefents the city of Mexico as containing a hundred thousand inhabitants; a number which, in fpite of all the exaggerations of the Spanish writers, is, probably, more than five times greater than what it contained in the time of Montezuma. These numbers exceed greatly those of Bofton, New York, and Philadelphia, the three greateft cities of the English colonies. Before the conquest of the Spaniards there were no cattle fit for draught, either in Mexico or Peru. The lama was their only beaft of burden, and its ftrength feems to have been a good deal inferior to that of a common afs. The plough was unknown among them. They were ignorant of the use of iron. They had no coined money, nor any established instrument of commerce of any kind. Their commerce was carried on by barter. A fort

Y 2

163

C H A P. VII.

of

164

of wooden spade was their principal instrument of agriculture. BOOK Sharp flones ferved them for knives and hatchets to cut with; fifh bones and the hard finews of certain animals ferved them for needles to few with; and these feem to have been their principal instruments of trade. In this flate of things, it feems impoffible, that either of those empires could have been fo much improved or fo well cultivated as at prefent, when they are plentifully furnished with all forts of European cattle, and when the use of iron, of the plough, and of many of the arts of Europe, has been introduced among them. But the populoufnefs of every country must be in proportion to the degree of its improvement and cultivation. In fpite of the crucl deftruction of the natives which followed the conqueft, these two great empires are, probably, more populous now than they ever were before : and the people are furely very different; for we muftacknowledge, I apprehend, that the Spanish creoles are in many refpects fuperior to the antient Indians.

> AFTER the fettlements of the Spaniards, that of the Portugueze in Brazil is the oldeft of any European nation in America. But as for a long time after the first discovery, neither gold nor filver mines were found in it, and as it afforded, upon that account, little or no revenue to the crown, it was for a long time in a great measure neglected; and during this flate of neglect, it grew up to be a great and powerful colony. While Portugal was under the dominion of Spain, Brazil was attacked by the Dutch, who got pofferfion of feven of the fourteen provinces into which it is divided. They expected foon to conquer the other feven, when Portugal recovered its independency by the elevation of the family of Braganza to the throne. The Dutch then, as enemies to the Spaniards, became friends to the Portugueze, who were likewife the enemies of the Spaniards. They agreed, therefore, to leave that part of Brazil, which they had not conquered, to the king of Portugal, who agreed to leave that part which they had conquered to them, as a matter

> > 4

not

### THE WEALTH OF NATIONS.

not worth difputing about with fuch good allies. But the Dutch government foon began to opprefs the Portugueze colonifts, who, inftead of amufing themfelves with complaints, took arms againft their new mafters, and by their own valour and refolution, with the connivance, indeed, but without any avowed affiftance from the mother country, drove them out of Brazil. The Dutch, therefore, finding it impoffible to keep any part of the country to themfelves, were contented that it fhould be entirely reftored to the crown of Portugal. In this colony there are faid to be more than fix hundred thoufand people, either Portugueze or defcended from Portugueze, creoles, mulattoes, and a mixed race between Portugueze and Brazilians. No one colony in America is fuppofed to contain fo great a number of people of European extraction.

TOWARDS the end of the fifteenth, and during the greater part of the fixteenth century, Spain and Portugal were the two great naval powers upon the ocean; for though the commerce of Venice extended to every part of Europe, its fleets had fcarce ever failed beyond the Mediterranean. The Spaniards, in virtue of the first. difcovery, claimed all America as their own; and though they could not hinder fo great a naval power as that of Portugal from fettling in Brazil, fuch was, at that time, the terror of their name, that the greater part of the other nations of Europe were afraid to establish themfelves in any other part of that great continent. The French, who attempted to fettle in Florida, were all murdered by the Spaniards. But the declenfion of the naval power of this latter nation, in confequence of the defeat or mifcarriage of, what they called, their Invincible Armada, which happened towards the end of the fixteenth century, put it out of their power to obstruct any longer the settlements of the other European nations. In the course of the feventeenth century, therefore, the English, French, Dutch, Danes, and Swedes, all the great nations who had any ports upon the ocean, attempted to make fome fettlements in the new world.

THE

BOOK IV.

THE Swedes eftablished themfelves in New Jerfey; and the number
 of Swedish families still to be found there, fufficiently demonstrates, that this colony was very likely to prosper, had it been protected by the mother country. But being neglected by Sweden, it was soon fwallowed up by the Dutch colony of New York, which again, in 1674, fell under the dominion of the English.

THE fmall islands of St. Thomas and Santa Cruz are the only countries in the new world that have ever been posseled by the Danes. These little fettlements too were under the government of an exclusive company, which had the fole right, both of purchasing the furplus produce of the colonists, and of fupplying them with fuch goods of other countries as they wanted, and which, therefore, both in its purchases and fales, had not only the power of oppressing them, but the greatest temptation to do fo. The government of an exclusive company of merchants, is, perhaps, the worst of all governments for any country whatever. It was not, however, able to ftop altogether the progress of these colonics, though it rendered it more flow and languid. The late king of Denmark diffolved this company, and fince that time the prosperity of these colonies has been very great.

THE Dutch fettlements in the Weft, as well as those in the East Indies, were originally put under the government of an exclusive company. The progress of some of them, therefore, though it has been confiderable, in comparison with that of almost any country that has been long peopled and eftablished, has been languid and flow in comparison with that of the greater part of new colonies. The colony of Surinam, though very confiderable, is still inferior to the greater part of the fugar colonies of the other European nations. The colony of Nova Belgia, now divided into the two provinces of New York and New Jersey, would probably have foon become confiderable too, even though it had remained under the government

vernment of the Dutch. The plenty and cheapnefs of good land are fuch powerful causes of prosperity, that the very worst government is fcarce capable of checking altogether the efficacy of their operation. The great diffance too from the mother country would enable the colonifts to evade more or lefs by fmuggling the monopoly which the company enjoyed against them. At prefent the company allows all Dutch fhips to trade to Surinam upon paying two and a half per cent. upon the value of their cargo for a licence; and only referves to itfelf exclusively the direct trade from Africa to America, which confifts almost entirely in the flave trade. This relaxation in the exclusive privileges of the company, is probably the principal caufe of that degree of prosperity which that colony at prefent enjoys. Curaçoa and Euftatia, the two principal islands belonging to the Dutch, are free ports open to the fhips of all nations; and this freedom, in the midft of better colonies whole ports are open to those of one nation only, has been the great cause of the prosperity of those two barren islands.

THE French colony of Canada was, during the greater part of the laft century, and fome part of the prefent, under the government of an exclusive company. Under fo unfavourable an administration its progrefs was neceffarily very flow in comparison with that of other new colonies; but it became much more rapid when this company was diffolved after the fall of what is called the Miffiffipi fcheme. When the English got possefficient of this country, they found in it near double the number of inhabitants which father Charlevoix had affigned to it between twenty and thirty years before. That jesuit had travelled over the whole country, and had no inclination to reprefent it as less confiderable than it really was.

THE French colony of St. Domingo was established by pirates and free-booters, who, for a long time, neither required the protection<sub>3</sub>. C H A P. VH.

ВООК tection, nor acknowledged the authority of France; and when that race of banditti became fo far citizens as to acknowledge this authority, it was for a long time neceffary to exercise it with very great gentlenefs. During this period the population and improvement of this colony increased very fast. Even the oppression of the exclusive company, to which it was for fome time fubjected, with all the other colonies of France, though it no doubt retarded, had not been able to ftop its progrefs altogether. The courfe of its profperity returned as foon as it was relieved from that oppreffion. It is now the most important of the fugar colonies of the West Indies, and its produce is faid to be greater than that of all the English fugar colonies put together. The other fugar colonies of France are in general all very thriving.

> But there are no colonies of which the progress has been more rapid than that of the English in North America.

> PLENTY of good land, and liberty to manage their own affairs their own way, feem to be the two great caufes of the profperity of all new colonies.

> In the plenty of good land the English colonies of North America, though, no doubt, very abundantly provided, are, however, inferior to those of the Spaniards and Portugueze, and not superior to fome of those possessed by the French before the late war. But the political inftitutions of the English colonies have been more favourable to the improvement and cultivation of this land, than those of any of the other three nations.

FIRST, the engroffing of uncultivated land, though it has by no means been prevented altogether, has been more reftrained in the English colonies than in any other. The colony law which impofes

168

IV.

pofes upon every proprietor the obligation of improving and cultivating, within a limited time, a certain proportion of his lands, and which, in cafe of failure, declares those neglected lands grantable to any other perfon; though it has not, perhaps, been very firictlyexecuted, has, however, had fome effect.

\* SECONDLY, in Penfylvania, there is no right of primogeniture, and lands, like moveables, are divided equally among all the children of the family. Y In three of the provinces of New England the oldeft has only a double fhare, as in the Mofaical law. ' Though in those provinces, therefore, too great a quantity of land should fometimes be engroffed by a particular individual, it is likely, in the course of a generation or two, to be fufficiently divided again. In the other English colonies, indeed, the right of primogeniture takes place, as in the law of England. But in all the English colonies the tenure of their lands, which are all held by free focage, facilitates alienation, and the grantee of any extensive tract of land generally finds it for his interest to alienate, as fast as he can, the greater part of it, referving only a fmall quit-rent. In the Spanish and Portuguese colonies, what is called the right of Majorazzo \* takes place in the fucceffion of all those great effates to which any title of honour is annexed. Such effates go all to one perfon, and are in effect entailed and unalienable. The French colonies, indeed, are fubject to the cuftom of Paris, which, in the inheritance of land, is much more favourable to the younger children than the law of England. But, in the French colonies, if any part of an eftate, held by the noble tenure of chivalry and homage, is alienated, it is, for a limited time, fubject to the right of redemption, either by the heir of the fuperior or by the heir of the family; and all the largest estates of the country are held by fuch noble tenures, which neceffarily embarrafs alienation. But, in a new colony, a great uncultivated effate is likely to be much

Vol. II.

\* Jus Majoratus. Za

more

\* Notso at this day.

BOOK more fpeedily divided by alienation than by fucceffion. The plenty and cheapnefs of good land, it has already been obferved, are the principal causes of the rapid prosperity of new colonies. The engroffing of land, in effect, deftroys this plenty and cheapnefs. The engroffing of uncultivated land, befides, is the greatest obstruction to its improvement. But the labour that is employed in the improvement and cultivation of land affords the greatest and most valuable produce to the fociety. The produce of labour, in this cafe, pays not only its own wages, and the profit of the flock which employs it, but the rent of the land too upon which it is employed. The labour of the English colonists, therefore, being more employed in the improvement and cultivation of land, is likely to afford a greater and more valuable produce than that of any of the other three nations, which, by the engroffing of land, is more or lefs diverted towards other employments.

> THIRDLY, the labour of the English colonists is not only likely to afford a greater and more valuable produce, but, in confequence of the moderation of their taxes, a greater proportion of this produce belongs to themfelves, which they may flore up and employ in putting into motion a still greater quantity of labour. The English colonifts have never yet contributed any thing towards the defence of the mother country, or towards the fupport of its civil government. They themfelves, on the contrary, have hitherto been defended almost entirely at the expence of the mother country. But the expence of fleets and armies is out of all proportion greater than the neceffary expence of civil government. The expence of their own civil government has always been very moderate. It has generally been confined to what was necessary for paying competent falaries to the governor, to the judges, and to some other officers of police, and for maintaining a few of the most useful public works. The expence of the civil establishment of Massachusett's Bay, before the commencement of the present diffurbances, used to be but about 18,000].

18,0001. a.year. That of New Hampshire and Rhode Island 3,5001. CHAP. each. That of Connecticut 4,000 l. That of New York and Penfylvania 4,5001. each. That of New Jerley 1,2001. That of Virginia and South Carolina 8,000 l. each. The civil citablishment of Nova Scotia and Georgia are partly fupported by an annual grant of parliament. But Nova Scotia pays, besides, about 7,000 l. a year towards the public expences of the colony; and Georgia about 2,5001. a year. All the different civil establishments in North America, in fhort, exclusive of those of Maryland and North Carolina, of which no exact account has been got, did not, before the commencement of the prefent diffurbances, coft the inhabitants above 64,7001. a year; an ever memorable example at how fmall an expence three millions of people may not only be governed, but well' governed. The most important part of the expence of government, indeed, that of defence and protection, has conftantly fallen upon the mother country. The ceremonial too of the civil government inthe colonies, upon the reception of a new governor, upon the opening of a new affembly, &c. though fufficiently decent, is not accompanied with any expensive pomp or parade. Their ecclesiaftical government is conducted upon a plan equally frugal. Tithes are unknown among them; and their clergy, who are far from being numerous, are maintained either by moderate flipends, or by the voluntary contributions of the people. The power of Spain and Portugal, on the contrary, derives fome fupport from the taxes levied upon their colonies. France, indeed, has never drawn any confiderable revenue from its colonies, the taxes which it levies upon them being generally fpent among them. But the colony government of all these three nations is conducted upon a much more expensive plan, and is accompanied with a much more expensive ceremonial. The fums spent upon the reception of a new viceroy of Peru, for example, have frequently been enormous. Such ceremonials are not only real taxes paid by the rich colonifts upon those particular occasions, ZS but

I7F

172 воок.

but they ferve to introduce among them the habit of vanity and expence upon all other occafions. They are not only very grievous occafional taxes, but they contribute to eftablifh perpetual taxes of the fame kind ftill more grievous; the ruinous taxes of private luxury and extravagance. In the colonies of all those three nations too the ecclessifical government is extremely opprefive. Tithes take place in all of them, and are levied with the utmost rigour in those of Spain and Portugal. All of them besides are opprefied with a numerous race of mendicant friars, whose beggary being not only licensed, but confectated by religion, is a most grievous tax upon the poor people, who are most carefully taught that it is a duty to give, and a very great fin to refuse them their charity. Over and above all this the clergy are, in all of them, the greatest engrosfiers of land.

FOURTHLY, in the difpofal of their furplus produce, or of what is over and above their own confumption, the English colonies have been more favoured, and have been allowed a more extensive market than those of any other European nation. Every European nation has endeavoured more or less to monopolize to itself the commerce of its colonies, and, upon that account, has prohibited the ships of foreign nations from trading to them, and has prohibited them from importing European goods from any foreign nation. But the manner in which this monopoly has been exercised in different nations has been very different.

Some nations have given up the whole commerce of their colonies to an exclusive company, of whom the colonists were obliged to buy all fuch European goods as they wanted, and to whom they were obliged to fell the whole of their own furplus produce. It was the interest of the company, therefore, not only to fell the former as dear, and to buy the latter as cheap as possible, but to buy no no more of the latter, even at this low price, than what they CHAP. could difpose of for a very high price in Europe. It was their interest, not only to degrade in all cases the value of the furplus produce of the colony, but in many cafes to difcourage and keep down the natural increase of its quantity. Of all the expedients that can well be contrived to funt the natural growth of a new colony, that of an exclusive company is undoubtedly the most effectual. This, however, has been the policy of Holland, though their company in the course of the present century, has given up in many refpects the exertion of their exclusive privilege. This too was the policy of Denmark till the reign of the late king. It has occasionally been the policy of France, and of late, fince 1755, after it had been abandoned by all other nations, on account of its abfurdity, it has become the policy of Portugal with regard at least to two of the principal provinces of Brazil, Fernumbuco and Marannon.

OTHER nations, without establishing an exclusive company, have confined the whole commerce of their colonies to a particular port of the mother country, from whence no ship was allowed to fail, but either in a fleet and at a particular feason, or, if fingle, in confequence of a particular licence, which in most cafes was very well paid for. This policy opened, indeed, the trade of the colonies to all the natives of the mother country, provided they traded from the proper port, at the proper feafon, and in the proper veffels. But as all the different merchants, who joined their flocks in order to fit out those licenfed veffels, would find it for their interest to act in concert, the trade which was carried on in this manner would neceffarily be conducted very nearly upon the fame principles as that of an exclusive company. The profit of those merchants would be almost equally exorbitant and oppreffive. The colonies would be ill fupplied, and would be obliged both to buy very dear, and to fell very cheap. This, however,

174 воок

however, till within thefe few years, had always been the policy of Spain, and the price of all European goods, accordingly, is faid to have been enormous in the Spanifh Weft Indies. At Quito, we are told by Ulloa, a pound of iron fold for about four and fixpence, and a pound of fleel for about fix and nine-pence flerling. But it is chiefly in order to purchafe European goods, that the colonies part with their own produce. The more, therefore, they pay for the one, the lefs they really get for the other, and the dearnefs of the one is the fame thing with the cheapnefs of the other. The policy of Portugal is in this refpect the fame as the ancient policy of Spain, with regard to all its colonies, except Fernambuco and Marannon, and with regard to thefe it has lately adopted a ftill worfe.

OTHER nations leave the trade of their colonies free to all their fubjects who may carry it on from all the different ports of the mother country, and who have occasion for no other licence than the common difpatches of the cuftomhouse. In this case the number and dispersed fituation of the different traders renders it impossible for them to enter into any general combination, and their competition is fufficient to hinder them from making very exorbitant profits. Under fo liberal a policy the colonies are enabled both to fell their own produce and to buy the goods of Europe at a reafonable price. But fince the diffolution of the Plymouth company, when our colonies were but in their infancy, this has always been the policy of England. It has generally too been that of France, and has been uniformly fo fince the diffolution of what, in England, is commonly called their Miffifippi company. The profits of the trade therefore which France and England carry on with their colonies, though no doubt fomewhat higher than if the competition was free to all other nations, are, however, by no means exorbitant; and the price of European goods accordingly is not extravagantly high in the greater part of the colonies of either of those nations.

IN

In the exportation of their own furplus produce too it is only C H A P. with regard to certain commodities that the colonies of Great Britain are confined to the market of the mother country. Thefe commodities having been enumerated in the Act of navigation and in fome other fubfequent acts, have upon that account been called enumerated commodities. The reft are called non-enumerated; and may be exported directly to other countries, provided it is in Britifh or Plantation fhips of which the owners and three-fourths of the mariners are Britifh fubjects.

AMONG the non-enumerated commodities are fome of the most important productions of America and the West Indies; grain of all forts, lumber, falt provisions, fish, sugar, and rum.

GRAIN is naturally the first and principal object of the culture of all new colonies. By allowing them a very extensive market for it, the law encourages them to extend this culture much beyond the confumption of a thinly inhabited country, and thus to provide beforehand an ample subsistence for a continually increasing population.

IN a country quite covered with wood, where timber confequently is of little or no value, the expence of clearing the ground is the principal obftacle to improvement. By allowing the colonies a very extensive market for their lumber, the law endeavours to facilitate improvement by raifing the price of a commodity which would otherwife be of little value, and thereby enabling them to make fome profit of what would otherwife be mere expence.

IN a country neither half peopled nor half cultivated, cattlenaturally multiply beyond the confumption of the inhabitants, and are often upon that account of little or no value. But it is neceffary,

neceffary, it has already been fhewn, that the price of cattle fhould bear a certain proportion to that of corn before the greater part of the lands of any country can be improved. By allowing to American cattle, in all fhapes, dead and alive, a very extensive market the law endeavours to raife the value of a commodity of which the high price is fo very effential to improvement. The good effects of this liberty, however, muft be fomewhat diminished by the 4th of George III. c. 15. which puts hides and shins among the enumerated commodities, and thereby tends to reduce the value of American cattle.

To increase the shipping and naval power of Great Britain, by the extension of the fisheries of our colonies, is an object which the legislature feems to have had almost constantly in view. Those fisheries, upon this account, have had all the encouragement which freedom can give them, and they have flourished accordingly. The New-England fishery in particular was, before the late diffurbances, one of the most important, perhaps, in the world. The whale-fifhery which, notwithstanding an extravagant bounty, is in Great Britain carried on to fo little purpofe, that in the opinion of many people (which I do not, however, pretend to warrant) the whole produce does not much exceed the value of the bounties which are annually paid for it, is in New-England carried on without any bounty to a very great extent. Fish is one of the principal articles with which the North Americans trade to Spain, Portugal and the Mediterranean.

SUGAR was originally an enumerated commodity which could be exported only to Great Britain. But in 1731, upon a reprefentation of the fugar-planters, its exportation was permitted to all parts of the world. The refiricions, however, with which this liberty was granted, joined to the high price of fugar in Great Britain, have rendered it, in a great measure, ineffectual. Great Britain and

176

BOOK

and her colonies, ftill continue to be almost the fole market for all the fugar produced in the British plantations. Their confumption increases fo fast that, though in confequence of the increasing improvement of Jamaica as well as of the Ceded Islands, the importation of fugar has increased very greatly within these twenty years, the exportation to foreign countries is faid to be not much greater than before.

RUM is a very important article in the trade which the Americans carry on to the coaft of Africa, from which they bring back negroe flaves in return.

IF the whole furplus produce of America in grain of all forts, in falt provisions and in fifh, had been put into the enumeration, and thereby forced into the market of Great Britain, it would have interfered too much with the produce of the induftry of our own people. It was probably not fo much from any regard to the intereft of America, as from a jealouly of this interference, that those important commodities have not only been kept out of the enumeration, but that the importation into Great Britain of all grain, except rice, and of falt provisions, has, in the ordinary flate of the law, been prohibited.

THE non-enumerated commodities could originally be exported to all parts of the world. Lumber and rice, having been once put into the enumeration, when they were afterwards taken out of it, were confined, as to the European market, to the countries that lie fouth of Cape Finisterre. By the 6th of George III. c. 52. all non-enumerated commodities were subjected to the like refiriction. The parts of Europe which lie fouth of Cape Finisterre, are not manufacturing countries, and we were less jealous of the colony ships carrying home from them any manufactures which could interfere with our own.

VOL. II.

A a

THE

C H A P. VII.

178

BOOK

THE enumerated commodities are of two forts: first, such as are either the peculiar produce of America, or as cannot be produced, or at least are not produced in the mother country. Of this kind are melasses, coffee, cacao-nuts, tobacco, pimento, ginger, whale-fins, raw filk, cotton-wool, beaver, and other peltry of America, indigo, fuflick, and other dying woods : fecondly, fuch as are not the peculiar produce of America, but which are and may be produced in the mother country, though not in fuch quantities as to fupply the greater part of her demand, which is principally supplied from foreign countries. Of this kind are all naval stores, masts, yards, and bowsprits, tar, pitch, and turpentine, pig and bar iron, copper ore, hides and fkins, pot and pearl ashes. The largest importation of commodities of the first kind could not discourage the growth or interfere with the fale of any part of the produce of the mother country. By confining them to the home market, our merchants, it was expected; would not only be enabled to buy them cheaper in the Plantations, and confequently to fell them with a better profit at home, but to establish between the Plantations and foreign countries an advantageous carrying trade, of which Great Britain was neceffarily tobe the center or emporium, as the European country into which those commodities were first to be imported. The importation of commodities of the fecond kind might be fo managed too, it was fuppofed, as to interfere, not with the fale of those of the fame kind which were produced at home, but with that of those which were imported from foreign countries; because, by means of proper duties, they might be rendered always fomewhat dearer than the former, and yet a good deal cheaper than the latter. By confining fuch commodities to the home market, therefore, it was proposed to discourage the produce, not of Great Britain, but of some foreign countries with which the balance of trade was believed to be unfavourable to Great Britain,

8

THE

THE prohibition of exporting from the colonies, to any other CHAP. country but Great Britain, masts, yards, and bowsprits, tar, pitch, and turpentine, naturally tended to lower the price of timber in the colonies, and confequently to increase the expence of clearing their lands, the principal obstacle to their improvement. But about the beginning of the prefent century, in 1703, the pitch and tar company of Sweden endeavoured to raife the price of their commodities to Great Britain, by prohibiting their exportation, except in their own fhips, at their own price, and in fuch quantities as they thought proper. In order to counteract this notable piece of mercantile policy, and to render herfelf as much as poffible independent, not only of Sweden, but of all the other northern powers, Great Britain gave a bounty upon the importation of naval stores from America, and the effect of this bounty was to raife the price of timber in America, much more than the confinement to the home market could lower it; and as both regulations were enacted at the fame time, their joint effect was rather to encourage than to difcourage the clearing of land in America.

THOUGH pig and bar iron too have been put among the enumerated commodities, yet as, when imported from America, they are exempted from confiderable duties to which they are fubject when imported from any other country, the one part of the regulation contributes more to encourage the erection of furnaces in America, than the other to difcourage it. There is no manufacture which occasions fo great a confumption of wood as a furnace, or which can contribute fo much to the clearing of a country overgrown with it.

THE tendency of fome of these regulations to raise the value of timber in America, and thereby to facilitate the clearing of the land, was neither, perhaps, intended nor understood by A a 2 the

EOOK IV. the legislature. Though their beneficial effects, however, have been in this respect accidental, they have not upon that account been less real.

THE most perfect freedom of trade is permitted between the British colonies of America and the West Indies, both in the enumerated and in the non-enumerated commodities. Those colonies are now become so populous and thriving, that each of them finds in some of the others a great and extensive market for every part of its produce. All of them taken together, they make a great internal market for the produce of one another.

THE liberality of England, however, towards the trade of her colonies has been confined chiefly to what concerns the market for their produce, either in its rude flate, or in what may be called the very first flage of manufacture. The more advanced or more refined manufactures even of the colony produce, the merchants and manufacturers of Great Britain chuse to referve to themselves, and have prevailed upon the legislature to prevent their establishment in the colonies, fometimes by high duties, and fometimes by abfolute prohibitions.

WHILE, for example, Muſkovado ſugars from the Britiſh plantations, pay upon importation only 6 s. 4 d. the hundred weight; white fugars pay 1 l. 1 s. 1 d.; and refined, either double or fingle, in loaves 4 l. 2 s. 5 d.  $\frac{8}{2 \cdot c}$ . When those high duties were imposed, Great Britain was the fole, and the fill continues to be the principal market to which the fugars of the Britiſh colonies could be exported. They amounted, therefore, to a prohibition, at first of claying or refining fugar for any foreign market, and at prefent of claying or refining it for the market, which takes off, perhaps, more than nine-tenths of the whole produce. The manufacture of claying or refining fugar accordingly,

ingly, though it has flourished in all the fugar colonies of France, has been little cultivated in any of those of England, except for the market of the colonies themselves. While Grenada was in the hands of the French, there was a refinery of sugar, by claying at least, upon almost every plantation. Since it fell into those of the English, almost all works of this kind have been given up, and there are at present, October 1773, I am affured, not above two or three remaining in the island. At present, however, by an indulgence of the custom-house, clayed or refined source, is commonly imported as Muskovado.

WHILE Great Britain encourages in America the manufactures of pig and bar iron, by exempting them from duties to which the like commodities are fubject when imported from any other country, fhe impofes an abfolute prohibition upon the erection of fteel furnaces and flit-mills in any of her American plantations. She will not fuffer her colonifts to work in those more refined manufactures even for their own confumption; but infifts upon their purchasing of her merchants and manufacturers all goods of this kind which they have occasion for.

SHE prohibits the exportation from one province to another by water, and even the carriage by land upon horfeback or in a cart, of hats, of wools and woollen goods, of the produce of America; a regulation which effectually prevents the eftablifhment of any manufacture of fuch commodities for diftant fale, and confines the industry of her colonists in this way to fuch coarfe and household manufactures, as a private family commonly makes for its own use, or for that of fome of its neighbours in the fame province.

To prohibit a great people, however, from making all that they can of every part of their own produce, or from employing their flock and

and industry in the way that they judge most advantageous to them-BOOK felves, is a manifest violation of the most facred rights of mankind. Unjust, however, as fuch prohibitions may be, they have not hitherto been very hurtful to the colonies. Land is still fo cheap, and, confequently, labour fo dear among them, that they can import from the mother country, almost all the more refined or more advanced manufactures cheaper than they could make them for themfelves. Though they had not, therefore, been prohibited from establishing fuch manufactures, yet in their present state of improvement, a regard to their own interest would, probably, have prevented them from doing fo. In their prefent flate of improvement, those prohibitions, perhaps, without cramping their industry, or reftraining it from any employment to which it would have gone of its own accord, are only impertinent badges of flavery impofed upon them, without any fufficient reafon, by the groundlefs jealoufy of the merchants and manufacturers of the mother country. In a more advanced flate they might be really oppreffive and infupportable.

> GREAT Britain too, as fhe confines to her own market fome of the moft important productions of the colonies, fo in compenfation fhe gives to fome of them an advantage in that market; fometimes by impofing higher duties upon the like productions when imported from other countries, and fometimes by giving bounties upon their importation from the colonies. In the firft way fhe gives an advantage in the home-market to the fugar, tobacco, and iron of her own colonies, and in the fecond to their raw filk, to their hemp and flax, to their indigo, to their naval flores and to their buildingtimber. This fecond way of encouraging the colony produce by bounties upon importation, is, fo far as I have been able to learn, peculiar to Great Britain. The firft is not. Portugal does not content herfelf with impofing higher duties upon the importation of tobacco

tobacco from any other country, but prohibits it under the fevereft C H A P. penalties.

WITH regard to the importation of goods from Europe, England has likewife dealt more liberally with her colonies than any other nation.

GREAT Britain allows a part, almost always the half, generally a larger portion, and fometimes the whole of the duty which is paid upon the importation of foreign goods, to be drawn back upon their exportation to any foreign country. No independent foreign country, it was eafy to forefee, would receive them if they came to it loaded with the heavy duties to which almost all foreign goods are fubjected on their importation into Great Britain. Unless, therefore, fome part of those duties was drawn back upon exportation, there was an end of the carrying trade; a trade fo much favoured by the mercantile fystem.

OUR colonies, however, are by no means independent foreign. countries; and Great Britain having affumed to herfelf the exclusive right of fupplying them with all goods from Europe, might have: forced them (in the fame manner as other countries have done their colonies) to receive fuch goods, loaded with all the fame duties which they paid in the mother country. But, on the contrary,till 1763, the fame drawbacks were paid upon the exportation of the greater part of foreign goods to our colonies as to any independent foreign country. In 1763, indeed, by the th of George III. c. 15. this indulgence was a good deal abated, and it was enacted, " That no part of the duty called the old fublidy fhould be drawn-" back for any goods of the growth, production, or manufacture " of Europe or the East Indies, which should be exported from-" this kingdom to any British colony or plantation in America; " wines, white callicoes and muflins excepted." Before this law, many different forts of foreign goods might have been bought cheaper

BOOK cheaper in the plantations than in the mother country; and fome IV. may ftill.

> OF the greater part of the regulations concerning the colony trade, the merchants who carry it on, it must be observed, have been the principal advifers. We must not wonder, therefore, if, in the greater part of them, their interest has been more confidered than either that of the colonies or that of the mother country. In their exclusive privilege of fupplying the colonies with all the goods which they wanted from Europe, and of purchasing all fuch parts of their furplus produce as could not interfere with any of the trades which they themselves carried on at home, the interest of the colonies was facrificed to the interest of those merchants. In allowing the fame drawbacks upon the re-exportation of the greater part of European and East India goods to the colonies, as upon their re-exportation to any independent country, the intereft of the mother country was facrificed to it, even according to the mercantile ideas of that interest. It was for the interest of the merchants to pay as little as poffible, for the foreign goods which they fent to the colonies, and, confequently, to get back as much as poffible of the duties which they advanced upon their importation into Great Britain. They might thereby be enabled to fell in the colonies, either the fame quantity of goods with a greater profit, or a greater quantity with the fame profit, and, confequently, to gain fomething either in the one way or the other. It was, likewife, for the intereft of the colonies to get all fuch goods as cheap and in as great abundance as possible. But this might not always be for the intereft of the mother country. She might frequently fuffer both in her revenue, by giving back a great part of the duties which had been paid upon the importation of fuch goods; and in her manufactures, by being underfold in the colony market, in confequence of the eafy terms upon which foreign manufactures could be carried thither by means of those drawbacks. The progress of the linen manufacture

manufacture of Great Britain, it is commonly faid, has been a good C H A P. deal retarded by the drawbacks upon the re-exportation of German linen to the American colonies.

BUT though the policy of Great Britain with regard to the trade of her colonies has been dictated by the fame mercantile fpirit as that of other nations, it has, however, upon the whole, been lefs illiberal and opprefive than that of any of them.

In every thing, except their foreign trade, the liberty of the Englifh colonifts to manage their own affairs their own way is complete. It is in every respect equal to that of their fellow-citizens at home. and is fecured in the fame manner, by an affembly of the reprefentatives of the people, who claim the fole right of imposing taxes for the fupport of the colony government. The authority of this affembly over-awes the executive power, and neither the meanest nor the most obnoxious colonist, as long as he obeys the law, has any thing to fear from the refentment, either of the governour, or of any other civil or military officer in the province. The colony affemblies, though, like the houfe of commons in England, they are not always a very equal reprefentation of the people, yet they approach more nearly to that character; and as the executive power either has not the means to corrupt them, or, on account of the fupport which it receives from the mother country, is not under the neceffity of doing fo, they are perhaps in general more influenced by the inclinations of their confti-The councils, which, in the colony legislatures, corretuents. foond to the Houfe of Lords in Great Britain, are not composed of an hereditary nobility. In fome of the colonies, as in three of the governments of New England, those councils are not appointed by the king, but chosen by the representatives of the people. In none of the English colonies is there any hereditary nobility. ~ In all of them, indeed, as in all other free countries, the descendant of an old colony family is more respected than an upftart of Bb Vol. II.

BOOK

~~

of equal merit and fortune : but he is only more respected, and he has no privileges by which he can be troublefome to his neighbours.y Before the commencement of the prefent diffurbances, the colony affemblies had not only the legislative, but a part of the executive power. In Connecticut and Rhode Island, they elected the governor. In the other colonies they appointed the revenue officers who collected the taxes imposed by those respective assemblies, to whom those officers were immediately responsible. There is more equality, therefore, among the English colonists than among the inhabitants of the mother country. Their mannets are more republican, and their governments, those of three of the provinces of New England in particular, have hitherto been more republican too.

THE absolute governments of Spain, Portugal, and France, on the contrary, take place in their colonies; and the difcretionary powers which fuch governments commonly delegate to all their inferior officers are, on account of the great diftance, naturally exercifed there with more than ordinary violence. Under all abfolute governments there is more liberty in the capital than in any other part of the country. The fovereign himself can never have either intereft or inclination to pervert the order of juffice, or to opprefs the great body of the people. In the capital his prefence overawes more or less all his inferior officers, who in the remoter provinces, from whence the complaints of the people are lefs likely to reach him, can exercife their tyranny with much more fafety. But the European colonies in America are more remote than the most distant provinces of the greatest empires which had ever been known before. The government of the English colonies is perhaps the only one which, fince the world began, could give perfect fecurity to the inhabitants of fo very diftant a province. The administration of the French colonies, however, has always been conducted with more gentlenefs and moderation than that

that of the Spanish and Portugueze. This superiority of conduct C H A P. is suitable both to the character of the French nation, and to what forms the character of every nation, the nature of their government, which though arbitrary and violent in comparison with that of Great Britain, is legal and free in comparison with those of Spain and Portugal.

It is in the progrefs of the North American colonies, however, that the fuperiority of the English policy chiefly appears. The progrefs of the fugar colonies of France has been at least equal, perhaps fuperior, to that of the greater part of those of England; and yet the fugar colonies of England enjoy a free government nearly of the fame kind with that which takes places in her colonies of North America. But the fugar colonies of France are not discouraged, like those of England, from refining their own fugar; and, what is of still greater importance, the genius of their government naturally introduces a better management of their negro flaves.

In all European colonies the culture of the fugar-cane is carried on by negro flaves. The conflitution of those who have been born in the temperate climate of Europe could not, it is fupposed, support the labour of digging the ground under the burning fun of the Weft Indies; and the culture of the fugar cane, as it is managed at prefent, is all hand labour, though, in the opinion of many, the drill plough might be introduced into it with great advantage. But, as the profit and fuccefs of the cultivation which is carried on by means of cattle, depend very much upon the good management of those cattle; fo the profit and fuccefs of that which is carried on by flaves, must depend equally upon the good management of those flaves; and in the good management of their flaves the French planters, I think it is generally allowed, are superior to the English. The law, so far as it gives fome Bb 2

воок 188

IV.

fome weak protection to the flave against the violence of his master, is likely to be better executed in a colony where the government is in a great measure arbitrary, than in one where it is altogether free. In every country where the unfortunate law of flavery is eftablished, the magistrate, when he protects the flave, intermeddles in some measure in the management of the private property of the master; and, in a free country, where the master is perhaps either a member of the colony affembly, or an elector of fuch a member, he dare not do this but with the greatest caution and circumspection. The refpect which he is obliged to pay to the mafter, renders it more difficult for him to protect the flave. But in a country where the government is in a great measure arbitrary, where it is usual for the magistrate to intermeddle even in the management of the private property of individuals, and to fend them, perhaps, a lettre de cachet if they do not manage it according to his liking, it is much easier for him to give some protection to the flave; and common humanity naturally difpofes him to do fo. The protection of the magistrate renders the flave less contemptible in the eyes of his master, who is thereby induced to confider him with more regard, and to treat him with more gentleness. Gentle usage renders the flave not only more faithful, but more intelligent, and therefore, upon a double account, more useful. He approaches more to the condition of a free fervant, and may possels fome degree of integrity and attachment to his mafter's interest, virtues which frequently belong to free fervants, but which never can belong to a flave, who is treated as flaves commonly are in countries where the mafter is perfectly free and fecure.

THAT the condition of a flave is better under an arbitrary than under a free government, is, I believe, fupported by the hiftory of all ages and nations. In the Roman hiftory, the first time we read of the magistrate interposing to protect the flave from the violence of of his mafter, is under the emperors. When Vedius Pollio, in the prefence of Augustus, ordered one of his flaves, who had committed a flight fault, to be cut into pieces and thrown into his fish pond in order to feed his fishes, the emperor commanded him, with indignation, to emancipate immediately, not only that flave, but all the others that belonged to him. Under the republick no magisfrate could have had authority enough to protect the flave, much lefs to punish the mafter.

THE flock, it is to be observed, which has improved the fugar colonies of France, particularly the great colony of St. Domingo. has been raifed almost entirely from the gradual improvement and cultivation of those colonies. It has been almost altogether the produce of the foil and of the industry of the colonists, or, what comes to the fame thing, the price of that produce gradually accumulated by good management, and employed in raifing a ftill greater produce. But the flock which has improved and cultivated the fugar colonies of England has, a great part of it, been fent out from England, and has by no means been altogether the produce of the foil and industry of the colonists. The prosperity of the English fugar colonies has been, in a great measure, owing to the great riches of England, of which a part has overflowed, if one may fay fo, upon those colonies. But the prosperity of the fugar colonies of France has been entirely owing to the good conduct of the colonists, which must therefore have had fome fuperiority over that of the English; and this superiority has been remarked in nothing fo much as in the good management of their flaves.

SUCH have been the general outlines of the policy of the different European nations with regard to their colonies.

THE policy of Europe, therefore, has very little to boaft of, either in the original establishment, or in the subsequent prosperity of the colonies of America.

FOLLY

FOLLY and injuffice feem to have been the principles which prefided over and directed the first project of establishing those colonies; the folly of hunting after gold and falver mines, and the injustice of coveting the possession of a country whose harmless natives, far from having ever injured the people of Europe, had received the first adventurers with every mark of kindness and hospitality.

THE adventurers, indeed, who formed fome of the later eftablifhments, joined, to the chimerical project of finding gold and filver mines, other motives more reafonable and more laudable; but even these motives do very little honour to the policy of Europe.

^ THE Englifh puritans, reftrained at home, fled for freedom to America, and eftablifhed there the four governments of New England. The Englifh catholicks, treated with much greater injuftice, eftablifhed that of Maryland; the Quakers, that of Penfylvania. → The Portugueze Jews, perfecuted by the inquifition, ftript of their fortunes, and banifhed to Brazil, introduced, by their example, fome fort of order and induftry among the transported felons and ftrumpets, by whom that colony was originally peopled, and taught them the culture of the fugar-cane. Upon all these different occafions it was, not the wisdom and policy, but the diforder and injuflice of the European governments, which peopled and cultivated America.

In effectuating fome of the most important of these establishments, the different governments of Europe had as little merit as in projecting them. The conquest of Mexico was the project, not of the council of Spain, but of a governor of Cuba; and it was effectuated by the spirit of the bold adventurer to whom it was entrusted,

BOOK

entrusted, in spite of every thing which that governor, who soon repented of having trusted such a person, could do to thwart it. The conquerors of Chili and Peru, and of almost all the other Spanish Settlements upon the continent of America, carried out with them no other publick encouragement, but a general permission to make fettlements and conquests in the name of the king of Spain. Those adventures were all at the private risk and expence of the adventurers. The government of Spain contributed fcarce any thing to any of them. That of England contributed as little towards effectuating the establishment of some of its most important colonies in North America.

WHEN those establishments were effectuated, and had become fo confiderable as to attract the attention of the mother country, the first regulations which she made with regard to them had always in view to fecure to herfelf the monopoly of their commerce; to confine their market, and to enlarge her own at their expence, and, confequently, rather to damp and discourage, than to quicken and forward the course of their prosperity. In the different ways in which this monopoly has been exercised, confists one of the most effential differences in the policy of the different European nations with regard to their colonies. The best of them all, that of England, is only fomewhat less illiberal and oppressive than that of any of the reft.

\* IN what way, therefore, has the policy of Europe contributed either to the first establishment, or to the present grandeur of the colonies of America? In one way, and in one way only, it has contributed a good deal. Magna virian Mater! It bred and formed the men who were capable of atchieving fuch great actions, and of laying the foundation of fo great an empire; and there is no other quarter of the world of which the policy is capable of forming.

CHAP. VII.

BOOK IV. or has ever actually and in fact formed fuch men. The colonies owe to the policy of Europe the education and great views of their active and enterprizing founders; and fome of the greatest and most important of them owe to it fcarce any thing elfe. Y

# PART THIRD.

Of the Advantages which Europe has derived from the Discovery of America, and from that of a Passage to the East Indies by the Cape of Good Hope.

SUCH are the advantages which the colonies of America have derived from the policy of Europe.

WHAT are those which Europe has derived from the discovery and colonization of America ?

THOSE advantages may be divided, firft, into the general advantages which Europe, confidered as one great country, has derived from those great events; and, fecondly, into the particular advantages which each colonizing country has derived from the colonies which particularly belong to it, in confequence of the authority or dominion which it exercises over them.

THE general advantages which Europe, confidered as one great country, has derived from the difcovery and colonization of America, confift, first, in the increase of its enjoyments; and, secondly, in the augmentation of its industry.

THE furplus produce of America, imported into Europe, furnifhes the inhabitants of this great continent with a variety of commodities which they could not otherwife have poffeffed, fome for conveniency and ufe, fome for pleafure, and fome for ornament, and thereby contributes to increafe their enjoyments.

THE difcovery and colonization of America, it will readily be allowed, have contributed to augment the induftry, firft, of all the countries which trade to it directly; fuch as Spain, Portugal, France, and England; and, fecondly, of all thofe which, without trading to it directly, fend, through the medium of other countries, goods to it of their own produce; fuch as Auftrian Flanders, and fome provinces of Germany, which, through the medium of the countries before mentioned, fend to it a confiderable quantity of linen and other goods. All fuch countries have evidently gained a more extensive market for their furplus produce, and muft confequently have been encouraged to increafe its quantity.

BUT, that those great events should likewise have contributed to encourage the industry of countries, fuch as Hungary and Poland, which may never, perhaps, have fent a fingle commodity of their own produce to America, is not, perhaps, altogether fo evident. That those events have done fo, however, cannot be doubted. Some part of the produce of America is confumed in Hungary and Poland, and there is fome demand there for the fugar, chocolate, and tobacco, of that new quarter of the world. But those commodities must be purchased with something which is either the produce of the industry of Hungary and Poland, or with fomething which had been purchased with some part of that produce. Those commodities of America are new values, new equivalents, introduced into Hungary and Poland to be exchanged there, for the furplus produce of those countries. By being carried thither they create a new and more extensive market for that furplus produce. They raife its value, and thereby contribute to encourage its increase. Though no part of it may ever be carried to America, it may be carried to other countries which purchafe it with a part of their fhare of the furplus produce of America; and it may find a market by means of the circulation of that trade which was originally put into motion by the furplus produce of America.

Cc

Vol. II.

THOSE

BOOK

THOSE great events may even have contributed to increase the enjoyments, and to augment the industry of countries which, not only never fent any commodities to America, but never received any from it. Even fuch countries may have received a greater abundance of other commodities from countries of which the furplus produce had been augmented by means of the American trade. This greater abundance, as it must necessarily have increased their enjoyments, fo it must likewife have augmented their industry. A greater number of new equivalents of fome kind or other must have been prefented to them to be exchanged for the furplus produce of that industry. A more extensive market must have been created for that furplus produce, fo as to raife its value, and thereby encourage its increase. The mass of commodities annually thrown into the great circle of European commerce, and by its various revolutions annually distributed among all the different nations comprehended within it, must have been augmented by the whole furplus produce of America. A greater share of this greater mass, therefore, is likely to have fallen to each of those nations, to have increafed their enjoyments, and augmented their industry.

THE exclusive trade of the mother countries tends to diminifh, or, at leaft, to keep down below what they would otherwife rife to, both the enjoyments and industry of all those nations in general, and of the American colonies in particular. It is a dead weight upon the action of one of the great springs which puts into motion a great part of the business of mankind. By rendering the colony produce dearer in all other countries, it leffens its confumption, and thereby cramps the industry of the colonies, and both the enjoyments and the industry of all other countries, which both enjoy lefs when they pay more for what they enjoy, and produce lefs when they get less for what they produce. By rendering the produce of all other countries dearer in the colonies, it cramps, in

in the fame manner, the induftry of all other countries, and both the enjoyments and the induftry of the colonies. It is a clog which, for the fuppofed benefit of fome particular countries, embarraffes the pleafures, and encumbers the induftry of all other countries; but of the colonies more than of any other. It only excludes, as much as poffible, all other countries from one particular market; but it confines, as much as poffible, the colonies to one particular market: and the difference is very great between being excluded from one particular market, when all others are open, and being confined to one particular market, when all others are flut up. The furplus produce of the colonies, however, is the original fource of all that increase of enjoyments and induftry which Europe derives from the discovery and colonization of America; and the exclusive trade of the mother countries tends to render this fource much lefs abundant than it otherwise would be.

THE particular advantages which each colonizing country derives from the colonies which particularly belong to it, are of two different kinds; first, those common advantages which every empire derives from the provinces subject to its dominion; and, secondly, those peculiar advantages which are supposed to result from provinces of so very peculiar a nature as the European colonies of America.

THE common advantages which every empire derives from the provinces fubject to its dominion, confift, firft, in the military force which they furnish for its defence; and, fecondly, in the revenue which they furnish for the fupport of its civil government. The Roman colonies furnished occasionally both the one and the other. The Greek colonies, fometimes, furnished a military force; but feldom any revenue. They feldom acknowledged themselves subject to the dominion of the mother city. They were generally her allies in war, but very feldom her subjects in peace.

Cc 2

THE

CHAP.

196

BOOK

THE European colonies of America have never yet furnished any military force for the defence of the mother country. Their military force has never yet been fufficient for their own defence; and in the different wars in which the mother countries have been engaged, the defence of their colonies has generally occasioned a very considerable distraction of the military force of those countries. In this respect, therefore, all the European colonies have, without exception, been a cause rather of weakness than of strength to their respective mother countries.

The colonies of Spain and Portugal only have contributed any revenue towards the defence of the mother country, or the fupport of her civil government. The taxes which have been levied upon those of other European nations, upon those of England in particular, have feldom been equal to the expence laid out upon them in time of peace, and never fufficient to defray that which they occasioned in time of war. Such colonies, therefore, have been a fource of expence and not of revenue to their respective mother countries.

THE advantages of fuch colonies to their refpective mother countries, confift altogether in those peculiar advantages which are supposed to refult from provinces of sovery peculiar a nature as the European colonies of America; and the exclusive trade, it is acknowledged, is the sole source of all those peculiar advantages.

In confequence of this exclusive trade, all that part of the furplus produce of the English colonies, for example, which confists in what are called enumerated commodities, can be fent to no other country but England. Other countries must afterwards buy it of her. It must be cheaper therefore in England than it can be in any other country, and must contribute more to increase

increase the enjoyments of England, than those of any other CHAP. country. It must likewife contribute more to encourage her induftry. For all those parts of her own furplus produce which England exchanges for those enumerated commodities the must get a better price than any other countries can get for the like parts of theirs, when they exchange them for the fame commodities. The manufactures of England, for example, will purchase a greater quantity of the fugar and tobacco of her own colonies, than the: like manufactures of other countries can purchase of that sugar and tobacco. So far, therefore, as the manufactures of England and those of other countries are both to be exchanged for the fugar and tobacco of the English colonies, this superiority of price gives an encouragement to the former, beyond what the latter can in thefecircumflances enjoy. The exclusive trade of the colonies, therefore, as it diminishes, or, at least, keeps down below what they would otherwife rife to; both the enjoyments and the industry of the countries which do not posses it; fo it gives an evident advantage to the countries which do possels it over those other countries.

THIS advantage; however, will, perhaps, be found to be rather what may be called a relative than an abfolute advantage; and to give a fuperiority to the country which enjoys it, rather by depreffing the industry and produce of other countries, than by raifing those of that particular country above what they would naturally rife to in the cafe of a free trade.

THE tobacco of Maryland and Virginia, for example, by meansof the monopoly which England enjoys of it, certainly comes. cheaper to England than it can do to France, to whom England commonly fells a confiderable part of it. But had France, and all other European countries been, at all times, allowed a free trade tor VII.

BOOK

to Maryland and Virginia, the tobacco of those colonies might, by this time, have come cheaper than it actually does, not only to all those other countries, but likewise to England. The produce of tobacco, in confequence of a market fo much more extensive than any which it has hitherto enjoyed, might, and probably would, by this time, have been fo much increased as to reduce the profits of a tobacco plantation to their natural level with those of a corn plantation, which, it is fuppofed, they are still fomewhat above. The price of tobacco might, and probably would, by this time, have fallen fomewhat lower than it is at prefent. An equal quantity of the commodities either of England, or of those other countries, might have purchased in Maryland and Virginia a greater quantity of tobacco than it can do at prefent, and, confequently, have been fold there for fo much a better price. So far as that weed, therefore, can, by its cheapnefs and abundance, increase the enjoyments or augment the industry either of England or of any other country, it would, probably, in the cafe of a free trade, have produced both these effects in somewhat a greater degree than it can do at present. England, indeed, would not in this cafe have had any advantage over other countries. She might have bought the tobacco of her colonies fomewhat cheaper, and, confequently, have fold fome of her own commodities fomewhat dearer than fhe actually does. But fhe could neither have bought the one cheaper nor fold the other dearer than any other country might have done. She might, perhaps, have gained an abfolute, but fhe would certainly have loft a relative advantage.

In order, however, to obtain this relative advantage in the colony trade, in order to execute the invidious and malignant project of excluding as much as possible other nations from any share in it, England, there are very probable reasons for believing, has not only factificed a part of the absolute advantage which she, as well as every

every other nation, might have derived from that trade, but has C H A P. fubjected herfelf both to an abfolute and to a relative difadvantage in almost every other branch of trade.

WHEN, by the act of navigation, England affumed to herfelf the monopoly of the colony trade, the foreign capitals which had. before been employed in it were neceffarily withdrawn from it. The English capital, which had before carried on but a part of it, was now to carry on the whole. The capital which had before fupplied the colonies with but a part of the goods which they wanted from Europe, was now all that was employed to fupply them with the whole. But it could not fupply them with the whole, and the goods with which it did fupply them were neceffarily fold very dear. The capital which had before bought but a part of the furplusproduce of the colonies, was now all that was employed to buy the whole. But it could not buy the whole at any thing near the old price, and, therefore, whatever it did buy it neceffarily bought very cheap. But in an employment of capital in which the merchant fold very dear and bought very cheap, the profit must have been very great, and much above the ordinary level of profit in other branches of trade. This superiority of profit in the colony trade could not fail to draw from other branches of trade a part of the capital which had before been employed in them. But this revulfion: of capital, as it must have gradually increased the competition of capitals in the colony trade, fo it must have gradually diminished that competition in all those other branches of trade; as it must have gradually lowered the profits of the one, fo it must have gradually raifed those of the other, till the profits of all came to a new level, different from and fomewhat higher than that at which they had been before.

THIS double effect, of drawing capital from all other trades, and of raifing the rate of profit fomewhat higher than it otherwife would. have

BOOK IV. have been in all trades, was not only produced by this monopoly upon its first establishment, but has continued to be produced by it ever fince.

> FIRST, this monopoly has been continually drawing capital from all other trades to be employed in that of the colonies.

THOUGH the wealth of Great Britain has increased very much fince the establishment of the act of navigation, it certainly has not increafed in the fame proportion as that of the colonies. But the foreign trade of every country naturally increases in proportion to its wealth, its furplus produce in proportion to its whole produce; and Great Britain having engroffed to herfelf almost the whole of what may be called the foreign trade of the colonies, and her capital not having increased in the same proportion as the extent of that trade, fhe could not carry it on without continually withdrawing from other branches of trade fome part of the capital which had before been employed in them, as well as with-holding from them a great deal more which would otherwife have gone to them. Since the eftablishment of the act of navigation, accordingly, the colony trade has been continually increasing, while many other branches of foreign trade, particularly of that to other parts of Europe, have been continually decaying. Our manufactures for foreign fale, inftead of being fuited, as before the act of navigation, to the neighbouring market of Europe, or to the more diftant one of the countries which lie round the Mediterranean fea, have, the greater part of them, been accommodated to the ftill more diffant one of the colonies, to the market in which they have the monopoly, rather than to that in which they have many competitors. The caufes of decay in other branches of foreign trade, which, by Sir Matthew Decker and other writers, have been fought for in the excefs and improper mode of taxation, in the high price of labour, in the increafe 4

increafe of luxury, &c. may all be found in the over-growth of C H A P. the colony trade. The mercantile capital of Great Britain, though very great, yet not being infinite; and though greatly increafed fince the act of navigation, yet not being increafed in the fame proportion as the colony trade, that trade could not poffibly be carried on without withdrawing fome part of that capital from other branches of trade, nor confequently without fome decay of those other branches.

ENGLAND, it must be observed, was a great trading country, her mercantile capital was very great and likely to become ftill greater and greater every day, not only before the act of navigation had established the monopoly of the colony trade, but before that trade was very confiderable. In the Dutch war, during the government of Cromwel, her navy was superior to that of Holland; and in that which broke out in the beginning of the reign of Charles II. it was at least equal, perhaps superior, to the united navies of France and Holland. Its fuperiority, perhaps, would fcarce appear greater in the prefent times; at least if the Dutch navy was to bear the fame proportion to the Dutch commerce now which it did then. But this great naval power could not, in either of those wars, be owing to the act of navigation. During the first of them the plan of that act had been but just formed; and though before the breaking out of the fecond it had been fully enacted by legal authority; yet no part of it could have had time to produce any confiderable effect, and leaft of all that part which established the exclusive trade to the colonies. Both the colonies and their trade were inconfiderable then in comparifon of what they are now. The island of Jamaica was an unwholesome defert, little inhabited, and less cultivated. New York and New Jerfey were in the poffettion of the Dutch: the half of St. Christopher's in that of the French. The island of VOL. II. D d Antigua,

Antigua, the two Carolinas, Penfylvania, Georgia, and Nova Scotia, were not planted. Virginia, Maryland, and New England were planted; and though they were very thriving colonies, yet there was not, perhaps, at that time either in Europe or America a fingle perfon who forefaw or even fuspected the rapid progrefs which they have fince made in wealth, population and improvement. The island of Barbadoes, in short, was the only British colony of any confequence of which the condition at that time bore any refemblance to what it is at prefent. The trade of the colonies, of which England, even for fome time after the act of navigation, enjoyed but a part (for the act of navigation was not very firicity executed till feveral years after it was enacted), could not at that time be the caufe of the great trade of England, nor of the great naval power which was supported by that trade. The trade which at that time supported that great naval power was the trade of Europe, and of the countries which lie round the Mediterranean fea. But the fhare which Great Britain at prefent enjoys of that trade could not fupport any fuch great naval power. Had the growing trade of the colonies been left free to. all nations, whatever share of it might have fallen to Great Britain, and a very confiderable fhare would probably have fallen to her, must have been all an addition to this great trade of which the was before in pofferfion. In confequence of the monopoly, theincrease of the colony trade has not fo much occasioned an addition. to the trade which Great Britain had before, as a total change in. its direction.

SECONDLY, this monopoly has neceffarily contributed to keep up the rate of profit in all the different branches of British trade higher than it naturally would have been, had all nations been allowed a free trade to the British colonies.

THE

202

BOOK

THE monopoly of the colony trade, as it neceffarily drew towards CHAP. that trade a greater proportion of the capital of Great Britain than what would have gone to it of its own accord; fo by the expulsion of all foreign capitals it neceffarily reduced the whole quantity of capital employed in that trade below what it naturally would have been in the cafe of a free trade. But, by leffening the competition of capitals in that branch of trade, it neceffarily raifed the rate of profit in that branch. By leffening too the competition of Britifh capitals in all other branches of trade, it neceffarily raifed the rate of British profit in all those other branches. Whatever may ' have been, at any particular period, fince the eftablishment of the act of navigation, the flate or extent of the mercantile capital of Great Britain, the monopoly of the colony trade muft, during the continuance of that state, have raifed the ordinary rate of British profit higher than it otherwife would have been both in that and in all the other branches of British trade. If, fince the establishment of the act of navigation, the ordinary rate of British profit has fallen confiderably, as it certainly has, it must have fallen still lower, had not the monopoly established by that act contributed to keep it up.

BUT whatever raifes in any country the ordinary rate of profit higher than it otherwife would be, neceffarily fubjects that country both to an abfolute and to a relative difadvantage in every branch of trade of which fhe has not the monopoly.

IT fubjects her to an abfolute difadvantage: becaufe in fuch branches of trade her merchants cannot get this greater profit, without felling dearer than they otherwife would do both the goods of foreign countries which they import into their own, and the goods of their own country which they export to foreign countries. Their own country must both buy dearer and fell dearer; must both buy lefs and fell lefs; must both enjoy lefs and produce lefs than the otherwife would do.

IT

204

BOOK

IT fubjects her to a relative difadvantage; becaufe in fuch branches of trade it fets other countries which are not fubject to the fame abfolute difadvantage either more above her or lefs below her than they otherwife would be. It enables them both to enjoy more and to produce more in proportion to what fhe enjoys and produces. It renders their fuperiority greater or their inferiority lefs than it otherwife would be. By raifing the price of her produce above what it otherwife would be, it enables the merchants of other countries to underfell her in foreign markets, and thereby to juftle her out of almost all those branches of trade, of which she has not the monopoly.

OUR merchants frequently complain of the high wages of Britifh labour as the caufe of their manufactures being underfold in foreign markets; but they are filent about the high profits of flock. They complain of the extravagant gain of other people; but they fay nothing of their own. The high profits of Britifh flock, however, may contribute towards raifing the price of Britifh manufactures in many cafes as much, and in fome perhaps more, than the high wages of Britifh labour.

It is in this manner that the capital of Great Britain, one may juftly fay, has partly been drawn and partly been driven from the greater part of the different branches of trade of which fhe has not the monopoly; from the trade of Europe in particular, and from that of the countries which lie round the Mediterranean fea.

IT has partly been drawn from those branches of trade; by the attraction of fuperior profit in the colony trade in confequence of the continual increase of that trade, and of the continual infufficiency of the capital which had carried it on one year to carry it on the next.

IT

IT has partly been driven from them; by the advantage which C H A P. the high rate of profit, eftablished in Great Britain, gives to other countries, in all the different branches of trade of which Great Britain has not the monopoly.

As the monopoly of the colony trade has drawn from those other branches a part of the British capital which would otherwife have been employed in them, fo it has forced into them many foreign capitals which would never have gone to them, had they not been expelled from the colony trade. In those other branches of trade it has diminished the competition of British capitals, and thereby raifed the rate of British profit higher than it otherwise would have been. On the contrary, it has increased the competition of foreign capitals, and thereby funk the rate of foreign profit lower than it otherwise would have been. Both in the one way and in the other it must evidently have fubjected Great Britain to a relative difadvantage in all those other branches of trade.

THE colony trade, however, it may perhaps be faid, is more advantageous to Great Britain than any other; and the monopoly, by forcing into that trade a greater proportion of the capital of Great Britain than what would otherwife have gone to it, has turned that capital into an employment more advantageous to the country than any other which it could have found.

THE most advantageous employment of any capital to the country to which it belongs, is that which maintains there the greatest quantity of productive labour, and increases the most the annual produce of the land and labour of that country. But the quantity of productive labour which any capital employed in the foreign trade of confumption can maintain, is exactly in proportion, it has been shewn in the fecond book, to the frequency of its returns. A capital of a thousand pounds,

BOOK 1V.

pounds, for example, employed in a foreign trade of confumption, of which the returns are made regularly once in the year, can keep in conftant employment, in the country to which it belongs, a quantity of productive labour equal to what a thoufand pounds can maintain there for a year. If the returns are made twice or thrice in the year, it can keep in conftant employment a quantity of productive labour equal to what two or three thousand pounds can maintain there for a year. A foreign trade of confumption carried on with a neighbouring, is, upon this account, in general, more advantageous than one carried on with a diffant country; and for the fame reafon a direct foreign trade of confumption, as it has likewife been shewn in the fecond book, is in general more advantageous than a roundabout one.

> But the monopoly of the colony trade, fo far as it has operated upon the employment of the capital of Great Britain, has in all cafes forced fome part of it from a foreign trade of confumption carried on with a neighbouring, to one carried on with a more diftant country, and in many cafes from a direct foreign trade of confumption to a round-about one.

> FIRST, the monopoly of the colony trade has in all cafes forced fome part of the capital of Great Britain from a foreign trade of confumption carried on with a neighbouring, to one carried on with a more diftant country.

> IT has, in all cafes, forced fome part of that capital from the trade with Europe, and with the countries which lie round the Mediterranean fea, to that with the more diftant regions of America and the Weft Indies, from which the returns are neceffarily less frequent, not only on account of the greater distance, but on account

account of the peculiar circumstances of those countries. New CHAP. colonies, it has already been observed, are always understocked. Their capital is always much lefs than what they could employ with great profit and advantage in the improvement and cultivation of their land. They have a constant demand, therefore, for more capital than they have of their own; and, in order to fupply the deficiency of their own, they endeavour to borrow as much as they can of the mother country, to whom they are, therefore, always in debt. The most common way in which the colonists contract this debt, is not by borrowing upon bond of the rich people of the mother country, though they fometimes do this too, but by running as much in arrear to their correspondents, who fupply them with goods from Europe, as those correspondents will allow them. Their annual returns frequently do not amount to more than a third, and fometimes not to fo great a proportion of what they owe. The whole capital, therefore, which their correspondents advance to them is feldom returned to Britain in lefs than three, and fometimes not in less than four or five years. But a British capital of a thousand pounds, for example, which is returned to Great Britain only once in five years, can keep in constant employment only one-fifth part of the British industry which it could maintain if the whole was returned once in the year; and, instead of the quantity of industry which a thousand pounds could maintain for a year, can keep in conftant employment the quantity only which two hundred pounds can maintain for a year. The planter, no doubt, by the high price which he pays for the goods from Europe, by the interest upon the bills which he grants at distant dates, and by the commission upon the renewal of those which he grants. at near dates, makes up, and probably more than makes up, all the lofs which his correspondent can fustain by this delay. But, though he may make up the loss of his correspondent, he cannot make up that of Great Britain. In a trade of which the returns. 2

воок

are very diffant, the profit of the merchant may be as great or greater than in one in which they are very frequent and near; but the advantage of the country in which he refides, the quantity of productive labour conftantly maintained there, the annual produce of the land and labour must always be much lefs. That the returns of the trade to America, and still more those of that to the West Indies, are, in general, not only more distant, but more irregular, and more uncertain too, than those of the trade to any part of Europe, or even of the countries which lie round the Mediterranean fea, will readily be allowed, I imagine, by every body who has any experience of those different branches of trade.

SECONDLY, the monopoly of the colony trade has, in many cafes, forced fome part of the capital of Great Britain from a direct foreign trade of confumption, into a round-about one.

AMONG the enumerated commodities which, can be fent to no other market but Great Britain, there are feveral of which the quantity exceeds very much the confumption of Great Britain, and of which a part, therefore, must be exported to other countries. But this cannot be done without forcing fome part of the capital of Great Britain into a round-about foreign trade of confumption. Maryland and Virginia, for example, fend annually to Great Britain upwards of ninety-fix thoufand hogfheads of tobacco, and the confumption of Great Britain is faid not to exceed fourteen thoufand. Upwards of eighty-two thoufand hogfheads, therefore, muft be exported to other countries, to France, to Holland, and to the countries which lie round the Baltick and Mediterranean feas. But, that part of the capital of Great Britain which brings those eighty-two thousand hogsheads to Great Britain, which re-exports them from thence to those other countries, and which brings back from those other countries to Great Britain either goods or money in

in return, is employed in a round-about foreign trade of confump- C H A P. tion; and is neceffarily forced into this employment in order to dispose of this great furplus. If we would compute in how many years the whole of this capital is likely to come back to Great Britain, we must add to the distance of the American returns that of the returns from those other countries. If, in the direct foreign trade of confumption which we carry on with America, the whole capital employed frequently does not come back in lefs than three or four years; the whole capital employed in this round-about one is not likely to come back in lefs than four or five. If the one can keep in conftant employment but a third or a fourth part of the domeftick industry which could be maintained by a capital returned once in the year, the other can keep in conftant employment but a fourth or a fifth part of that industry. At some of the out-ports a credit is commonly given to those foreign correspondents to whom they export their tobacco. At the port of London, indeed, it is commonly fold for ready money. The rule is, Weigh and pay. At the port of London, therefore, the final returns of the whole roundabout trade are more diftant than the returns from America by the time only which the goods may lie unfold in the warehoufe; where, however, they may fometimes lie long enough. But, had not the colonies been confined to the market of Great Britain for the fale of their tobacco, very little more of it would probably have come to us than what was neceffary for the home confumption. The goods which Great Britain purchases at present for her own confumption with the great furplus of tobacco which fhe exports to other countries, fhe would, in this cafe, probably have purchased with the immediate produce of her own industry, or with fome part of her own manufactures. That produce, those manufactures, instead of being almost entirely fuited to one great market, as at prefent, would probably have been fitted to a great number of fmaller markets. Instead of one great round-about foreign trade of confump-VOL. II. Ee tion,

#### NATURE AND CAUSES OF THE

210

BOOK

tion, Great Britain would probably have carried on a great number of finall direct foreign trades of the fame kind. On account of the frequency of the returns, a part, and, probably, but a fmall part; perhaps not above a third or a fourth, of the capital which at prefent carries on this great round-about trade, might have been fufficient to carry on all those fmall direct ones, might have kept in constant employment an equal quantity of British industry, and have equally fupported the annual produce of the land and labour of Great Britain. All the purposes of this trade being, in this manuer, answered by a much fmaller capital, there would have been a large fpare capital to apply to other purpofes; to improve the lands, to increase the manufactures, and to extend the commerce of Great Britain; to come into competition at least with the other British capitals employed in all those different ways, to reduce the rate of profit in them all, and thereby to give to Great Britain, in all of them, a fuperiority over other countries still greater than what she at prefent enjoys.

THE monopoly of the colony trade too has forced fome part of the capital of Great Britain from all foreign trade of confumption to a carrying trade; and, confequently, from fupporting more or lefs the industry of Great Britain, to be employed altogether in supporting partly that of the colonies, and partly that of fome other countries.

THE goods, for example, which are annually purchased with the great furplus of eighty-two thousand hogsheads of tobacco annually re-exported from Great Britain, are not all confumed in Great Part of them, linen from Germany and Holland, for Britain. example, is returned to the colonies for their particular confumption. But, that part of the capital of Great Britain which buys the tobacco with which this linen is afterwards bought, is neceffarily withdrawn from fupporting the industry of Great Britain, to be employed altogether in fupporting, partly that of the colonies.

nies, and partly that of the particular countries who pay for this C H A P. tobacco with the produce of their own industry.

THE monopoly of the colony trade befides, by forcing towards it a much greater proportion of the capital of Great Britain than what would naturally have gone to it, feems to have broken altogether that natural balance which would otherwife have taken place among all the different branches of British industry. The industry of Great Britain, instead of being accommodated to a great number of fmall markets, has been principally fuited to one great market. Her commerce, instead of running in a great number of fmall channels, has been taught to run principally in one great channel. But the whole fystem of her industry and commerce has thereby been rendered lefs fecure; the whole flate of her body politick less healthful than it otherwise would have been. In her present condition, Great Britain resembles one of those unwholfome bodies in which fome of the vital parts are overgrown, and which, upon that account, are liable to many dangerous diforders fearce incident to those in which all the parts are more properly proportioned. A fmall ftop in that great blood veffel, which has been artificially fwelled beyond its natural dimensions, and through which an unnatural proportion of the industry and commerce of the country has been forced to circulate, is very likely to bring on the most dangerous diforders upon the whole body politick. The expectation of a rupture with the colonies, accordingly, has flruck the people of Great Britain with more terror than they ever felt for a Spanish armada or a French invasion. It was this terror, whether well or ill grounded, which rendered the repeal of the ftamp act, among the merchants at leaft, a popular measure. In the total exclusion from the colony market, was it to last only for a few years, the greater part of our merchants used to fancy that they forefaw an entire ftop to their trade; the greater part of our mafter

Ee 2

manu-

BOOK IV.

manufacturers, the entire ruin of their bufinefs; and the greater part of our workmen an end of their employment. A rupture with any of our neighbours upon the continent, though likely too to occasion some stop or interruption in the employments of some of all these different orders of people, is foreseen, however, without any fuch general emotion. The blood, of which the circulation is ftopt in fome of the fmaller veffels, eafily difgorges itfelf into the greater, without occafioning any dangerous diforder; but, when it is ftopt in any of the greater veffels, convultions, apoplexy, or death, are the immediate and unavoidable confequences. If but one of those overgrown manufactures, which by means either of bounties, or of the monopoly of the home and colony markets, have been artificially raifed up to an unnatural height, finds fome fmall flop or interruption in its employment, it frequently occafions a mutiny and diforder alarming to government, and embarraffing even to the deliberations of the legislature. How great, therefore, would be the diforder and confusion, it was thought, which muft neceffarily be occasioned by a fudden and entire ftop in the employment of fo great a proportion of our principal manufacturers?

Some moderate and gradual relaxation of the laws which give to Great Britain the exclusive trade to the colonies, till it is rendered in a great measure free, feems to be the only expedient which can, in all future times, deliver her from this danger, which can enable her or even force her to withdraw fome part of her capital from this overgrown employment, and to turn it, though with lefs profit, towards other employments; and which, by gradually diminishing one branch of her industry and gradually increasing all the reft, can by degrees reftore all the different branches of it to that natural, healthful, and proper proportion which perfect liberty neceffarily establishes, and which perfect liberty can alone preferve. To open the colony trade all at once to all nations, might not only occasion fome transitory incon-

inconveniency, but a great permanent loss to the greater part of CHAP. those whose industry or capital is at present engaged in it. The L fudden lofs of the employment even of the fhips which import the eighty-two thousand hogsheads of tobacco, which are over and above the confumption of Great Britain, might alone be felt very fenfibly. Such are the unfortunate effects of all the regulations of the mercantile fystem ! They not only introduce very dangerous diforders into the flate of the body politick, but diforders which it is often difficult to remedy, without occasioning for a time, at least, still greater diforders. In what manner, therefore, the colony trade ought gradually to be opened; what are the reftraints which ought first, and what are those which ought last to be taken away; or in what manner the natural fyftem of perfect liberty and juffice ought gradually to be reftored, we must leave to the wildom of future flatefmen and legiflators to determine.

FIVE different events, unforeseen and unthought of, have very fortunately concurred to hinder Great Britain from feeling, fo fenfibly as it was generally expected fhe would, the total exclusion which has now taken place for more than a year (from the first of December, 1774) from a very important branch of the colony trade, that of the twelve affociated provinces of North America. First, those colonies in preparing themselves for their non-importation agreement, drained Great Britain completely of all the commodities which were fit for their market : fecondly, the extraordinary demand of the Spanish Flota has, this year, drained Germany and the North of many commodities, linen in particular, which ufed to come into competition, even in the British market, with the manufactures of Great Britain : thirdly, the peace between Ruffia and Turkey has occafioned an extraordinary demand from the Turkey market, which, during the diftress of the country, and while a Ruffian fleet was cruizing in the Archipelago, had been very

воок

IV.

very poorly fupplied: fourthly, the demand of the north of Europe for the manufactures of Great Britain, has been increasing from year to year for fome time passes and, fifthly, the late partition and confequential pacification of Poland, by opening the market of that great country, have this year added an extraordinary demand from thence to the increasing demand of the North. These events are all, except the fourth, in their nature transitory and accidental, and the exclusion from fo important a branch of the colony trade, if unfortunately it solutions of the distress however, as it will come on gradually, will be felt much less feverely than if it had come on all at once; and, in the mean time, the industry and capital of the country may find a new employment and direction, fo as to prevent this diffress from ever rising to any confiderable height.

THE monopoly of the colony trade, therefore, fo far as it has turned towards that trade a greater proportion of the capital of Great Britain than what would otherwife have gone to it, has in all cafes turned it, from a foreign trade of confumption with a neighbouring, into one with a more diftant country; in many cafes, from a direct foreign trade of confumption, into a round-about one; and in fome cafes, from all foreign trade of confumption, into a carrying trade. It has in all cafes, therefore, turned it, from a direction in which it would have maintained a greater quantity of productive labour, into one, in which it can maintain a much fmaller quantity. By fuiting, befides, to one particular market only, fo great a part of the induftry and commerce of Great Britain, it has rendered the whole flate of that induftry and commerce more precarious and lefs fecure, than if their produce had been accommodated to a greater variety of markets.

WE must carefully diffinguish between the effects of the colony trade and those of the monopoly of that trade. The former are always and

and neceffarily beneficial; the latter always and neceffarily hurtful. CHAP. But the former are fo beneficial, that the colony trade, though fubject to a monopoly, and notwithstanding the hurtful effects of that monopoly, is still upon the whole beneficial, and greatly beneficial; though a good deal lefs fo than it otherwife would be.

THE effect of the colony trade in its natural and free flate, is to open a great, though diftant market for fuch parts of the produce of British industry as may exceed the demand of the markets nearer home, of those of Europe and of the countries which lie round the Mediterranean fea. In its natural and free flate, the colony trade, without drawing from those markets any part of the produce which had ever been fent to them, encourages Great Britain to increase the furplus continually, by continually prefenting new equivalents to be exchanged for it. In its natural and free ftate, the colony trade tends to increase the quantity of productive labour in Great Britain, but without altering in any respect the direction of that which had been employed there before. In the natural and free flate of the colony trade, the competition of all other nations would hinder the rate of profit from rifing above the common level either in the new market, or in the new employment. The new market, without drawing any thing from the old one, would create, if one may fay fo, a new produce for its own fupply; and that new produce would conflitute a new capital for carrying on the new employment which in the fame manner would draw nothing from the old one.

THE monopoly of the colony trade, on the contrary, by excluding the competition of other nations, and thereby raifing the rate of profit both in the new market and in the new employment, draws produce from the old market and capital from the old employment. To augment our fhare of the colony trade beyond what it otherwife would be, is the avowed purpose of the monopoly. If our fhare

VII.

216

BOOK fhare of that trade were to be no greater with, than it would have been without the monopoly, there could have been no reafon for establishing the monopoly. But whatever forces into a branch of trade of which the returns are flower and more diffant than those of the greater part of other trades, a greater proportion of the capital of any country, than what of its own accord would go to that branch, neceffarily renders the whole quantity of productive labour annually maintained there, the whole annual produce of the land and labour of that country, lefs than they otherwife would be. It keeps down the revenue of the inhabitants of that country, below what it would naturally rife to, and thereby diminifhes their power It not only hinders, at all times, their capital of accumulation. from maintaining fo great a quantity of productive labour as it would otherwife maintain, but it hinders it from increasing fo fast as it would otherwife increase, and confequently from maintaining a still greater quantity of productive labour.

> THE natural good effects of the colony trade, however, more than counterbalance to Great Britain the bad effects of the monopoly, fo that, monopoly and all together, that trade, even as it is carried on at prefent, is not only advantageous, but greatly advantageous. The new market and new employment which are opened by the colony trade, are of much greater extent than that portion of the old market and of the old employment which is loft by the monopoly. The new produce and the new capital which has been created, if one may fay fo, by the colony trade, maintain in Great Britain a greater quantity of productive labour, than what can have been thrown out of employment by the revultion of capital from other trades of which the returns are more frequent. If the colony trade, however, even as it is carried on at prefent is advantageous to Great Britain, it is not by means of the monopoly, but in fpite of the monopoly.

> > +

IT

IT is rather for the manufactured than for the rude produce of CHAP. Europe, that the colony trade opens a new market. Agriculture is the proper bufiness of all new colonies; a bufiness which the cheapnels of land renders more advantageous than any other. They abound, therefore, in the rude produce of land, and instead of importing it from other countries, they have generally a large furplus to export. In new colonies, agriculture either draws hands from all other employments, or keeps them from going to any other employment. There are few hands to spare for the necessary, and none for the ornamental manufactures. The greater part of the manufactures of both kinds, they find it cheaper to purchase of other countries than to make for themfelves. It is chiefly by encouraging the manufactures of Europe, that the colony trade indirectly encourages its agriculture. The manufacturers of Europe, to whom that trade gives employment conftitute a new market for the produce of the land; and the most advantageous of all markets; the home market for the corn and cattle, for the bread and butchers-meat of Europe; is thus greatly extended by means of the trade to America.

BUT that the monopoly of the trade of populous and thriving colonies is not alone fufficient to establish, or even to maintain manufactures in any country, the examples of Spain and Portugal fufficiently demonstrate. Spain and Portugal were manufacturing countries before they had any confiderable colonies. Since they had the richeft and most fertile in the world they have both ceased to be fo.

IN Spain and Portugal, the bad effects of the monopoly, aggravated by other caufes, have, perhaps, nearly overbalanced the natural good effects of the colony trade. These causes feem to be, other monopolies of different kinds; the degradation of the value of gold and filver below what it is in most other countries; the exclusion from foreign markets by improper taxes upon exportation, and the VOL. II. Ff narrowing

217

VII.

narrowing of the home market, by fiill more improper taxes upon the transportation of goods from one part of the country to another; but above all, that irregular and partial administration of justice, which often protects the rich and powerful debtor from the pursuit of his injured creditor, and which makes the industrious part of the nation afraid to prepare goods for the confumption of those haughty and great men, to whom they dare not refuse to fell upon credit, and from whom they are altogether uncertain of re-payment.

IN England, on the contrary, the natural good effects of the colony trade, affisted by other causes, have in a great measure conquered the bad effects of the monopoly. These causes seem to be, the general liberty of trade, which, notwithstanding fome restraints, is at least equal, perhaps fuperior, to what it is in any other country; the liberty of exporting, duty free, almost all forts of goods which are the produce of domeflick industry, to almost any foreign country; and what, perhaps, is of still greater importance, the unbounded liberty of transporting them from any one part of our own country to any other, without being obliged to give any account to any publick office, without being liable to queftion or examinationof any kind; but above all, that equal and impartial administration of justice which renders the rights of the meanest British subject respectable to the greatest, and which, by fecuring to every man the fruits of his own industry, gives the greatest and most effectual encouragement to every fort of industry.

IF the manufactures of Great Britain, however, have been advanced, as they certainly have, by the colony trade, it has not been by means of the monopoly of that trade, but in fpite of the monopoly. The effect of the monopoly has been, not to augment the quantity, but to alter the quality and fhape of a part of the manufactures of Great Britain, and to accommodate to a market,

218

BOOK

market, from which the returns are flow and diftant, what would C H A P. otherwife have been accommodated to one from which the returns are frequent and near. Its effect has confequently been to turn a part of the capital of Great Britain from an employment in which it would have maintained a greater quantity of manufacturing induftry, to one in which it maintains a much fmaller, and thereby to diminifh, inflead of increafing, the whole quantity of manufacturing induftry maintained in Great Britain.

THE monopoly of the colony trade, therefore, like all the other mean and malignant expedients of the mercantile fystem, depresses the industry of all other countries, but chiefly that of the colonies, without in the least increasing, but on the contrary diminishing, that of the country in whose favour it is established.

THE monopoly hinders the capital of that country, whatever may at any particular time be the extent of that capital, from maintaining fo great a quantity of productive labour as it would otherwife maintain, and from affording fo great a revenue to the industrious inhabitants as it would otherwife afford. But as capital can be increased only by favings from revenue, the monopoly, by hindering it from affording fo great a revenue as it would otherwife afford, neceffarily hinders it from increasing fo fast as it would otherwife increase, and consequently from maintaining a ftill greater quantity of productive labour, and affording a ftill greater revenue to the industrious inhabitants of that country. One great original fource of revenue, therefore, the wages of labour, the monopoly must neceffarily have rendered at all times less abundant than it otherwise would have been.

Ff2

By

220

BOOK IV.

By raifing the rate of mercantile profit, the monopoly difcourages the improvement of land. The profit of improvement depends upon the difference between what the land actually produces, and what, by the application of a certain capital, it can be made to produce. If this difference affords a greater profit than what can be drawn from an equal capital in any mercantile employment, the improvement of land will draw capital from all mercantile employments. If the profit is lefs, mercantile employments will draw capital from the improvement of land. Whatever therefore raifes the rate of mercantile profit, either lessent the fuperiority or increases the inferiority of the profit of improvement; and in the one cafe hinders capital from going to improvement, and in the other draws capital from it. But by difcouraging improvement, the monopoly neceffarily retards the natural increase of another great original fource of revenue, the rent of land. By raifing the rate of profit too the monopoly neceffarily keeps up the market rate of intereft higher than it otherwife would be. But the price of land in proportion to the rent which it affords, the number of years purchafe which is commonly paid for it, neceffarily falls as the rate of interest rifes, and rifes as the rate of interest falls. The monopoly, therefore, hurts the interest of the landlord two different ways, by retarding the natural increase, first, of his rent, and secondly, of the price which he would get for his land in proportion to the rent which it affords.

THE monopoly indeed, raifes the rate of mercantile profit, and thereby augments fomewhat the gain of our merchants. But as it obftructs the natural increase of capital, it tends rather to diminish than to increase the fum total of the revenue which the inhabitants of the country derive from the profits of stock; a finall profit upon a great capital generally affording a greater revenue than a great profit upon a small one. The monopoly 2 raises the rate of profit, but it hinders the sum of profit from rising C H A P. fo high as it otherwise would do.

ALL the original fources of revenue, the wages of labour, the rent of land, and the profits of ftock, the monopoly renders much lefs abundant than they otherwife would be. To promote the little interest of one little order of men in one country, it hurts the interest of all other orders of men in that country, and of all men in all other countries.

IT is folely by raifing the ordinary rate of profit that the monopoly either has proved or could prove advantageous to any one particular order of men. But befides all the bad effects to the country in general which have already been mentioned as neceffarily refulting from a high rate of profit; there is one more fatal, perhaps, than all these put together, but which, if we may judge from experience, is infeparably connected with it. The high rate of profit feems every where to deftroy that parfimony which in other circumftances is natural to the character of the merchant. When profits are high, that fober virtue feems to be fuperfluous, and expenfive luxury to fuit better the affluence of his fituation. But the owners of the great mercantile capitals are neceffarily the leaders and conductors of the whole industry of every nation, and their example has a much greater influence upon the manners of the whole industrious part of it than that of any other order of men. If his employer is attentive and parfimonious, the workman is very likely to be fo too; but if the mafter is diffolute and diforderly, the fervant who fhapes his work according to the pattern which hismaster prescribes to him, will shape his life too according to the: example which he fets him. Accumulation is thus prevented in the hands of all those who are naturally the most disposed to accumulate; and the funds deftined for the maintenance of productive laboun

222

BOOK bour receive no augmentation from the revenue of those who ought naturally to augment them the most. The capital of the country, inficad of increasing, gradually dwindles away, and the quantity of productive labour maintained in it grows every day lefs and lefs. Have the exorbitant profits of the merchants of Cadiz and Lifbon augmented the capital of Spain and Portugal? Have they alleviated the poverty, have they promoted the industry of those two beggarly countries? Such has been the tone of mercantile expence in those two trading cities, that those exorbitant profits, far from augmenting the general capital of the country, feem fcarce to have been fufficient to keep up the capitals upon which they were made. Foreign capitals are every day intruding themfelves, if I may fay fo, more and more into the trade of Cadiz and Lifbon. It is to expel those foreign capitals from a trade which their own grows every day more and more infufficient for carrying on, that the Spaniards and Portugueze endeavour every day to ftraiten more and more the galling bands of their abfurd monopoly. Compare the mercantile manners of Cadiz and Lifbon with those of Amsterdam, and you will be fensible how differently the conduct and character of merchants are affected by the high and by the low profits of flock. The merchants of London, indeed, have not yet generally become fuch magnificent lords as those of Cadiz and Lifbon; but neither are they in general fuch attentive and parfimonious burghers as those of Amsterdam. They are supposed, however, many of them, to be a good deal richer than the greater part of the former, and not quite fo rich as many of the latter. But the rate of their profit is commonly much lower than that of the former, and a good deal higher than that of the latter. Light come light go, fays the proverb; and the ordinary tone of expence feems every where to be regulated, not fo much according to the real ability of fpending, as to the fuppofed facility of getting money to fpend.

5

Ir

IT is thus that the fingle advantage which the monopoly pro- C H A P. cures to a fingle order of men is in many different ways hurtful to the general intereft of the country.

To found a great empire for the fole purpole of railing up a people of customers, may at first fight appear a project fit only for a nation of shopkeepers. It is, however, a project altogether unfit for a nation of shopkeepers ; but extremely fit for a nation whose government is influenced by fhopkeepers. Such flatefmen, and fuch ftatefmen only, are capable of fancying that they will find fome advantage in employing the blood and treasure of their fellow-citizens, to found and to maintain fuch an empire. Say to a shopkeeper, Buy. me a good effate, and I shall always buy my cloaths at your shop, even though I fhould pay fomewhat dearer than what I can have them for at other fhops; and you will not find him very forward to embrace your propofal. But should any other perfon buy youfuch an effate, the fhopkeeper would be much obliged to your benefactor if he would enjoin you to buy all your cloaths at his shop. England purchafed for fome of her fubjects, who found themfelves uneafy at home, a great eftate in a diftant country. The price, indeed, was very fmall, and inftead of thirty years purchafe, the ordinary price of land in the prefent times, it amounted to little more than the expence of the different equipments which made the first discovery, reconnoitred the coast, and took a fictitious possefiion of the country. The land was good and of great extent, and the cultivators having plenty of good ground to work. upon, and being for fome time at liberty to fell their produce. where they pleafed, became in the course of little more than thirty or forty years (between 1620 and 1660) fo numerous and thriving a people, that the fhopkeepers and other traders. of England withed to fecure to themfelves the monopoly of their cuftom. Without pretending, therefore, that they had paid any part, either of the original purchase money, or of the subsequent expense.

.224 ВООК

expence of improvement, they petitioned the parliament that the cultivators of America might for the future be confined to their fhop; firft, for buying all the goods which they wanted from Europe; and, fecondly, for felling all fuch parts of their own produce as thole traders might find it convenient to buy. For they did not find it convenient to buy every part of it. Some parts of it imported into England might have interfered with fome of the trades which they themfelves carried on at home. Thole particular parts of it, therefore, they were willing that the colonifts fhould fell where they could; the farther off the better; and upon that account propofed that their market fhould be confined to the countries fouth of Cape Finifterre. A claufe in the famous act of navigation eftablished this truly shopkeeper propofal into a law.

THE maintenance of this monopoly has hitherto been the principal, or more properly perhaps the fole end and purpose of the dominion which Great Britain affumes over her colonies. In the exclusive trade, it is fupposed, confists the great advantage of provinces, which have never yet afforded either revenue or military force for the fupport of the civil government, or the defence of the mother country. The monopoly is the principal badge of their dependency, and it is the fole fruit which has hitherto been gathered from that dependency. Whatever expence Great Britain has hitherto laid out in maintaining this dependency, has really been laid out in order to fupport this monopoly. The expence of the ordinary peace establishment of the colonies amounted, before the commencement of the present disturbances, to the pay of twenty regiments of foot; to the expence of the artillery, stores, and extraordinary provisions with which it was necessary to fupply them; and to the expence of a very confiderable naval force which was conflantly kept up, in order to guard, from the fmuggling veffels of other

other nations, the immense coast of North America, and that of our West Indian islands. The whole expence of this peace establishment was a charge upon the revenue of Great Britain, and was, at the fame time, the fmallest part of what the dominion of the colonies has coft the mother country. If we would know the amount of the whole, we must add to the annual expence of this peace establishment the interest of the sums which, in consequence of her confidering her colonies as provinces subject to her dominion, Great Britain has upon different occasions laid out upon their defence. We must add to it, in particular, the whole expence of the late war, and a great part of that of the war which preceded it. The late war was altogether a colony quarrel, and the whole expence of it, in whatever part of the world it may have been laid out, whether in Germany or the East Indies, ought justly to be flated to the account of the colonies. It amounted to more than ninety millions sterling, including not only the new debt which was contracted, but the two shillings in the pound additional land tax, and the fums which were every year borrowed from the finking fund. The Spanish war which began in 1739, was principally a colony quarrel. Its principal object was to prevent the fearch of the colony ships which carried on a contraband trade with the Spanish main. This whole expence is, in reality, a bounty which has been given in order to fupport a monopoly. The pretended purpose of it was to encourage the manufactures, and to increase the commerce of Great Britain. But its real effect has been to raife the rate of mercantile profit, and to enable our merchants to turn into a branch of trade, of which the returns are more flow and diftant than those of the greater part of other trades, a greater proportion of their capital than they otherwife would have done; two events which, if a bounty could have prevented, it might perhaps have been very well worth while to give fuch a bounty.

UNDER

CHAP.

VII.

BOOK IV. UNDER the prefent fystem of management, therefore, Great Britain derives nothing but loss from the dominion which she assures over her colonies.

To propose that Great Britain should voluntarily give up all authority over her colonies, and leave them to elect their own magistrates, to enact their own laws, and to make peace and war as they might think proper, would be to propofe fuch a measure as never was, and never will be adopted, by any nation in the world. No nation ever voluntarily gave up the dominion of any province, how troublefome foever it might be to govern it, and how fmall foever the revenue which it afforded might be in proportion to the expence which it occasioned. Such facrifices, though they might frequently be agreeable to the interest, are always mortifying to the pride of every nation, and what is perhaps of ftill greater confequence, they are always contrary to the private interest of the governing part of it, who would thereby be deprived of the difpofal of many places of truft and profit, of many opportunities of acquiring wealth and diffinction, which the poffeffion of the moft turbulent, and, to the great body of the people, the most unprofitable province feldom fails to afford. The most visionary enthufiast would fcarce be capable of proposing fuch a measure, with any ferious hopes at leaft of its ever being adopted. If it was adoptcd, however, Great Britain would not only be immediately freed from the whole annual expence of the peace eftablishment of the colonics, but might fettle with them fuch a treaty of commerce as would effectually fecure to her a free trade, more advantageous to the great body of the people, though lefs fo to the merchants, than the monopoly which fhe at prefent enjoys. By thus parting good friends, the natural affection of the colonies to the mother country, which, perhaps, our late diffentions have well nigh extinguished, would quickly revive. It might difpofe them not only to refpect, . .... for

for whole centuries together, that treaty of commerce which they had concluded with us at parting, but to favour us in war as well as in trade, and, inftead of turbulent and factious fubjects, to become our most faithful, affectionate, and generous allies; and the fame fort of parental affection on the one fide, and filial respect on the other, might revive between Great Britain and her colonies, which used to fubfist between those of ancient Greece and the mother city from which they descended.

In order to render any province advantageous to the empire to which it belongs, it ought to afford, in time of peace, a revenue to the publick fufficient not only for defraying the whole expence of its own peace eftablishment, but for contributing its proportion to the fupport of the general government of the empire. Every province neceffarily contributes, more or lefs, to increase the expence of that general government. If any particular province, therefore, does not contribute its share towards defraying this expence, an unequal burden must be thrown upon some other part of the empire. The extraordinary revenue too which every province affords to the publick in time of war, ought, from parity of reason, to bear the fame proportion to the extraordinary revenue of the whole empire which its ordinary revenue does in time of peace. That neither the ordinary nor extraordinary revenue which Great Britain derives from her colonies, bears this proportion to the whole revenue of the British empire, will readily be allowed. The monopoly, it has been fuppofed, indeed, by increasing the private revenue of the people of Great Britain, and thereby enabling them to pay greater taxes, compenfates the deficiency of the publick revenue of the colonies. But this monopoly, I have endeavoured to fhow, though a very grievous tax upon the colonies, and though it may increase the revenue of a particular order of men in Great Britain, diminifhes inflead of increasing that of the great body of the people; and confequently diminishes instead of increasing the ability of the great

body

body of the people to pay taxes. The men too whofe revenue the monopoly increafes, conflitute a particular order, which it is both abfolutely impoffible to tax beyond the proportion of other orders, and extremely impolitick even to attempt to tax beyond that proportion, as I fhall endeavour to fhew in the following book. No. particular refource, therefore, can be drawn from this particular order.

THE colonies may be taxed either by their own affemblies, or by the parliament of Great Britain.

THAT the colony affemblies can ever be fo managed as to levy upon their conftituents a publick revenue fufficient, not only to maintain at all times their own civil and military establishment, but to pay their proper proportion of the expence of the general government of the British empire, seems not very probable. It was a long time before even the parliament of England, though placed immediately under the eye of the fovereign, could be brought under fuch a fystem of management, or could be rendered fufficiently liberal in their grants for fupporting the civil and military establishments even of their own country. It was only by distributing among the particular members of parliament, a great part either of the offices, or of the difpofal of the offices arifing from this civil and military establishment, that fuch a system of management could be establifhed even with regard to the parliament of England. But the diftance of the colony allemblies from the eye of the fovereign, their number, their difperfed fituation, and their various conflitutions, would render it very difficult to manage them in the fame manner, even though the fovereign had the fame means of doing it; and those means are wanting. It would be abfolutely impoffible to diffribute among all the leading members of all the colony affemblies fuch a share, either of the offices or of the disposal of the offices arising from

228

BOOK

from the general government of the British empire, as to dispose them to give up their popularity at home and to tax their conflituents for the support of that general government, of which almost the whole emoluments were to be divided among people who were firangers to them. The unavoidable ignorance of administration, besides, concerning the relative importance of the different members of those different affemblies, the offences which must frequently be given, the blunders which must constantly be committed in attempting to manage them in this manner, feems to render such a system of management altogether impracticable with regard to them.

THE colony affemblies, befides, cannot be fuppofed the proper judges of what is neceffary for the defence and fupport of the whole The care of that defence and fupport is not entrusted to empire. them. It is not their bufinefs, and they have no regular means of information concerning it. The affembly of a province, like the veftry of a parish, may judge very properly concerning the affairs of its own particular diffrict; but can have no proper means of judging concerning those of the whole empire. It cannot even judge properly concerning the proportion which its own province bears to the whole empire; or concerning the relative degree of its wealth and importance, compared with the other provinces; becaufe those other provinces are not under the infpection and fuperintendency of the affembly of a particular province. What is neceffary for the defence and fupport of the whole empire, and in what proportion each part ought to contribute, can be judged of only by that affembly which inspects and superintends the affairs of the whole empire.

IT has been proposed, accordingly, that the colonies should be taxed by requisition, the parliament of Great Britain determining the sum which each colony ought to pay, and the provincial assembly assess and CHAP. VH.

**230** BOOK

and levying it in the way that fuited best the circumstances of the province. What concerned the whole empire would in this way be determined by the affembly which infpects and fuperintends the affairs of the whole empire; and the provincial affairs of each colony might fill be regulated by its own affembly. Though the colonies should in this cafe have no reprefentatives in the British parliament, yet, if we may judge by experience, there is no probability that the parliamentary requisition would be unreasonable. The parliament of England has not upon any occasion shown the smallest disposition to overburden those parts of the empire which are not represented in The iflands of Guernfey and Jerfey, without any parliament. means of refifting the authority of parliament, are more lightly taxed than any part of Great Britain. 'Parliament in attempting to exercife its fuppofed right, whether well or ill grounded, of taxing the colonies, has never hitherto demanded of them any thing which even approached to a just proportion to what was paid by their fellowfubjects at home. If the contribution of the colonies, befides, was to rife or fall in proportion to the rife or fall of the land tax; parliament could not tax them without taxing at the fame time its own conftituents, and the colonies might in this cafe be confidered as virtually reprefented in parliament.

EXAMPLES are not wanting of empires in which all the different provinces are not taxed, if I may be allowed the expression, in one mass; but in which the fovereign regulates the sum which each province ought to pay, and in some provinces affess and levies it as he thinks proper; while in others, he leaves it to be affessed and levied as the respective states of each province shall determine. In some provinces of France, the king not only imposes what taxes he thinks proper, but affessed and levies them in the way he thinks proper. From others he demands a certain sum, but leaves it to the states of each province to affess and levy that states they think

3

proper.

proper. According to the fcheme of taxing by requifition, the CHAP. parliament of Great Britain would ftand nearly in the fame fituation towards the colony affemblies, as the king of France does towards the ftates of those provinces which ftill enjoy the privilege of having ftates of their own, the provinces of France which are fuppofed to be the beft governed.

But though, according to this fcheme, the colonies could have no just reason to fear that their share of the publick burdens should ever exceed the proper proportion to that of their fellow-citizens at home; Great Britain might have just reason to fear that it never would amount to that proper proportion. The parliament of Great Britain has not for fome time past had the fame established authority in the colonies, which the French king has in those provinces of France, which still enjoy the privilege of having states of their own. The colony affemblies, if they were not very favourably difpofed (and unlefs more fkilfully managed than they ever have been hitherto, they are not very likely to be fo) might fiill find many pretences for evading or rejecting the most reasonable requifitions of parliament. A French war breaks out, we shall fuppofe; ten millions must immediately be raifed in order to defend the feat of the empire. This fum must be borrowed upon the credit of fome parliamentary fund mortgaged for paying the intereft. Part of this fund parliament propofes to raife by a tax to be levied in Great Britain, and part of it by a requifition to all the different colony affemblies of America and the Weft Indies. Would people readily advance their money upon the credit of a fund, which partly depended upon the good humour of all those affemblies, far distant from the seat of the war, and fometimes, perhaps, thinking themfelves not much concerned in the event of it ? Upon fuch a fund no more money would probably be advanced than what the tax to be levied in Great Britain might be supposed to answer for. The whole burden of the debt contracted

232

BOOK

contracted on account of the war would in this manner fall, as it always has done hitherto, upon Great Britain; upon a part of the empire, and not upon the whole empire. Great Britain is, perhaps, fince the world began, the only flate which, as it has extended its empire, has only increased its expence without once augmenting its refources. Other states have generally difburdened themfelves upon their fubject and fubordinate provinces of the most confiderable part of the expence of defending the empire. Great Britain has hitherto fuffered her fubject and fubordinate provinces to difburden themfelves upon her of almost this whole expence. In order to put Great Britain upon a footing of equality with her own colonies, which the law has hitherto fuppofed to be fubject and fubordinate, it feems necessary, upon the scheme of taxing them by parliamentary requisition, that parliament should have fome means of rendering its requifitions immediately effectual, in cafe the colony affemblies should attempt to evade or reject them; and what those means are, it is not very easy to conceive, and it has not yet been explained.

SHOULD the parliament of Great Britain, at the fame time, be ever fully eftablished in the right of taxing the colonies, even independent of the confent of their own affemblies, the importance of those affemblies would from that moment be at an end, and with it, that of all the leading men of British America. Men defire to have fome share in the management of public affairs chiefly on account of the importance which it gives them. Upon the power which the greater part of the leading men, the natural aristocracy of every country, have of preferving or defending their respective importance, depends the statisty and duration of every system of free government. In the attacks which those leading men are continually making upon the importance of one another, and in the defence of their own, confists the whole play of

of domeflick faction and ambition. The leading men of America, like those of all other countries, defire to preferve their own importance. They feel, or imagine, that if their affemblies, which they are fond of calling parliaments, and of confidering as equal in authority to the parliament of Great Britain, should be fo far degraded as to become the humble ministers and executive officers of that parliament, the greater part of their own importance would be at an end. They have rejected, therefore, the proposal of being taxed by parliamentary requisition, and like other ambitious and high spirited men, have rather chosen to draw the fword in defence of their own importance.

TOWARDS the declension of the Roman republick, the allies of Rome, who had born the principal burden of defending the flate and extending the empire, demanded to be admitted to all the privileges of Roman citizens. Upon being refused, the focial war broke out. During the courfe of that war Rome granted those privileges to the greater part of them, one by one, and in proportion as they detached themfelves from the general confederacy. The parliament of Great Britain infifts upon taxing the colonies; and they refuse to be taxed by a parliament in which they are not reprefented. If to each colony, which should detach itself from the general confederacy, Great Britain should allow such a number of reprefentatives as fuited the proportion of what it contributed to the public revenue of the empire, in confequence of its being fubjected to the fame taxes, and in compensation admitted to the fame freedom of trade with its fellow-fubjects at home; the number of its reprefentatives to be augmented as the proportion of its contribution might afterwards augment; a new method of acquiring importance, a new and more dazzling object of ambition would be prefented to the leading men of each colony. Inftead of piddling for the little prizes which are to be found in what VOL. II. Ηh may

233 СНАР.

VII.

BOOK may be called the paltry raffle of colony faction; they might then hope, from the prefumption which men naturally have in their own ability and good fortune, to draw fome of the great prizes which fometimes come from the wheel of the great state lottery of British politics. Unless this or fome other method is fallen upon, and there feems to be none more obvious than this, of preferving the importance and of gratifying the ambition of the leading men of America, it is not very probable that they will ever voluntarily fubmit to us; and we ought to confider that the blood which must be shed in forcing them to do fo, is every drop of it, the blood either of those who are, or of those whom we wish to have for our fellow citizens. They are very weak who flatter themfelves that, in the flate to which things have come, our colonies will be eafily conquered by force alone. The perfons who now govern the refolutions of what they call their continental congress, feel in themselves at this moment a degree of importance which, perhaps, the greatest subjects in Europe scarce feel. From shopkeepers, tradesmen, and attornies, they are become statesmen and legiflators, and are employed in contriving a new form of government for an extensive empire, which, they flatter themfelves, will become, and which, indeed, feems very likely to become, one of the greatest and most formidable that ever was in the world. Five hundred different people, perhaps, who in different ways act immediately under the continental congress; and five hundred thousand, perhaps, who act under those five hundred, all feel in the fame manner a proportionable rife in their own importance. Almost every individual of the governing party in America, fills, at prefent, in his own fancy, a flation fuperior, not only to what he had ever filled before, but to what he had ever expected to fill; and unless fome new object of ambition is presented either to him or to his leaders, if he has the ordinary fpirit of a man, he will die in defence of that flation. .

234

IT

IT is a remark of the prefident Henaut that we now read with CHAP. pleafure the account of many little transactions of the Ligue, which when they happened were not perhaps confidered as very important pieces of news. But every man then, fays he, fancied himfelf of fome importance; and the innumerable memoirs which have come down to us from those times, were, the greater part of them, written by people who took pleafure in recording and magnifying events in which, they flattered themfelves, they had been confiderable actors. How obstinately the city of Paris upon that occasion defended itself, what a dreadful famine it supported rather than fubmit to-the beft and afterwards the most beloved of all the French kings, is well known. The greater part of the citizens, or those who governed the greater part of them, fought in defence of their own importance, which they forefaw was to be at an end whenever the ancient government fhould be re-eftablished. Our colonies, unlefs they can be induced to confent to a union, are very likely to defend themfelves against the best of all mother countries, as obstinately as the city of Paris did against one of the best of kings.

THE idea of reprefentation was unknown in ancient times. When the people of one flate were admitted to the right of citizenfhip in another, they had no other means of exercifing that right but by coming in a body to vote and deliberate with the people of that other flate. The admiffion of the greater part of the inhabitants of Italy to the privileges of Roman citizens, completely ruined the Roman republick. It was no longer poffible to diftinguifh between who was and who was not a Roman citizen. No tribe could know its own members. A rabble of any kind could be introduced into the affemblies of the people, could drive out the real citizens, and decide upon the affairs of the republick as if they themfelves had been fuch. But though America was to H h 2 fend

fend fifty or fixty new representatives to parliament, the doorkeeper of the houfe of commons could not find any great difficulty in diffinguishing between who was and who was not a member. Though the Roman conftitution, therefore, was neceffarily ruined by the union of Rome with the allied flates of Italy, there is not the least probability that the British constitution would be hurt by the union of Great Britain with her colonies. That conftitution, on the contrary, would be completed by it, and feems to be imperfect without it. The affembly which deliberates and decides concerning the affairs of every part of the empire, in order to be properly informed, ought certainly to have reprefentatives from every part of it. That this union, however, could be eafily effectuated, or that difficulties and great difficulties might not occur in the execution, I do not pretend. I have yet heard of none, however, which appear infurmountable. The principal perhaps arife, not from the nature of things, but from the prejudices and opinions of the people both on this and on the other fide of the Atlantic.

WE, on this fide the water, are afraid left the multitude of American reprefentatives should overturn the balance of the conflitution, and increase too much either the influence of the crown on the one hand, or the force of the democracy on the other. But if the number of American representatives was to be in proportion to the produce of American taxation, the number of people to be managed would increase exactly in proportion to the means of managing them; and the means of managing, to the number of people to be managed. The monarchical and democratical parts of the conflitution would, after the union, ftand exactly in the fame degree of relative force with regard to one another as they had done before.

THE

236

BOOK

IV.

-----

THE people on the other fide of the water are afraid left their CHAP. distance from the feat of government might expose them to many oppreffions. But their representatives in parliament, of which the number ought from the first to be confiderable, would eafily be able to protect them from all oppreffion. The diffance could not much weaken the dependency of the reprefentative upon the conflituent, and the former would still feel that he owed his feat in parliament and all the confequence which he derived from it tothe good will of the latter. It would be the interest of the former, therefore, to cultivate that good-will by complaining withall the authority of a member of the legislature, of every outragewhich any civil or military officer might be guilty of in those remote parts of the empire. The diftance of America from the feat of government, befides, the natives of that country might flatter themfelves, with fome appearance of reafon too, would not be of very long continuance. Such has hitherto been the rapid progrefs of that country in wealth, population and improvement; that in the course of little more than a century, perhaps, the produce of American might exceed that of British taxation. The feat of the empire would then naturally remove itself to that part of the empire which contributed most to the general defence and fupport of the whole.

THE difcovery of America, and that of a paffage to the Eaft Indies by the Cape of Good Hope, are the two greateft and moft important events recorded in the hiftory of mankind. Their confequences have already been very great: but, in the fhort period of between two and three centuries which has elapfed fince thefe. difcoveries were made, it is impoffible that the whole extent of their confequences can have been feen. What benefits, or what misfortunesto mankind may hereafter refult from thofe great events no humanwifdom can forefee. By uniting, in fome meafure, the moft diftant: parts of the world, by enabling them to relieve one another'swants<sub>2</sub>.

wants, to increase one another's enjoyments, and to encourage one another's industry, their general tendency would feem to be beneficial. To the natives, however, both of the East and West Indies, all the commercial benefits which can have refulted from those events have been funk and loft in the dreadful misfortunes which they have occasioned. These misfortunes, however, seem to have arisen rather from accident than from any thing in the nature of those events themselves. At the particular time when these difcoveries were made, the fuperiority of force happened to be fo great on the fide of the Europeans, that they were enabled to commit with impunity every fort of injustice in those remote countries. Hereafter, perhaps, the natives of those countries may grow ftronger, or those of Europe may grow weaker, and the inhabitants of all the different quarters of the world may arrive at that equality of courage and force which, by inspiring mutual fear, can alone overawe the injuffice of independent nations into fome fort of refpect for the rights of one another. But nothing feems more likely to establish this equality of force than that mutual communication of knowledge and of all forts of improvements which an extensive commerce from all countries to all countries naturally, or rather neceffarily, carries along with it.

In the mean time one of the principal effects of those discoveries has been to raife the mercantile fystem to a degree of splendor and glory which it could never otherwise have attained to. It is the object of that system to enrich a great nation rather by trade and manufactures than by the improvement and cultivation of land, rather by the industry of the towns than by that of the country. But, in confequence of those discoveries, the commercial towns of Europe, instead of being the manufacturers and carriers for but a very small part of the world, (that part of Europe which is washed by the Atlantic ocean, and the countries which lie

238

BOOK

lie round the Baltick and Mediterranean feas), have now become the manufacturers for the numerous and thriving cultivators of America, and the carriers, and in fome refpects the manufacturers too, for almost all the different nations of Afia, Africa, and America. Two new worlds have been opened to their industry, each of them much greater and more extensive than the old one, and the market of one of them growing still greater and greater every day.

THE countries which poffers the colonies of America, and which trade directly to the East Indies, enjoy, indeed, the whole shew and fplendor of this great commerce. Other countries, however, notwithftanding all the invidious reftraints by which it is meant to exclude them, frequently enjoy a greater fhare of the real benefit of it. The colonies of Spain and Portugal, for example, give more real encouragement to the industry of other countries than to that of Spain and Portugal. In the fingle article of linen alone the confumption of those colonies amounts, it is faid, but I do not pretend to warrant the quantity, to more than three millions fterling a year. But this great confumption is almost entirely fupplied by France, Flanders, Holland, and Germany. Spain and' Portugal furnish but a small part of it. The capital which suppliesthe colonies with this great quantity of linen is annually diffributed' among, and furnishes a revenue to the inhabitants of those other countries. The profits of it only are fpent in Spain and Portugal, where they help to support the sumptuous profusion of the merchants of Cadiz and Lifbon.

EVEN the regulations by which each nation endeavours to fecure to itfelf the exclusive trade of its own colonies, are frequently more hurtful to the countries in favour of which they are effablished than to those against which they are effablished. The 2 unjust

240

BOOK

unjust oppression of the industry of other countries falls back, if I may fay fo, upon the heads of the oppreffors, and crushes their industry more than it does that of those other countries. By those regulations, for example, the merchant of Hamburgh must fend the linen which he destines for the American market to London, and he must bring back from thence the tobacco which he destines for the German market; because he can neither fend the one directly to America, nor bring back the other directly from thence. By this reftraint he is probably obliged to fell the one fomewhat cheaper, and to buy the other fomewhat dearer than he otherwife might have done; and his profits are probably fomewhat abridged by means of it. In this trade, however, between Hamburgh and London, he certainly receives the returns of his capital much more quickly than he could poffibly have done in the direct trade to America, even though we fhould fuppofe, what is by no means the cafe, that the payments of America were as punctual as those of London. In the trade, therefore, to which those regulations confine the merchant of Hamburgh, his capital can keep in confant employment a much greater quantity of German industry than it poffibly could have done in the trade from which he is excluded. Though the one employment, therefore, may to him perhaps be less profitable than the other, it cannot be less advantageous to his country. It is quite otherwife with the employment into which the monopoly naturally attracts, if I may fay fo, the capital of the London merchant. That employment may, perhaps, be more profitable to him than the greater part of other employments, but, on account of the flowness of the returns, it cannot be more advantageous to his country.

AFTER all the unjust attempts, therefore, of every country in Europe to engross to itself the whole advantage of the trade of its own colonies, no country has yet been able to engross to itself any

thing

thing but the expence of fupporting in time of peace and of defending in time of war the oppreffive authority which it assumes over them. The inconveniencies refulting from the possession of its colonies, every country has engroffed to itfelf completely. The advantages refulting from their trade it has been obliged to fhare with many other countries.

AT first fight, no doubt, the monopoly of the great commerce of America, naturally feems to be an acquifition of the higheft To the undifcerning eye of giddy ambition, it naturally value. prefents itfelf amidst the confused fcramble of politicks and war. as a very dazzling object to fight for. The dazzling fplendor of the object, however, the immenfe greatness of the commerce, is the very quality which renders the monopoly of it hurtful, or which makes one employment, in its own nature neceffarily lefs advantageous to the country than the greater part of other employments, abforb a much greater proportion of the capital of the country than what would otherwife have gone to it.

THE mercantile flock of every country, it has been shewn in the fecond book, naturally feeks, if one may fay fo, the employment most advantageous to that country. If it is employed in the carrying trade, the country to which it belongs becomes the emporium of the goods of all the countries whofe trade that flock carries on. But the owner of that flock neceffarily withes to dispose of as great a part of those goods as he can at home. He thereby faves himself the trouble, rifk, and expence, of exportation, and he will upon that account be glad to fell them at home, not only for a much fmaller price, but with fomewhat a fmaller profit than he might expect to make by fending them abroad. He naturally, therefore, endeavours as much as he can to turn his carrying trade into a foreign trade of confumption. If his flock again is employed in a foreign trade of confumption, he will, for the fame reason, be glad I i to

VOL. II.

CHAP.

to difpose of at home as great a part as he can of the home goods, which he collects in order to export to fome foreign market, and he will thus endeavour as much as he can, to turn his foreign trade of confumption into a home trade. The mercantile flock of every country naturally courts in this manner the near, and fhuns the diftant employment; naturally courts the employment in which the returns are, frequent, and fhuns that in which they are diftant and flow; naturally courts the employment in which it can maintain the greatest quantity of productive labour in the country to which it belongs, or in which its owner refides, and fhuns that in which it can maintain there the fmalleft quantity. It naturally courts the employment which in ordinary cafes is most advantageous, and fhuns that which in ordinary cafes is leaft advantageous to that country.

- But if in any of those distant employments, which in ordinary cafes are lefs advantageous to the country, the profit fhould happen to rife fomewhat higher than what is fufficient to balance the natural preference which is given to nearer employments, this fuperiority of profit will draw flock from those nearer employments, till the profits of all return to their proper level. This superiority of profit, however, is a proof that in the actual circumftances of the fociety, those distant employments are fomewhat understocked in proportion to other employments, and that the flock of the fociety is not diffributed in the propereft manner among all the different employments carried on in it. It is a proof that fomething is either bought cheaper or fold dearer than it ought to be, and that fome particular clafs of citizens is more or lefs oppreffed either by paying more or by getting lefs than what is fuitable to that equality, which ought to take place. and which naturally does take place among all the different claffes of them. Though the fame capital never will maintain the fame quantity of productive labour in a diftant as in a near employment, yet a diftant employment may be as neceffary for the welfare of the fociety

242

BOOK

fociety as a near one; the goods which the diftant employment CHAP. deals in being neceffary, perhaps, for carrying on many of the nearer employments. But if the profits of those who deal in fuch goods are above their proper level, those goods will be fold dearer than they ought to be, or fomewhat above their natural price, and all those engaged in the nearer employments will be more or lefs oppreffed by this high price. Their interest, therefore, in this cafe requires that fome flock should be withdrawn from those nearer employments, and turned towards that diftant one, in order to reduce its profits to their proper level, and the price of the goods which it deals in to their natural price. In this extraordinary cafe, the publick interest requires that fome stock should be withdrawn from those employments which in ordinary cases are more advantageous, and turned towards one which in ordinary cafes is lefs advantageous to the publick : and in this extraordinary cafe, the natural interefts and inclinations of men coincide as exactly with the publick interest as in all other ordinary cases, and lead them to withdraw flock from the near, and to turn it towards the distant employment.

IT is thus that the private interefts and paffions of individuals naturally difpofe them to turn their flock towards the employments which in ordinary cafes are most advantageous to the fociety. But if from this natural preference they should turn too much of it towards those employments, the fall of profit in them and the rife of it in all others immediately dispose them to alter this faulty distribution. Without any intervention of law, therefore, the private interefts and passions of men naturally lead them to divide and distribute the flock of every fociety, among all the different employments carried on in it, as nearly as possible in the proportion which is most agreeable to the interest of the whole fociety.

Ii 2

All

BOOK

ALL the different regulations of the mercantile fystem, neceffarily derange more or lefs this natural and most advantageous distribution of stock. But those which concern the trade to America and the East Indies derange it perhaps more than any other; because the trade to those two great continents absorbs a greater quantity of flock than any two other branches of trade. The regulations, however, by which this derangement is effected in those two. different branches of trade are not altogether the fame. Monopoly is the great engine of both; but it is a different fort of monopoly. Monopoly of one kind or another, indeed, seems to be the fole engine of the mercantile fystem.

In the trade to America every nation endeavours to engrofs as much as poffible the whole market of its own colonies, by fairly excluding all other nations from any direct trade to them. During the greater part of the fixteenth century, the Portugueze endeavoured to manage the trade to the Eaft Indies in the fame manner, by claiming the fole right of failing in the Indian feas, on account of the merit of having firft found out the road to them. The Dutch ftill continue to exclude all other European nations from any direct trade to their fpice iflands. Monopolies of this kind are evidently eftablifhed againft all other European nations, who are thereby not only excluded from a trade to which it might be convenient for them to turn fome part of their flock, but are obliged to buy the goods which that trade deals in fomewhat dearer, than if they could import them themfelves directly from the countries which produce them.

BUT fince the fall of the power of Portugal, no European nation has claimed the exclusive right of failing in the Indian feas, of which the principal ports are now open to the fhips of all European nations. Except in Portugal, however, and within these few years in France, the

the trade to the East Indies has in every European country been fubjected to an exclusive company. Monopolies of this kind are properly established against the very nation which erects them. The greater part of that nation are thereby not only excluded from a trade to which it might be convenient for them to turn fome part of their flock, but are obliged to buy the goods which that trade deals in, fomewhat dearer than if it was open and free to all their countrymen. Since the eftablishment of the English East India company, for example, the other inhabitants of England, over and above being excluded from the trade, must have paid in the price of the East India goods which they have confumed, not only for all the extraordinary profits which the company may have made upon those goods in confequence of their monopoly, but for all the extraordinary wafte which the fraud and abufe, infeparable from the management of the affairs of fo great a company, must neceffarily have occafioned. The abfurdity of this fecond kind of monopoly, therefore, is much more manifest than that of the firft.

BOTH these kinds of monopolies derange more or less the natural distribution of the stock of the society: but they do not always derange it in the same way.

MONOPOLIES of the first kind always attract to the particular trade in which they are established, a greater proportion of the stock of the fociety than what would go to that trade of its own accord.

MONOPOLIES of the fecond kind, may fometimes attract flock towards the particular trade in which they are effablished, and fometimes repel it from that trade according to different circumflances. In poor countries they naturally attract towards that trade more flock than would otherwife go to it. In rich countries they. CHAP.

VII.

246

IV. BOOK they naturally repel from it a good deal of flock which would otherwife go to it.

SUCH poor countries as Sweden and Denmark, for example, would probably have never fent a fingle fhip to the Eaft Indies, had not the trade been fubjected to an exclusive company. The eftablifhment of fuch a company neceffarily encourages adventurers. Their monopoly fecures them againft all competitors in the home market, and they have the fame chance for foreign markets with the traders of other nations. Their monopoly fhows them the certainty of a great profit upon a confiderable quantity of goods, and the chance of a confiderable profit upon a great quantity. Without fuch extraordinary encouragement, the poor traders of fuch poor countries would probably never have thought of hazarding their fmall capitals in fo very diftant and uncertain an adventure as the trade to the Eaft Indies muft naturally have appeared to them.

SUCH a rich country as Holland, on the contrary, would probably, in the cafe of a free trade, fend many more ships to the East Indies than it actually does. The limited flock of the Dutch East India company probably repels from that trade many great mercantile capitals which would otherwife go to it. The mercantile capital of Holland is fo great that it is, as it were, continually overflowing, fometimes into the public funds of foreign countries, fometimes into loans to private traders and adventurers of foreign countries, fometimes into the most round-about foreign trades of confumption, and fometimes into the carrying trade. All near employments being completely filled up, all the capital which can be placed in them with any tolerable profit being already placed in them, the capital of Holland neceffarily flows towards the most distant employments. The trade to the East Indies, if it was altogether free, would probably absorb the greater

greater part of this redundant capital. The East Indies offer a CHAP. market both for the manufactures of Europe and for the gold and filver as well as for feveral other productions of America, greater and more extensive than both Europe and America put together.

EVERY derangement of the natural distribution of stock is necesfarily hurtful to the fociety in which it takes place; whether it be by repelling from a particular trade the flock which would otherwife go to it, or by attracting towards, a particular trade that which would not otherwife come to it. If without any exclusive company, the trade of Holland to the East Indies would be greater than it actually is, that country must fuffer a confiderable loss by part of its capital being excluded from the employment most convenient for that part. And in the fame manner, if without an exclufive company, the trade of Sweden and Denmark to the East Indies would be lefs than it actually is, or, what perhaps is more probable, would not exift at all, those two countries must likewise suffer a confiderable lofs by part of their capital being drawn into an employment which must be more or lefs unfuitable to their prefent circumftances. Better for them, perhaps, in their present circumstances to buy East India goods of other nations, even though they should pay fomewhat dearer, than to turn fo great a part of their fmall capital to fo very diftant a trade, in which the returns are fo very flow, in which that capital can maintain fo finall a quantity of productive labour at home, where productive labour is fo much wanted. where so little is done, and where so much is to do.

THOUGH without an exclusive company, therefore, a particular country should not be able to carry on any direct trade to the East Indies, it will not from thence follow that such a company ought to be established there, but only that such a country ought not in these.

248 воок

these circumftances to trade directly to the East Indies. That fuch companies are not in general necessary for carrying on the East India trade, is fufficiently demonstrated by the experience of the Portuguese, who enjoyed almost the whole of it for more than a century together without any exclusive company.

No private merchant, it has been faid, could well have capital fufficient to maintain factors and agents in the different ports of the East Indies, in order to provide goods for the ships which he might occafionally fend thither; and yet, unlefs he was able to do this, the difficulty of finding a cargo might frequently make his ships lofe the feafon for returning, and the expence of fo long a delay would not only eat up the whole profit of the adventure, but frequently occasion a very confiderable lofs. This argument, however, if it proved any thing at all, would prove that no one great branch of trade could be carried on without an exclusive company, which is contrary to the experience of all nations. There is no great branch of trade in which the capital of any one private merchant is fufficient, for carrying on all the fubordinate branches which must be carried on, in order to carry on the principal one. But when a nation is ripe for any great branch of trade, fome merchants naturally turn their capitals towards the principal, and fome towards the fubordinate branches of it; and though all the different branches of it are in this manner carried on, yet it very feldom happens that they are all carried on by the capital of one private merchant. If a nation, therefore, is ripe for the East India trade, a certain portion of its capital will naturally divide itfelf among all the different branches of that trade. Some of its merchants will find it for their interest to refide in the East Indies, and to employ their capitals there in providing goods for the ships which are to be fent out by other merchants who refide in Europe. The fettlements which

which different European nations have obtained in the East Indies, if they were taken from the exclusive companies to which they at prefent belong and put under the immediate protection of the fovevereign, would render this refidence both fafe and eafy, at leaft to the merchants of the particular nations to whom those fettlements belong. If at any particular time that part of the capital of any country which of its own accord tended and inclined, if I may fay fo, towards the East India trade, was not fufficient for carrying on all those different branches of it, it would be a proof that, at that particular time, that country was not ripe for that trade, and that it would do better to buy for some time, even at a higher price, from other European nations, the East India goods it had occasion for, than to import them itfelf directly from the East Indies. What it might lofe by the high price of those goods could feldom be equal to the loss which it would fustain by the distraction of a large portion of its capital from other employments more neceffary, or more uleful, or more fuitable to its circumftances and fituation, than a direct trade to the East Indies.

THOUGH the Europeans possess many confiderable fettlements both upon the coaft of Africa and in the East Indies, they have not yet established in either of those countries such numerous and thriving colonies as those in the illands and continent of America. Africa, however, as well as feveral of the countries comprehended under the general name of the East Indies, are inhabited by barbarous nations. But those nations were by no means fo weak and defenceless as the miferable and helpless Americans; and in proportion to the natural fertility of the countries which they inhabited, they were befides much more populous. The most barbarous nations either of Africa or of the East Indies were shepherds; even the Hottentots were fo. But the natives of every part of America, except Mexico and Peru, were only hunters; and the difference is VOL. II. Kk very

249

CHAP. VII.

250 BOO

BOOK very great between the number of shepherds and that of hunters whom the fame extent of equally fertile territory can maintain. In Africa and the East Indies, therefore, it was more difficult to displace the natives, and to extend the European plantations over the greater part of the lands of the original inhabitants. The genius of exclusive companies, befides, is unfavourable, it has already been observed, to the growth of new colonies, and has probably been the principal caufe of the little progress which they have made in the East Indies. The Portuguese carried on the trade both to Africa and the East Indies without any exclusive companies, and their fettlements at Congo, Angola, and Benguela on the coast of Africa, and at Goa in the East Indies, though much depressed by superstition and every fort of bad government, yet bear fome faint refemblance to the colonies of America, and are partly inhabited by Portuguele who have been established there for feveral generations. The Dutch fettlements at the Cape of Good Hope and at Batavia, are at prefent the most confiderable colonies which the Europeans have established either in Africa or in the East Indies, and both these fettlements are peculiarly fortunate in their fituation. The Cape of Good Hope was inhabited by a race of people almost as barbarous and quite as incapable of defending themfelves as the natives of America. It is befides the half-way house, if one may fay fo, between Europe and the East Indies, at which almost every European ship makes fome ftay both in going and returning. The fupplying of those ships with. every fort of fresh provisions, with fruit and sometimes with wine, affords alone a very extensive market for the furplus produce of the colonists. What the Cape of Good Hope is between Europe and every part of the East Indies, Batavia is between the principal countries of the East Indies. It lies upon the most frequented road from Indostan to China and Japan, and is nearly about mid-way upon that road. Almost all the ships too that fail between Europe

Europe and China touch at Batavia; and it is, over and above all CHAP. this, the center and principal mart of what is called the country y trade of the East Indies; not only of that part of it which is carried on by Europeans, but of that which is carried on by the native Indians; and veffels navigated by the inhabitants of China and Japan, of Tonquin, Malacca, Cochin-China, and the island of Celebes, are frequently to be feen in its port. Such advantageous fituations have enabled those two colonies to furmount all the obstacles which the oppreffive genius of an exclusive company may have occasionally oppoled to their growth. They have enabled Batavia to furmount the additional difadvantage of perhaps the most unwholesome climate in the world.

THE English and Dutch companies, though they have established no confiderable colonies, except the two above mentioned, have both made confiderable conquests in the East Indies. But in the manner in which they both govern their new fubjects, the natural genius of an exclusive company has shown itself most distinctly. In the spice islands the Dutch are faid to burn all the spiceries which a fertile feason produces beyond what they expect to difpofe of in Europe with fuch a profit as they think fufficient. In the illands where they have no fettlements, they give a premium to those who collect the young bloffoms and green leaves of the clove and nutmeg trees which naturally grow there, but which this favage policy has now, it is faid, almost completely extirpated. Even in the islands where they have fettlements they have very much reduced, it is faid, the number of those trees. If the produce even of their own islands was much greater than what fuited their market, the natives, they fuspect, might find means to convey some part of it to other nations ; and the best way, they imagine, to fecure their own monopoly, is to take care that no more shall grow than what they themselves carry to market. By different arts of oppreffion they have reduced the population of feveral of the Moluccas nearly to the number which VII.

Kk 2

is

BOOK is fufficient to fupply with fresh provisions and other necessaries of life their own infignificant garrifons, and fuch of their fhips as occafionally come there for a cargo of fpices. Under the government even of the Portuguese, however, those islands are faid to have been tolerably well inhabited. The English company have not yet had time to establish in Bengal so perfectly destructive a fystem. The plan of their government, however, has had exactly the fame tendency. It has not been uncommon, I am well affured, for the chief, that is, the first clerk of a factory, to order a peafant to plough up a rich field of poppies, and fow it with rice or fome other grain. The pretence was, to prevent a fcarcity of provisions; but the real reason, to give the chief an opportunity of felling at a better price a large quantity of opium, which he happened then to have upon hand. Upon other occasions the order has been reverfed ; and a rich field of rice or other grain has been ploughed up in order to make room for a plantation of poppies; when the chief forefaw that extraordinary profit was likely to be made by opium. The fervants of the company have upon feveral occasions attempted to establish in their own favour the monopoly of some of the most important branches, not only of the foreign, but of the inland trade of the country. Had they been allowed to go on, it is impoffible that they should not at some time or another have attempted to reftrain the production of the particular articles of which they had thus usurped the monopoly, not only to the quantity which they themfelves could purchafe, but to that which they could expect to fell with fuch a profit as they might think fufficient. In the courfe of a century or two, the policy of the English company would in this manner have probably proved as completely deftructive as that of the Dutch.

> NOTHING, however, can be more directly contrary to the real interest of those companies, confidered as the sovereigns of the countries which they have conquered, than this destructive plan. In

In almost all countries the revenue of the fovereign is drawn from that of the people. The greater the revenue of the people, therefore, the greater the annual produce of their land and labour, the more they can afford to the fovereign. It is his interest, therefore, to increase as much as possible that annual produce. But if this is the intereft of every fovereign, it is peculiarly fo of one whofe revenue, like that of the fovereign of Bengal, arifes chiefly from a land-rent. That rent must necessarily be in proportion to the quantity and value of the produce, and both the one and the other must depend upon the extent of the market. The quantity will always be fuited with more or lefs exactnefs to the confumption of those who can afford to pay for it, and the price which they will pay will always be in proportion to the eagerness of their competition, It is the intereft of fuch a fovereign, therefore, to open the most extensive market for the produce of his country, to allow the most perfect freedom of commerce, in order to increase as much as poffible the number and the competition of buyers; and upon this account to abolifh, not only all monopolies, but all reftraints upon the transportation of the home produce from one part of the country to another, upon its exportation to foreign countries, or upon the importation of goods of any kind for which it can be exchanged. He is in this manner most likely to increase both the quantity and value of that produce, and confequently of his own fhare of it, or. of his own revenue.

BUT a company of merchants are, it feems, incapable of confidering themfelves as fovereigns, even after they have become fuch. Trade, or buying in order to fell again, they flill confider as their principal bufinefs, and by a flrange abfurdity, regard the character of the fovereign as but an appendix to that of the merchant, as fomething which ought to be made fubfervient to it, or by means of which they may be enabled to buy cheaper in India and thereby to-

8

253

fell

254

# THE NATURE AND CAUSES OF

BOOK I

fell with a better profit in Europe. They endeavour for this purpose to keep out as much as possible all competitors from the market of the countries which are fubject to their government, and confequently to reduce, at leaft, fome part of the furplus produce of those countries to what is barely fufficient for fupplying their own demand, or to what they can expect to fell in Europe with fuch a profit as they may think reasonable. Their mercantile habits draw them in this manner, almost necessarily, though perhaps infensibly, to prefer upon all ordinary occasions the little and transitory profit of the monopolift to the great and permanent revenue of the fovereign, and would gradually lead them to treat the countries fubject to their government nearly as the Dutch treat the Moluccas. It is the intereft of the East India company, confidered as fovereigns, that the European goods which are carried to their Indian dominions, should be fold there as cheap as poffible; and that the Indian goods which are brought from thence fhould bring there as good a price, or fhould be fold there as dear as poffible. But the reverse of this is their interest as merchants. As fovereigns, their interest is exactly the fame with that of the country which they govern. As merchants their interest is directly opposite to that interest.

But if the genius of fuch a government, even as to what concerns its direction in Europe, is in this manner effentially and perhaps incurably faulty, that of its administration in India is still more fo. That administration is necessarily composed of a council of merchants, a profession no doubt extremely respectable, but which in no country in the world carries along with it that fort of authority which naturally over-awes the people, and without force commands their willing obedience. Such a council can command obedience only by the military force with which they are accompanied, and their government is therefore necessarily military and despotical. Their proper business, however, is that of merchants. It is to fell,

fell, upon their mafters account, the European goods configned to CHAP. them, and to buy in return Indian goods for the European market. It is to fell the one as dear and to buy the other as cheap as poffible, and confequently to exclude as much as poffible all rivals from the particular market where they keep their flop. The genius of the administration, therefore, fo far as concerns the trade of the company, is the fame as that of the direction. It tends to make government fubfervient to the interest of monopoly, and confequently to funt the natural growth of fome parts at least of the furplus produce of the country to what is barely fufficient for. answering the demand of the company.

ALL the members of the administration, besides, trade more or less upon their own account, and it is in vain to prohibit them from doing fo. Nothing can be more completely foolifh than to expect that the clerks of a great counting-houfe at ten thoufand miles diftance, and confequently almost quite out of fight, should, upon a fimple order from their masters, give up at once doing any fort of bufiness upon their own account, abandon for ever all hopes of making a fortune of which they have the means in their hands, and content themfelves with the moderate falaries which those masters allow them, and which, moderate as they are, can feldom be augmented, being commonly as large as the real profits of the company trade can afford. In fuch circumstances, to prohibit the fervants of the company from trading upon their own account, can have fcarce any other effect than to enable the fuperior fervants, under pretence of executing their mafters order, to oppress fuch of the inferior ones as have had the misfortune to fall under their difpleafure. The fervants naturally endeavour to establish the fame monopoly in favour of their own private trade as of the publick trade of the company. If they are fuffered to act as they could wifh, they will establish this monopoly openly and directly, by fairly prohibiting all. 255

VII.

BOOK all other people from trading in the articles in which they chufe to deal; and this perhaps is the beft and leaft oppreffive way of eftablifhing it. But if by an order from Europe they are prohibited from doing this, they will, notwithstanding, endeavour to establish a monopoly of the fame kind, fecretly and indirectly, in a way that is much more deftructive to the country. They will employ the whole authority of government, and pervert the administration of juffice, in order to harafs and ruin those who interfere with them in any branch of commerce which, by means of agents, either concealed or at leaft not publickly avowed, they may chufe to carry on. But the private trade of the fervants will naturally extend to a much greater variety of articles than the publick trade of the company. The publick trade of the company extends no further than the trade with Europe, and comprehends a part only of the foreign trade of the country. But the private trade of the fervants may extend to all the different branches both of its inland and foreign trade. The monopoly of the company can tend only to ftunt the natural growth of that part of the furplus produce which, in the cafe of a free trade, would be exported to Europe. That of the fervants tends to funt the natural growth of every part of the produce in which they chufe to deal, of what is defined for home confumption, as well as of what is defined for exportation; and confequently to degrade the cultivation of the whole country, and to reduce the number of its inhabitants. It tends to reduce the quantity of every fort of produce, even that of the necessaries of life, whenever the fervants of the company chufe to deal in them, to what those fervants can both afford to buy and expect to fell with fuch a profit as pleafes them.

> FROM the nature of their fituation too the fervants must be more difposed to support with rigorous feverity their own interest against that of the country which they govern, than their masters can be to support

fupport theirs. The country belongs to their mafters, who cannot C H A P. avoid having fome regard for the interest of what belongs to them. But it does not belong to the fervants. The real intereft of their masters\*, if they were capable of understanding it, is the fame with that of the country, and it is from ignorance chiefly, and the meannefs of mercantile prejudice, that they ever oppress it. But the real intereft of the fervants is by no means the fame with that of the country, and the most perfect information would not necessarily put an end to their oppreffions. The regulations accordingly which have been fent out from Europe, though they have been frequently weak, have upon most occasions been well-meaning. More intelligence and perhaps lefs good-meaning has fometimes appeared in those eftablished by the fervants in India. It is a very fingular government in which every member of the administration wifhes to get out of the country, and confequently to have done with the government, as foon as he can, and to whole interest, the day after he has left it and carried his whole fortune with him, it is perfectly indifferent though the whole country was fwallowed up by an earthquake.

\* This would be exactly true if those masters never had any other interest but that which belongs to them as Proprietors of India flock. But they frequently have another of much greater importance. Frequently a man of great, fometimes even a man of moderate fortune, is willing to give thirteen or fourteen hundred pounds (the prefent price of a thousand pounds share in India stock) merely for the influence which he expects to acquire by a vote in the Court of Proprietors. It gives him a fhare, though not in the plunder, yet in the appointment of the plunderers of India; the Directors, though they make those appointments, being neceffarily more or less under the influence of the Court of Proprietors, which not only elects them, but fometimes over-rules their appointments. A man of great or even a man of moderate fortune, provided he can enjoy this influence for a few years, and thereby get a certain number of his friends appointed to employments in India, frequently cares little about the dividend which he can expect from fo fmall a capital, or even about the improvement or lofs of the capital itfelf upon which his vote is founded. About the profperity or ruin of the great empire, in the government of which that vote gives him a fhare, he feldom cares at all. No other fovereigns ever were, or from the nature of things ever could be, fo perfectly indifferent about the happiness or misery of their subjects, the improvement or waste of their dominions, the glory or difgrace of their administration; as, from irrefistible moral causes, the greater part of the Proprietors of fuch a mercantile Company are, and neceffarily must be.

VOL. H.

IMEAN

258

BOOK

I MEAN not, however, by any thing which I have here faid, to throw any odious imputation upon the general character of the fervants of the East India company, and much less upon that of any particular perfons. It is the fystem of government, the fituation in which they were placed, that I mean to cenfure; not the character of those who have acted in it. They acted as their fituation naturally directed, and they who have clamoured the loudeft against them would probably not have acted better themfelves. In war and negociation, the councils of Madrafs and Calcutta have upon feveral occafions conducted themfelves with a refolution and decifive wifdom which would have done honour to the fenate of Rome in the beft days of that republick. The members of those councils, however, had been bred to professions very different from war and politicks. But their fituation alone, without education, experience, or even example, feems to have formed in them all at once the great qualities which it required, and to have infpired them both with abilities and virtues which they themfelves could not well know that they poffeffed. If upon fome occasions, therefore, it has animated them to actions of magnanimity which could not well have been expected from them ; we fhould not wonder if upon others it has prompted them to exploits. of fomewhat a different nature.

SUCH exclusive companies, therefore, are nuifances in every refpect; always more or lefs inconvenient to the countries in which they are established, and destructive to those which have the misfortune to fall under their government.

CHAP

### CHAP. VIII.

Of the agricultural Systems, or of those Systems of political Oeconomy which represent the Produce of Land as either the sole or the principal Source of the Revenue and Wealth of every Country.

THE agricultural fystems of political œconomy will not require CHAP. fo long an explanation as that which I have thought it neceffary to beftow upon the mercantile or commercial fystem.

THAT fystem which represents the produce of land as the fole fource of the revenue and wealth of every country, has, fo far as I know, never been adopted by any nation, and it at present exists only in the speculations of a few men of great learning and ingenuity in France. It would not, furely, be worth while to examine at great length the errors of a system which never has done, and probably never will do any harm in any part of the world. I shall endeavour to explain, however, as distinctly as I can, the great outlines of this very ingenious system.

MR. Colbert, the famous minister of Lewis XIVth, was a man of probity, of great industry and knowledge of detail; of great experience and acuteness in the examination of publick accounts, and of abilities, in short, every way fitted for introducing method and good order into the collection and expenditure of the publick revenue. That minister had unfortunately embraced all the prejudices of the mercantile system, in its nature and effence a system of restraint and regulation, and such as could fearce fail to be agreeable to a laborious and plodding man of business, who had been accustomed to regulate the different departments of publick offices, and to effablish the necessary checks and controuls for confining each to its proper system. The industry and commerce of a great country he endeavoured to regulate upon the fame model as the departments of a

L12

publick

260

BOOK

Land

publick office; and inflead of allowing every man to purfue his own interest his own way, upon the liberal plan of equality, liberty and juffice, he beftowed upon certain branches of induftry extraordinary privileges, while he laid others under as extraordinary reftraints. He was not only difpofed, like other European ministers, to encourage more the industry of the towns than that of the country, but in order to fupport the industry of the towns, he was willing even to deprefs and keep down that of the country. In order to render provisions cheap to the inhabitants of the towns, and thereby to encourage manufactures and foreign commerce, he prohibited altogether the exportation of corn, and thus excluded the inhabitants of the country from every foreign market for by far the most important part of the produce of their industry. This prohibition, joined to the restraints imposed by the antient provincial laws of France upon the transportation of corn from one province to another, and to the arbitrary and degrading taxes which are levied upon the cultivators in almost all the provinces, discouraged and kept down the agriculture of that country very much below the flate to which it would naturally have rifen in fo very fertile a foil and fo very happy a climate. This state of discouragement and depression was felt more or less in every different part of the country, and many different enquiries were fet on foot concerning the causes of it. One of those causes appeared to be the preference given, by the inflitutions of Mr. Colbert, to the industry of the towns above that of the country.

IF the rod be bent too much one way, fays the proverb, in order to make it ftraight you muft bend it as much the other. The French. philofophers, who have proposed the fystem which represents agriculture as the fole fource of the revenue and wealth of every country, feem to have adopted this proverbial maxim; and as in the plan of Mr. Colbert the industry of the towns was certainly over-valued in. comparison with that of the country; fo in their fystem it feems to be as certainly under-valued.

THE

THE different orders of people who have ever been fuppofed to CHAP. contribute in any refpect towards the annual produce of the land and labour of the country, they divide into three claffes. The first is the class of the proprietors of land. The fecond is the class of the cultivators, of farmers and country labourers, whom they honour with the peculiar appellation of the productive class. The third is the class of artificers, manufacturers and merchants, whom they endeavour to degrade by the humiliating appellation of the barren or unproductive class.

THE class of proprietors contributes to the annual produce by the expence which they may occafionally lay out upon the improvement of the land, upon the buildings, drains, enclofures and other ameliorations, which they may either make or maintain upon it, and by means of which the cultivators are enabled, with the fame capital, to raife a greater produce, and confequently to pay a greater rent. This advanced rent may be confidered as the interest or profit due to the proprietor upon the expence or capital which he thus employs in the improvement of his land. Such expences are in this fyftem called' ground expences (depenfes foncieres).

THE cultivators or farmers contribute to the annual produce. by what are in this fyftem called the original and annual expences. (depenfes primitives et depenfes annuelles) which they lay out upon the cultivation of the land. The original expences confiftin the inftruments of hufbandry, in the flock of cattle, in the feed, and in the maintenance of the farmer's family, fervants and cattle, during at least a great part of the first year of his occupancy, or till he can receive fome return from the land. The annual expences. confift in the feed, in the wear and tear of the inftruments of hufbandry, and in the annual maintenance of the farmer's fervants and cattle, and of his family too, fo far as any part of them can be confidered as fervants employed in cultivation. That part of the produce

of

BOOK of the land which remains to him after paying the rent, ought to be fufficient, first, to replace to him within a reasonable time, at least during the term of his occupancy, the whole of his original expences, together with the ordinary profits of flock; and, fecondly, to replace to him annually the whole of his annual expences, together likewife with the ordinary profits of flock. Those two forts of expences are two capitals which the farmer employs in cultivation; and unlefs they are regularly reftored to him, together with a reafonable profit, he cannot carry on his employment upon a level with other employments; but, from a regard to his own interest, must desert it as soon as poffible, and feek fome other. That part of the produce of the land which is thus neceffary for enabling the farmer to continue his bufinefs, ought to be confidered as a fund facred to cultivation, which if the landlord violates, he neceffarily reduces the produce of his own land, and in a few years not only difables the farmer from paying this racked rent, but from paying the reafonable rent which he might otherwife have got for his land. The rent which properly belongs to the landlord, is no more than the neat produce which remains after paying in the compleateft manner all the neceffary expences which must be previously laid out in order to raife the gross, or the whole produce. It is becaufe the labour of the cultivators, over and above paying compleatly all those neceffary expences, affords a neat produce of this kind, that this class of people are in this fyftem peculiarly diffinguished by the honourable appellation of the productive class. Their original and annual expences are for the fame reason called, in this system, productive expences, because, over and above replacing their own value, they occasion the annual reproduction of this neat produce.

> THE ground expences, as they are called, or what the landlord lays out upon the improvement of his land, are in this fystem too honoured with the appellation of productive expences. Till the whole of those expences, together with the ordinary profits of flock, have

2

have been compleatly repaid to him by the advanced rent which he C gets from his land, that advanced rent ought to be regarded as facred and inviolable, both by the 'church and by the king; ought to be fubject neither to tithe nor to taxation. If it is otherwife, by difcouraging the improvement of land, the church difcourages the future increase of her own tithes, and the king the future increase of his own taxes. As in a well ordered state of things, therefore, those ground expences, over and above reproducing in the compleatest manner their own value, occasion likewife after a certain time a reproduction of a neat produce, they are in this fystem confidered as productive expences.

The ground expences of the landlord, however, together with the original and the annual expences of the farmer, are the only three forts of expences which in this fyftem are confidered as productive. All other expences and all other orders of people, even those who in the common apprehensions of men are regarded as the most productive, are in this account of things represented as altogether barren and unproductive.

ARTIFICERS and manufacturers, in particular, whole induftry, in the common apprehensions of men, increases fo much the value of the rude produce of land, are in this fystem represented as a class of people altogether barren and unproductive. Their labour, it is faid, replaces only the flock which employs them, together with its ordinary profits. That flock confists in the materials, tools, and wages, advanced to them by their employer; and is the fund deftined for their employment and maintenance. Its profits are the fund defined for the maintenance of their employer. Their employer, as he advances to them the flock of materials, tools and wages neceffary for their employment, fo he advances to himfelf what is neceffary for his own maintenance, and this maintenance hegenerally proportions to the profit which he expects to make by the price263

CHAP.

BOOK price of their work. Unlefs its price repays to him the maintenance which he advances to himfelf, as well as the materials, tools and wages which he advances to his workmen, it evidently does not repay to him the whole expence which he lays out upon it. The profits of manufacturing flock, therefore, are not, like the rent of land. a neat produce which remains after compleatly repaying the whole expence which must be laid out in order to obtain them. The flock of the farmer yields him a profit as well as that of the mafter manufacturer; and it yields a rent likewife to another perfon, which that of the master manufacturer does not. The expence, therefore, laid out in employing and maintaining artificers and manufacturers, does no more than continue, if one may fay fo, the existence of its own value, and does not produce any new value. It is therefore altogether a barren and unproductive expence. The expence, on the contrary, laid out in employing farmers and country labourers, over and above continuing the existence of its own value, produces a new value, the rent of the landlord. It is therefore a productive expence.

> MERCANTILE flock is equally barren and unproductive with manufacturing flock. It only continues the existence of its own value, without producing any new value. Its profits are only the repayment of the maintenance which its employer advances to himfelf during the time that he employs it, or till he receives the returns of it. They are only the repayment of a part of the expence which must be laid out in employing it.

> THE labour of artificers and manufacturers never adds any thing to the value of the whole annual amount of the rude produce of the land. It adds indeed greatly to the value of fome particular parts of it. But the confumption which in the mean time it occasions of other parts, is precifely equal to the value which it adds to those parts; fo that the value of the whole amount is not, at any one moment of time, in the leaft augmented by it. The perfon who works the lace

> > of

264

IV.

of a pair of fine ruffles, for example, will fometimes raife the value of perhaps a pennyworth of flax to thirty pounds sterling. But though at first fight he appears thereby to multiply the value of a part of the rude produce about feven thousand and two hundred times, he in reality adds nothing to the value of the whole annual amount of the rude produce. The working of that lace cofts him perhaps two years labour. The thirty pounds which he gets for it when it is finished, is no more than the repayment of the sublishence which he advances to himfelf during the two years that he is employed about The value which, by every day's, month's, or year's labour, it. he adds to the flax, does no more than replace the value of his own confumption during that day, month, or year. At no moment of time, therefore, does he add any thing to the value of the whole annual amount of the rude produce of the land: the portion of that produce which he is continually confuming, being always equal to the value which he is continually producing. The extreme poverty of the greater part of the perfons employed in this expensive, though trifling manufacture, may fatisfy us that the price of their work does not in ordinary cafes exceed the value of their fubfiftence. It is otherwife with the work of farmers and country labourers. The rent of the landlord is a value, which, in ordinary cafes, it is continually producing, over and above replacing, in the most compleat manner, the whole confumption, the whole expence laid out upon the employment and maintenance both of the workmen and of their employer.

ARTIFICERS, manufacturers and merchants, can augment the revenue and wealth of their fociety, by parfimony only; or, as it is expressed in this fystem, by privation, that is, by depriving themselves of a part of the funds destined for their own subsistence. They annually reproduce nothing but those funds. Unless, therefore, they annually fave some part of them, unless they annually deprive themselves of the enjoyment of some part of them, the revenue and wealth of their society can never be in the smalless degree augmented by means of their industry. Farmers and country labourers, on the Vol. II. M m 265

CHAP. VIII.

BOOK

contrary, may enjoy compleatly the whole funds deftined for their own fubfiftence, and yet augment at the fame time the revenue and wealth of their fociety. Over and above what is deflined for their own fubfistence, their industry annually affords a neat produce, of which the augmentation neceffarily augments the revenue and wealth of their fociety. Nations, therefore, which, like France or England, confift in a great measure of proprietors and cultivators; can be enriched by industry and enjoyment. Nations, on the contrary, which, like Holland and Hamburgh, are composed chiefly of merchants, artificers and manufacturers, can grow rich only through parfimony and privation. As the interest of nations fo differently. circumstanced, is very different, fo is likewise the common character of the people. In those of the former kind, liberality, frankness, and good fellowship, naturally make a part of that common character. In the latter, narrowness, meanness, and a selfish disposition, averse to all focial pleafure and enjoyment,

THE unproductive class, that of merchants, artificers, and manufacturers, is maintained and employed altogether at the expence of the two other classes, of that of proprietors, and of. that of cultivators. They furnish it both with the materials of its work and with the fund of its fubfiftence, with the corn and cattle which it confumes while it is employed about that work. The proprietors and cultivators finally pay both the wages of all the workmen of the unproductive class, and the profits of all their employers. Those workmen and their employers are properly the fervants of the proprietors and cultivators. They are only fervants who work without doors, as menial fervants work within. Both the one and the other; however, are equally maintained at the expence of the fame mafters: The labour of both is equally unproductive. It adds nothing to the value of the fum total of the rude produce of the land. Inftead of increasing the value of that fum total, it is a charge and expence which must be paid out of it.

THE unproductive class, however, is not only useful, but greatly useful to the other two classes. By means of the industry of merchants, artificers and manufacturers, the proprietors and cultivators can purchase, both the foreign goods and the manufactured produce of their own country which they have occasion for, with the produce of a much fmaller quantity of their own labour, than what they would be obliged to employ, if they were to attempt, in an aukward and unfkilful manner, either to import the one, or to make the other for their own use. By means of the unproductive class, the cultivators are delivered from many cares which would otherwife diffract their attention from the cultivation of land. The fuperiority of produce. which, in confequence of this undivided attention, they are enabled to raife, is fully fufficient to pay the whole expence which the maintenance and employment of the unproductive class costs either the proprietors, or themfelves. The industry of merchants, artificers, and manufacturers, though in its own nature altogether unproductive, yet contributes in this manner indirectly to increase the produce of the land. It increases the productive powers of productive labour, by leaving it at liberty to confine itfelf to its proper employment, the cultivation of land; and the plough goes frequently the eafier and the better by means of the labour of the man whole bulinels is most remote from the plough."

It can never be the intereft of the proprietors and cultivators to reftrain or to difcourage in any refpect the induftry of merchants, artificers and manufacturers. The greater the liberty which this unproductive clafs enjoys, the greater will be the competition in all the different trades which compose it, and the cheaper will the other two claffes be fupplied, both with foreign goods and with the manufactured produce of their own country.

It can never be the interest of the unproductive class to opprefs the other two classes. It is the furplus produce of the land, or M m 2 what CHAP.

воок

IV.

268

what remains after deducting the maintenance, firft, of the cultivators, and afterwards, of the proprietors, that maintains and employs the unproductive clafs. The greater this furplus, the greater muft likewife be the maintenance and employment of that clafs. The eftabliftiment of perfect juffice, of perfect liberty, and of perfect equality, is the very fimple fecret which moft effectually fecures the higheft degree of profperity to all the three claffes.

THE merchants, artificers, and manufacturers of those mercantile flates which, like Holland and Hamburgh, confist chiefly of this unproductive class, are in the same manner maintained and employed altogether at the expence of the proprietors and cultivators of land. The only difference is, that those proprietors and cultivators are, the greater part of them, placed at a most inconvenient distance from the merchants, artificers, and manufacturers whom they supply with the materials of their work and the fund of their substitutes, are the inhabitants of other countries, and the substitutes of other governments.

SUCH mercantile flates, however, are not only useful, but greatly useful to the inhabitants of those other countries. They fill up, in fome measure, a very important void, and supply the place of the merchants, artificers and manufacturers, whom the inhabitants of those countries ought to find at home, but whom, from some defect in their policy, they do not find at home.

It can never be the intereft of those landed nations, if I may call them fo, to discourage or distress the industry of such mercantile states, by imposing high duties upon their trade, or upon the commodities which they furnish. Such duties, by rendering those commodities dearer, could ferve only to fink the real value of the furplus produce of their own land, with which, or, what comes to the fame thing, with the price of which those commodities are

0

purchased.

purchased. Such duties could ferve only to difcourage the increase C H A P. of that furplus produce, and confequently the improvement and cultivation of their own land. The most effectual expedient, on the contrary, for raifing the value of that furplus produce, for encouraging its increase, and confequently the improvement and cultivation of their own land, would be to allow the most perfect freedom to the trade of all fuch mercantile nations.

This perfect freedom of trade would even be the most effectual expedient for fupplying them, in due time, with all the artificers, manufacturers and merchants, whom they wanted at home, and for filling up in the propereft and moft advantageous manner that very important void which they felt there.

THE continual increase of the furplus produce of their land, would, in due time, create a greater capital than what could be employed with the ordinary rate of profit in the improvement and. cultivation of land; and the furplus part of it would naturally turn itfelf to the employment of artificers and manufacturers at home. But those artificers and manufacturers, finding at home, both the materials of their work and the fund of their fublistence, might immediately, even with much lefs art and fkill, be able to work as cheap as the like artificers and manufacturers of fuch mercantile flates, who had both to bring from a great diftance. Even thoughfrom want of art and skill, they might not for some time be able to work as cheap, yet, finding a market at home, they might be able to fell their work there as cheap as that of the artificers and. manufacturers of fuch mercantile states, which could not be brought to that market but from fo great a diftance; and as their art and skill improved, they would foon be able to fell it cheaper. The artificers and manufacturers of fuch mercantile states, therefore, would immediately be rivalled in the market of those landed nations, and foon after underfold and justled out of it altogether. The cheapnefs 1

VIII.

cheapnefs of the manufactures of those landed nations, in confequence of the gradual improvements of art and skill, would, in due time, extend their fale beyond the home market, and carry them to many foreign markets, from which they would in the same manner gradually justle out many of the manufactures of such mercantile nations.

THIS continual increase both of the rude and manufactured produce of those landed nations would in due time create a greater capital than could, with the ordinary rate of profit, be employed either in agriculture or in manufactures. The furplus of this capital would naturally turn itfelf to foreign trade, and be employed in exporting, to foreign countries, fuch parts of the rude and manufactured produce of its own country, as exceeded the demand of the home market. In the exportation of the produce of their own country, the merchants of a landed nation would have an advantage of the fame kind over those of mercantile nations, which its artificers and manufacturers had over the artificers and manufacturers of fuch nations; the advantage of finding at home that cargo, and those flores and provisions, which the others were obliged to feek for at a diftance. With inferior art and skill in navigation, therefore, they would be able to fell that cargo as cheap in foreign markets as the merchants of fuch mercantile nations; and with equal art and skill they would be able to fell it cheaper. They would foon, therefore, rival those mercantile nations in this branch of foreign trade, and in due time would justle them out of it altogether.

ACCORDING to this liberal and generous fyftem, therefore, the moftadvantageous method in which a landed nation can raife up artificers, manufacturers and merchants of its own, is to grant the moft perfect freedom of trade to the artificers, manufacturers and merchants of all other nations. It thereby raifes the value of the furplus produce

270

BOOK

produce of its own land, of which the continual increase gradually C H A P. establishes a fund which in due time necessarily raises up all the artificers, manufacturers and merchants whom it has occasion for.

WHEN a landed nation, on the contrary, oppreffes either by high duties or by prohibitions the trade of foreign nations, it neceffarily hurts its own interest in two different ways. First, by raising the price of all foreign goods and of all forts of manufactures, it neceffarily finks the real value of the furplus produce of its own land, with which, or, what comes to the fame thing, with the price of which it purchases those foreign goods and manufactures. Secondly, by giving a fort of monopoly of the home market to its own merchants, artificers and manufacturers, it raifes the rate of mercantile and. manufacturing profit in proportion to that of agricultural profit, and confequently either draws from agriculture a part of the capital which had before been employed in it, or hinders from going to it a part of what would otherwife have gone to it. This policy, therefore, discourages agriculture in two different ways; first, by finking the real value of its produce, and thereby lowering the rate of its profit; and, fecondly, by raifing the rate of profit in all other employments. Agriculture is rendered lefs advantageous, and trade and manufactures more advantageous than they otherwife would be; and every man is tempted by his own intereft to turn, as much. as he can, both his capital and his industry from the former to the: latter employments.

THOUGH, by this opprefive policy, a landed nation fhould be. able to raife up artificers, manufacturers and merchants, of its own,, fomewhat fooner than it could do by the freedom of trade; a. matter, however, which is not a little doubtful; yet it would raife. them up, if one may fay fo, prematurely, and before it was perfectly. ripe for them. By raifing up too haftily one fpecies of induftry, it. would

BOOK

272

would depress another more valuable species of industry. By raising up too hastily a species of industry which only replaces the stock which employs it, together with the ordinary profit, it would depress a species of industry which, over and above replacing that stock with its profit, affords likewise a neat produce, a free rent to the landlord. It would depress productive labour, by encouraging too hastily that labour which is altogether barren and unproductive.

In what manner, according to this fyftem, the fum total of the annual produce of the land is diffributed among the three claffes abovementioned, and in what manner the labour of the unproductive class, does no more than replace the value of its own confumption, without increasing in any respect the value of that fum total, is reprefented by Mr. Quefnai, the very ingenious and profound author of this fystem, in some arithmetical formularies. The first of these formularies, which by way of eminence he peculiarly diffinguishes by the name of the Oeconomical Table, represents the manner in which he fupposes this diffribution takes place, in a state of the most perfect liberty, and therefore of the higheft prosperity; in a flate where the annual produce is fuch as to afford the greatest possible neat produce, and where each class enjoys its proper share of the whole annual produce. Some subsequent formularies reprefent the manner in which, he fupposes, this distribution is made in different states of restraint and regulation; in which, either the class of proprietors, or the barren and unproductive class, is more favoured than the class of cultivators, and in which, either the one, or the other encroaches more or lefs upon the fhare which ought properly to belong to this productive class. Every fuch encroachment, every violation of that natural diffribution, which the most perfect liberty would establish, must, according to this fystem, neceffarily degrade more or lefs, from one year to another, the value and fum total of the annual produce, and must necessarily occasion

a gra-

a gradual declention in the real wealth and revenue of the fociety; C H a declention of which the progrefs muft be quicker or flower, according to the degree of this encroachment, according as that natural diffribution, which the most perfect liberty would establish, is more or lefs violated. Those fubscquent formularies represent the different degrees of declention, which, according to this fystem correspond to the different degrees in which this natural distribution of things is violated.

SOME speculative physicians feem to have imagined that the health of the human body could be preferved only by a certain precife regimen of diet and exercife, of which every, the smallest, violation neceffarily occafioned fome degree of difeafe or diforder proportioned to the degree of the violation. Experience, however, would feem to flow that the human body frequently preferves, to all appearance at leaft, the most perfect state of health under a vast variety of different regimens; even under some which are generally believed to be very far from being perfectly wholefome. But the healthful flate of the human body, it would feem, contains in itself fome unknown principle of prefervation, capable either of preventing or of correcting, in many respects, the bad effects even of a very faulty regimen. Mr. Quefnai, who was himfelf a physician, and a very fpeculative phyfician, fccms to have entertained a notion of the fame kind concerning the political body, and to have imagined that it would thrive and profper only under a certain precise regimen, the exact regimen of perfect liberty and perfect juffice. He feems not to have confidered that in the political body, the natural effort which every man is continually making to better his own condition, is a principle of prefervation capable of preventing and correcting, in many respects, the bad effects of a political occonomy, in some degree, both partial and oppressive. Such a political oeconomy, though it no doubt retards more or lefs, VOL. II. Nn is

273 С Н А Р.

274 воок IV.

is not always capable of ftopping altogether the natural progrefs of a nation towards wealth and profperity, and ftill lefs of making it go backwards. If a nation could not profper without the enjoyment of perfect liberty and perfect juftice, there is not in the world a nation which could ever have profpered. In the political body, however, the wifdom of nature has fortunately made ample provision for remedying many of the bad effects of the folly and injuffice of man; in the fame manner as it has done in the natural body, for remedying those of his floth and intemperance.

THE capital error of this fyftem, however, feems to lie in its reprefenting the clafs of artificers, manufacturers, and merchants, as altogether barren and unproductive. The following observations may ferve to show the impropriety of this representation.

FIRST, this class, it is acknowledged, reproduces annually the value of its own annual confumption, and continues, at leaft, the existence of the stock or capital which maintains and employs it. But upon this account alone the denomination of barren or unproductive should feem to be very improperly applied to it. We should not call a marriage barren or unproductive, though it produced only a fon and a daughter, to replace the father and mother, and though it did not increase the number of the human species, but only continued it as it was before. Farmers and country labourers, indeed, over and above the flock which maintains and employs them, reproduce annually a neat produce, a free rent to the landlord. As a marriage which affords three children is certainly more productive than one which affords only two; fo the labour of farmers and country labourers is certainly more productive than that of merchants, artificers, and manufacturers. The fupe-8 TIOT

rior produce of the one clafs, however, does not render the other C H A P. barren or unproductive.

SECONDLY, it feems, upon this account, altogether improper to confider artificers, manufacturers, and merchants, in the fame light as menial fervants. The labour of menial fervants does not continue the existence of the fund which maintains and employs them. Their maintenance and employment is altogether at the expence of their masters, and the work which they perform is not of a nature to repay that expence. That work confifts in fervices which perifh generally in the very inftant of their performance, and does not fix or realize itself in any vendible commodity which can replace the value of their wages and maintenance. The labour, on the contrary, of artificers, manufacturers and merchants, naturally does fix and realize itfelf in fome fuch vendible commodity. It is upon this account that, in the chapter in which I treat of productive and unproductive labour. I have claffed artificers, manufacturers, and merchants, among the productive labourers, and menial fervants among the barren or unproductive.

THIRDLY, it feems, upon every fuppolition, improper to fay, that the labour of artificers, manufacturers, and merchants, does not increafe the real revenue of the fociety. Though we fhould fuppofe, for example, as it feems to be fuppofed in this fyftem, that the value of the daily, monthly, and yearly confumption of this clafs was exactly equal to that of its daily, monthly, and yearly production, yet it would not from thence follow that its labour added nothing to the real revenue, to the real value of the annual produce of the land and labour of the fociety. An artificer, for example, who in the firft fix months after harveft, executes ten pounds worth of work, though he fhould in the fame time confume ten pounds worth of corn and other neceffaries, yet really adds the value of ten pounds to the N n 2 annual

annual produce of the land and labour of the fociety. While he has been confuming a half yearly revenue of ten pounds worth of corn and other necessaries, he has produced an equal value of work capable of purchasing, either to himfelf or to some other person, an equal half yearly revenue. The value, therefore, of what has been confumed and produced during these fix months is equal, not to ten, but to twenty pounds. It is poffible, indeed, that no more than ten pounds worth of this value, may ever have existed at any one moment of time. But if the ten pounds worth of corn and other neceffaries, which were confumed by the artificer, had been confumed by a foldier or by a menial fervant, the value of that part of the annual produce which exifted at the end of the fix months, would have been ten pounds lefs than it actually is in confequence of the labour of the artificer. Though the value of what the artificer produces, therefore, fhould not at any one moment of time be fupposed greater than the value he confumes, yet at every moment of time the actually exifting value of goods in the market is, in confequence of what he produces, greater than it otherwife would be.

WHEN the patrons of this fyftem affert that the confumption of artificers, manufacturers, and merchants, is equal to the value of what they produce, they probably mean no more than that their revenue, or the fund defined for their confumption, is equal to it. But if they had expressed themselves more accurately, and only afferted that the revenue of this class was equal to the value of what they produced, it might readily have occurred to the reader that what would naturally be faved out of this revenue, must neceffarily increase more or less the real wealth of the fociety. In order, therefore, to make out fomething like an argument, it was neceffary that they should express themselves as they have done; and this argument, even supposing things actually were as it feems to presume them to be, turns out to be a very inconclusive one.

FOURTHLY

276

BOOK

FOURTHLY, farmers and country labourers can no more augment, without parfimony, the real revenue, the annual produce of the land and labour of their fociety, than artificers, manufacturers, and merchants. The annual produce of the land and labour of any fociety can be augmented only in two ways; either, first, by fome improvement in the productive powers of the useful labour actually maintained within it; or, fecondly, by fome increase in the quantity of that labour.

THE improvement in the productive powers of ufeful labour depend, first, upon the improvement in the ability of the workman; and, fecondly, upon that of the machinery with which he works. But the labour of artificers and manufacturers, as it is capable of being more fubdivided and the labour of each workman reduced to a greater fimplicity of operation, than that of farmers and country labourers, fo it is likewife capable of both these forts of improvement in a much higher degree. \* In this respect, therefore, the class of cultivators can have no fort of advantage over that of artificersand manufacturers.

THE increase in the quantity of useful labour actually employed within any fociety, must depend altogether upon the increase of the capital which employs it; and the increase of thiat capital again must be exactly equal to the amount of the favings from the revenue, either of the particular perfons who manage and direct the employment of that capital, or of fome other perfons who lend it to them. If merchants, artificers and manufacturers are, as this fystem feemsto suppose, naturally more inclined to parsimony and faving thanproprietors and cultivators, they are, so far, more likely to aug-

\* See Book I. Chap. I.

ment

IV.

ment the quantity of useful labour employed within their fociety, BOOK and confequently to increase its real revenue, the annual produce of its land and labour.

> FIFTHLY and laftly, though the revenue of the inhabitants of every country was supposed to confist altogether, as this system seems to fuppofe, in the quantity of fubfiftence which their industry could procure to them; yet, even upon this fuppofition, the revenue of a trading and manufacturing country must, other things being equal, always be much greater than that of one without trade or manufactures. By means of trade and manufactures, a greater quantity of subfiftence can be annually imported into a particular country than what its own lands, in the actual flate of their cultivation, could afford. The inhabitants of a town, though they frequently poffess no lands of their own, yet draw to themselves by their industry fuch a quantity of the rude produce of the lands of other people as fupplies them, not only with the materials of their work, but with the fund of their fubfistence. What a town always is with regard to the country in its neighbourhood, one independent flate or country may frequently be with regard to other independent states or countries. It is thus that Holland draws a great part of its sublissence from other countries; live cattle from Holftein and Jutland, and corn from almost all the different countries of Europe. A small quantity of manufactured produce purchafes a great quantity of rude produce. A trading and manufacturing country, therefore, naturally purchases with a small part of its manufactured produce a great part of the rude produce of other counaries; while, on the contrary, a country without trade and manufactures is generally obliged to purchase, at the expence of a great part of its rude produce, a very fmall part of the manufactured produce of other countries. The one exports what can fubfift and accommodate but a very few, and imports the fubfiftence and accommodation of a great number. The other exports the accommodation and

and fubfiftence of a great number, and imports that of a very few only. C H A P. The inhabitants of the one muft always enjoy a much greater quantity of fubfiftence than what their own lands, in the actual flate of their cultivation, could afford. The inhabitants of the other muft always enjoy a much finaller quantity.

THIS fystem, however, with all its imperfections is, perhaps the nearest approximation to the truth that has yet been published upon the fubject of political oeconomy, and is upon that account well. worth the confideration of every man who wifhes to examine with attention the principles of that very important fcience. Though in reprefenting the labour which is employed upon land as the only productive labour, the notions which it inculcates are perhaps too narrow and confined; yet in reprefenting the wealth of nations asconfifting, not in the unconfumable riches of money, but in the confumable goods annually reproduced by the labour of the fociety; and in reprefenting perfect liberty as the only effectual expedient for rendering this annual reproduction the greatest possible, its doctrinefeems to be in every respect as just as it is generous and liberal. Itsfollowers are very numerous; and as men are fond of paradoxes, and of appearing to understand what furpasses the comprehension of ordinary people, the paradox which it maintains, concerning the unproductive nature of manufacturing labour, has not perhaps contributed a little to increase the number of its admirers. They have for fome years past made a pretty confiderable fect, diftinguished in the French republick of letters by the name of, The Oeconomifis. Their works have certainly been of fome fervice to their country; not only by bringing into general difcuffion, many fubjects which. had never been well examined before, but by influencing in fome measure the publick administration in favour of agriculture. It has been in confequence of their reprefentations, accordingly, that the agriculture of France has been delivered from feveral of the oppref

oppressions which it before laboured under. The term during which fuch a leafe can be granted, as will be valid against every future purchafer or proprietor of the land, has been prolonged from nine to twenty-feven years. The antient provincial reftraints upon the transportation of corn from one province of the kingdom to another, have been entirely taken away, and the liberty of exporting it to all foreign countries, has been eftablished as the common law of the kingdom in all ordinary cafes. This fect, in their works which are very numerous, and which treat not only of what is properly called Political Oeconomy, or of the nature and caufes of the wealth of nations, but of every other branch of the fystem of civil government, all follow implicitly, and without any fensible variation, the doctrine of Mr. Quesnai. There is upon this account little variety in the greater part of their works. The most diffinct and best connected account of this doctrine is to be found in a little book written by Mr. Mercier de la Riviere, fometime Intendant of Martinico, intitled, The natural and effential Order of Political Societies. The admiration of this whole fect for their master, who was himself a man of the greatest modesty and fimplicity, is not inferior to that of any of the antient philosophers for the founders of their respective fystems. " There have been, " fince the world began," fays a very diligent and refpectable author. the Marquis de Mirabeau, "three great inventions which have princi-" pally given stability to political focieties, independent of many " other inventions which have enriched and adorned them. The first " is the invention of writing, which alone gives human nature the " power of transmitting without alteration, its laws, its contracts, its " annals, and its difcoveries. The fecond, is the invention of money, " which binds together all the relations between civilized focieties. " The third, is the Oeconomical Table, the refult of the other two, " which completes them both by perfecting their object; the great " difcovery of our age, but of which our posterity will reap the benefit."

As

280

BOOK

As the political oeconomy of the nations of modern Europe, has been more favourable to manufactures and foreign trade, the industry of the towns, than to agriculture, the industry of the country; fo that of other nations has followed a different plan, and has been more favourable to agriculture than to manufactures and foreign trade.

THE policy of China favours agriculture more than all other employments. In China, the condition of a labourer is faid to be as much fuperior to that of an artificer; as in most parts of Europe, that of an artificer is to that of a labourer. In China, the great ambition of every man is to get poffeffion of fome little bit of land, either in property or in leafe; and leafes are there faid to be granted upon very moderate terms, and to be fufficiently fecured to the leffees. The Chinese have little respect for foreign trade. Your beggarly commerce! was the language in which the Mandarins of Pekin uled to talk to Mr. De Lange, the Ruffian envoy, concerning it \*. Except with Japan, the Chinefe carry on, themfelves and in their own bottoms, little or no foreign trade; and it is only into one or two ports of their kingdom that they even admit the ships of foreign nations. Foreign trade, therefore, is, in China, every way confined within a much narrower circle than that to which it would naturally extend itfelf, if more freedom was allowed to it, either in their own fhips, or in thole of foreign nations.

MANUFACTURES, as in a finall bulk they frequently contain a great value, and can upon that account be transported at lefs expence from one country to another than most parts of rude produce, are, in almost all countries, the principal support of foreign trade. In countries, besides, less extensive and less favourably circumflanced for interior commerce than China, they generally require

\* See the Journal of Mr. De Lange in Bell's Travels, vol. ii. p. 258. 276. and 293. Vol. II, O o the 28 t

CHAP.

282

BOOK

the fupport of foreign trade. Without an extensive foreign market they could not well flourish, either in countries fo moderately extenfive as to afford but a narrow home market; or in countries where the communication between one province and another was fo difficult. as to render it impossible for the goods of any particular place to enjoy the whole of that home market which the country could afford. The perfection of manufacturing industry, it must be remembered, depends altogether upon the division of labour; and the degree to which the division of labour can be introduced into any manufacture, is neceffarily regulated, it has already been shown, by the extent of the market. But the great extent of the empire of China, the vaft multitude of its inhabitants, the variety of climate, and confequently of productions in its different provinces, and the eafy communication by means of water carriage between the greater part of them, render the home market of that country of fo great extent, as to be alone fufficient to fupport very great manufactures, and to admit of very confiderable fubdivisions of labour.' The home market of China is perhaps, in extent, not much inferior to the market of all the different countries of Europe put together. A more extensive foreign trade, however, which to this great home market added the foreign market of all the reft of the world; especially if any confiderable part of this trade was carried on in Chinese fhips; could fcarce fail to increase very much the manufactures of China, and to improve very much the productive powers of its manufacturing industry. By a more extensive navigation, the Chinese would naturally learn the art of using and constructing themselves all the different machines made use of in other countries, as well as the other improvements of art and industry which are practifed in all the different parts of the world. Upon their present plan they have little opportunity of improving themfelves by the example of any other nation ; except that of the Japanefe.

THE

THE policy of ancient Egypt too, and that of the Gentoo government of Indostan, feem to have favoured agriculture more than all other employments.

BOTH in ancient Egypt and Indoftan, the whole body of the people was divided into different cafts or tribes, each of which was confined, from father to fon, to a particular employment or clafs of employments. The fon of a prieft was neceffarily a prieft; the fon of a foldier, a foldier; the fon of a labourer, a labourer; the fon of a weaver, a weaver; the fon of a taylor, a taylor; &c. In both countries, the caft of the priefts held the higheft rank, and that of the foldiers the next; and in both countries, the caft of the farmers and labourers was fuperior to the cafts of merchants and manufacturers.

THE government of both countries was particularly attentive to the intereft of agriculture. The works conftructed by the ancient fovereigns of Egypt for the proper diffribution of the waters of the Nile were famous in antiquity; and the ruined remains of fome of them are full the admiration of travellers. Those of the fame kind which were conftructed by the antient fovereigns of Indostan, for the proper diffribution of the waters of the Ganges as well as of many other rivers, though they have been less celebrated, feem to have been equally great. Both countries accordingly, though subject occasionally to dearths, have been famous for their great fertility. Though both were extremely populous, yet, in years of moderate plenty, they were both able to export great quantities of grain to their neighbours.

The antient Egyptians had a fuperfittious averfion to the fea; and as the Gentoo religion does not permit its followers to light a fire, nor confequently to drefs any victuals upon the water, it in  $O \circ 2$  effect 283 ]

effect prohibits them from all diftant sea voyages. Both the Egyptians BOOK and Indians must have depended almost altogether upon the navigation of other nations for the exportation of their furplus produce; and this dependency, as it must have confined the market, fo it must have difcouraged the increase of this furplus produce. It must have discouraged too the increase of the manufactured produce more than that of the rude produce. Manufactures require a much more extensive market than the most important parts of the rude produce of the land. A fingle shoemaker will make more than three hundred pairs of thoes in the year; and his own family will not perhaps wear out fix pairs. Unless therefore he has the custom of at least fifty fuch families as his own, he cannot dispose of the whole produce of his own labour. The most numerous class of artificers will feldom, in a large country, make more than one in fifty or one in a hundred of the whole number of families contained in it. But in fuch large countries as France and England, the number of people employed in agriculture has by fome authors been computed at a half, by others at a third, and by no author that I know of, at lefs than a fifth of the whole inhabitants of the country. But as the produce of the agriculture of both France and England is, the far greater part of it, confumed at home, each perfon employed in it must, according to these computations, require little more than the cuftom of one, two, or, at most, of four fuch families as his own, in order to difpofe of the whole produce of his own labour. Agriculture, therefore, can support itself under the discouragement of a confined market, much better than manufactures. In both antient Egypt and Indostan, indeed, the confinement of the foreign market was in fome measure compensated by the conveniency of many inland navigations, which opened, in the most advantageous manner, the whole extent of the home market to every part of the produce of every different diffrict of those countries. The great extent of Indostan too rendered the home market of that country

284

& many many and

country very great, and fufficient to fupport a great variety of manufactures. But the fmall extent of antient Egypt, which was never equal to England, must at all times have rendered the home market of that country too narrow for fupporting any great variety of manufactures. Bengal, accordingly, the province of Indostan which commonly exports the greatest quantity of rice, has always been more remarkable for the exportation of a great variety of manufactures, than for that of its grain. Antient Egypt, on the contrary, though it exported fome manufactures, fine linen in particular, as well as fome other goods, was always most diffinguished for its great exportation of grain. It was long the granary of the Roman empire.

THE fovereigns of China, of antient Egypt, and of the different kingdoms into which Indoftan has at different times been divided, have always derived the whole, or by far the moft confiderable part, of their revenue from fome fort of land-tax or land-rent. This landtax or land-rent, like the tithe in Europe, confifted in a certain proportion, a fifth, it is faid, of the produce of the land, which was either delivered in kind or paid in money, according to a certain valuation, and which therefore varied from year to year according to all the variations of the produce. It was natural, therefore, that the fovereigns of those countries should be particularly attentive to the interests of agriculture, upon the prosperity or declension of which immediately depended the yearly increase or diminution of their own revenue.

THE policy of the antient republicks of Greece, and that of Rome, though it honoured agriculture more than manufactures or foreign trade, yet feems rather to have difcouraged the latter employments, than to have given any direct or intentional encouragement to the former. In feveral of the antient ftates of Greece, foreign trade was prohibited altogether; and in feveral others the employments,

BOOK

ments of artificers and manufacturers were confidered as hurtful to the ftrength and agility of the human body, as rendering it incapable of those habits which their military and gymnastic exercises endeavoured to form in it, and as thereby difqualifying it more or lefs for undergoing the fatigues and encountering the dangers of war. Such occupations were confidered as fit only for flaves, and the free citizens of the flate were prohibited from exercifing them. Even in those states where no fuch prohibition took place, as in Rome. and Athens, the great body of the people were in effect excluded from all the trades which are now commonly exercifed by the lower fort of the inhabitants of towns. Such trades were, at Athens and Rome, all occupied by the flaves of the rich, who exercifed them for the benefit of their masters, whose wealth, power, and protection, made it almost impossible for a poor freeman to find a market for his work, when it came into competition with that of the flaves of the rich. Slaves, however, are very feldom inventive; and all the most important improvements, either in machinery, or in the arrangement and diffribution of work which facilitate and abridge labour, have been the difcoveries of freemen. Should a flave propofe any improvement of this kind, his mafter would be very apt to confider the propofal as the fuggestion of laziness, and a defire to fave his own labour at the master's expence. The poor flave, instead of reward, would probably meet with much abufe, perhaps with fome punifhment. In the manufactures carried on by flaves, therefore, more labour must generally have been employed to execute the fame quantity of work, than in those carried on by freemen. The work of the former must, upon that account, generally have been dearer than that of the latter. The Hungarian mines, it is remarked by Mr. Montesquieu, though not richer, have always been wrought with lefs expence, and therefore with more profit, than the Turkifh mines in their neighbourhood. The Turkish mines are wrought by flaves; and the arms of those flaves are the only machines which the Turks have ever thought of employing. The Hungarian 9 mines.

mines are wrought by freemen, who employ a great deal of machinery, by which they facilitate and abridge their own labour. From the very little that is known about the price of manufactures in the times of the Greeks and Romans, it would appear that those of the finer fort were exceffively dear. Silk fold for its weight in gold. It was not, indeed, in those times a European manufacture; and as it was all brought from the East Indies, the distance of the carriage may in fome meafure account for the greatness of the price. The price, however, which a lady, it is faid, would fometimes pay for a piece of very fine linen, feems to have been equally extravagant; and as linen was always either a European, or, at fartheft, an Egyptian manufacture, this high price can be accounted for only by the great expence of the labour which must have been employed about it, and the expence of this labour again could arife from nothing but the aukwardnefs of the machinery which it made use of. The price of fine woollens too, though not quite fo extravagant, feems however to have been much above that of the prefent times. Some cloths, we are told by Pliny, dyed in a particular manner, coft a hundred denarii, or three pounds fix fhillings and eight pence, the pound weight \*. Others dyed in another manner coft a thousand denarii the pound weight, or thirty-three pound fix shillings and eight pence. The Roman pound, it must be remembered, contained only twelve of our avoirdupois ounces. This high price, indeed, feems to have been principally owing to the dye. But had not the cloths themfelves been much dearer than any which are made in the prefent times, fo very expensive a dye would not probably have been bestowed upon them. The disproportion would have been too great between the value of the acceffory and that of the principal. The price mentioned by the fame author + of some Triclinaria, a fort of woollen pillows or cushions made use of to lean upon as they reclined upon their couches at table, paffes all credibility; fome of them being faid to have coft more than thirty thousand, others more than three hundred thou-

+ Plin. l. viii. c. 48.

fand

C H A P. VIII.

**BOOK** fand pounds. This high price too is not faid to have arifen from the dye. In the drefs of the people of fafhion of both fexes, there feems to have been much lefs variety, it is obferved by Doctor Arbuthnot, in antient than in modern times; and the very little variety which we find in that of the antient flatues confirms his obfervation. He infers from this, that their drefs muft upon the whole have been cheaper than ours: but the conclution does not feem to follow. When the expence of fathionable drefs is very great, the variety muft be very fmall. But when, by the improvements in the productive powers of manufacturing art and induftry, the expence of any one drefs comes to be very moderate, the variety will naturally be very great. The rich not being able to diffinguift themfelves by the expence of any one drefs, will naturally endeavour to do fo by the multitude and variety of their dreffes.

THE greatest and most important branch of the commerce of every nation, it has already been observed, is that which is carried on between the inhabitants of the town and those of the country. The inhabitants of the town draw from the country the rude produce which conftitutes both the materials of their work and the fund of their fubfistence; and they pay for this rude produce by fending back to the country a certain portion of it manufactured and prepared for immediate use. The trade which is carried on between these two different sets of people confists ultimately in a certain quantity of rude produce exchanged for a certain quantity of manufactured produce. The dearer the latter, therefore, the cheaper the former; and whatever tends in any country to raife the price of manufactured produce, tends to lower that of the rude produce of the land, and thereby to difcourage agriculture. The fmaller the quantity of manufactured produce which any given quantity of rude produce, or, what comes to the fame thing, which the price of any given quantity of rude produce is capable of purchasing, the smaller the exchangeable value of that given quantity

.288

quantity of rude produce; the finaller encouragement which either the landlord has to increafe its quantity by improving, or the farmer by cultivating the land. Whatever, befides, tends to diminish in any country the number of artificers and manufacturers, tends to diminish the home market, the most important of all markets for the rude produce of the land, and thereby ftill further to difcourage agriculture.

THOSE fystems, therefore, which preferring agriculture to all other employments, in order to promote it, impose reftraints upon manufactures and foreign trade, act contrary to the very end which they propose, and indirectly discourage that very species of industry which they mean to promote. They are so far, perhaps, more inconfistent than even the mercantile system. That system, by encouraging manufactures and foreign trade more than agriculture, turns a certain portion of the capital of the society from supporting a more advantageous, to support a less advantageous species of industry. But still it really and in the end encourages that species of industry which it means to promote. Those agricultural systems, on the contrary, really and in the end discourage their own favourite species of industry.

It is thus that every fyftem which endeavours, either, by extraordinary encouragements, to draw towards a particular species of industry a greater share of the capital of the fociety than what would naturally go to it; or, by extraordinary reftraints, to force from a particular species of industry some share of the capital which would otherwise be employed in it; is in reality subversive of the great purpose which it means to promote. It retards, instead of accelerating, the progress of the fociety towards real wealth and greatness; and diminishes, instead of increasing, the real value of the annualproduce of its land and labour.

VOL. II.

P p

ALL

ALL systems either of preference or of restraint, therefore, being thus completely taken away, the obvious and fimple fyftem of natural liberty establishes itself of its own accord. Every man, as long as he does not violate the laws of justice, is left perfectly free to purfue his own interest his own way, and to bring both his industry and capital into competition with those of any other man or order of men. The fovereign is completely difcharged from a duty, in the attempting to perform which he must always be exposed to innumerable delusions, and for the proper performance of which no human wildom or knowledge could ever be fufficient; the duty of fuper-intending the industry of private people, and of directing it towards the employments most fuitable to the interest of the fociety. According to the fystem of natural liberty, the fovereign has only three duties to attend to; three duties of great importance, indeed, but plain and intelligible to common understandings: first, the duty of protecting the fociety from the violence and invasion of other independent focieties; fecondly, the duty of protecting, as far as poffible, every member of the fociety from the injuffice or oppression of every other member of it, or the duty of establishing an exact administration of justice; and, thirdly, the duty of erecting and maintaining certain publick works and certain publick inftitutions, which it can never be for the interest of any individual, or fmall number of individuals, to erect and maintain; because the profit could never repay the expence to any individual or fmall number of individuals, though it may frequently do much more than repay it to a great fociety.

THE proper performance of those feveral duties of the fovereign neceflarily fuppoles a certain expence; and this expence again neceflarily requires a certain revenue to fupport it. In the following book, therefore, I fhall endeavour to explain; first, what are the neceflary expences of the fovereign or common-wealth; and which

of

290

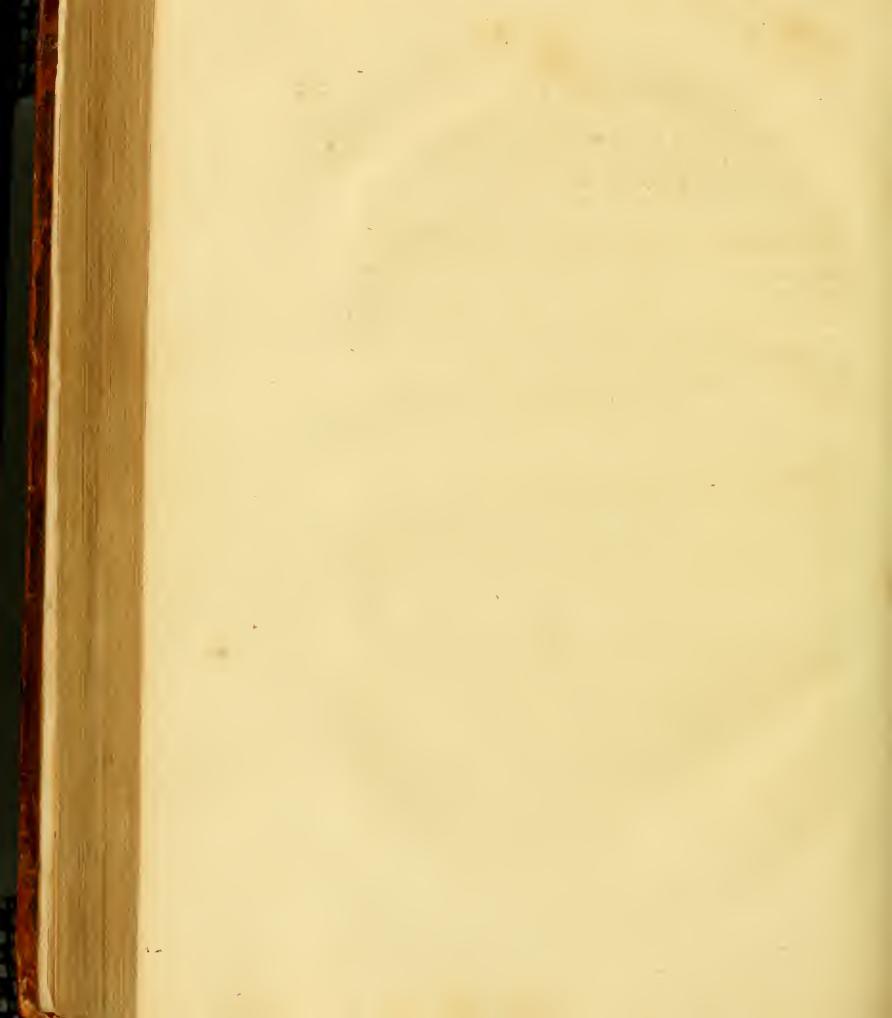

BOOK

IV.

of those expences ought to be defrayed by the general contribution of the whole fociety; and which of them, by that of fome particular part only, or of fome particular members of the fociety: fecondly, what are the different methods in which the whole fociety may be made to contribute towards defraying the expences incumbent on the whole fociety, and what are the principal advantages and inconveniences of each of those methods: and, thirdly, what are the reasons and causes which have induced almost all modern governments to mortgage fome part of this revenue, or to contract debts, and what have been the effects of those debts upon the real wealth, the annual produce of the land and labour of the fociety. The following book, therefore, will naturally be divided into three chapters.

# BOOK V.

Of the Revenue of the Sovereign or Commonwealth.

#### CHAP. Т.

Of the Expences of the Sovereign or Commonwealth.

### PART FIRST.

Of the Expence of Defence.

THE first duty of the fovereign, that of protecting the fociety CHAP. from the violence and invafion of other independent focieties, can be performed only by means of a military force. But the expence both of preparing this military force in time of peace, and of employing it in time of war, is very different in the different states of fociety, in the different periods of improvement.

AMONG nations of hunters, the loweft and rudeft flate of fociety, fuch as we find it among the native tribes of North America, every man is a warrior as well as a hunter. When he goes to war, either to defend his fociety, or to revenge the injuries which have been done to it by other focieties, he maintains himfelf by his own labour, in the fame manner as when he lives at home. His fociety, for in this flate of things there is properly neither fovereign nor commonwealth, is at no fort of expence, either to prepare him for the field, or to maintain him while he is in it.

AMONG

AMONG nations of shepherds, a more advanced state of fociety, fuch as we find it among the Tartars and Arabs, every man is, in the fame manner, a warrior. Such nations have commonly no fixed habitation, but live, either in tents, or in a fort of covered waggons which are eafily transported from place to place. The whole tribe or nation changes its fituation according to the different feafons of the year, as well as according to other accidents. When its herds and flocks have confumed the forage of one part of the country, it removes to another, and from that to a third. In the dry feafon, it comes down to the banks of the rivers; in the wet feason it retires to the upper country. When fuch a nation goes to war, the warriors will not truft their herds and flocks to the feeble defence of their old men, their women and children; and their old men, their women and children, will not be left behind without defence and without fubfistence. The whole nation, befides, being accustomed to a wandering life, even in time of peace, eafily takes the field in time of war. Whether it marches as an army, or moves about as a company of herdfmen, the way of life is nearly the fame, though the object proposed by it be very different. They all go to war together, therefore, and every one does as well as he can. Among the Tartars, even the women have been frequently known to engage in battle. If they conquer, whatever belongs to the hoffile tribe is the recompence of the victory. But if they are vanquished, all is loft, and not only their herds and flocks, but their women and children become the booty of the conqueror. Even the greater part of those who furvive the action are obliged to fubmit to him for the fake of immediate fubfistence. The reft are commonly diffipated and difperfed in the defart.

THE ordinary life, the ordinary exercifes of a Tartar or Arab, prepare him fufficiently for war. Running, wreftling, cudgel-playing, throwing the javelin, drawing the bow, &c. are the common 8 paffimes

294

LOOK

paftimes of those who live in the open air, and are all of them the images of war. When a Tartar or Arab actually goes to war, he is maintained, by his own herds and flocks which he carries with him, in the fame manner as in peace. His chief or fovereign, for those nations have all chiefs or fovereigns, is at no fort of expence in preparing him for the field; and when he is in it, the chance of plunder is the only pay which he either expects or requires.

An army of hunters can feldom exceed two or three hundred The precarious fublistence which the chace affords could men. feldom allow a greater number to keep together for any confiderable An army of fhepherds, on the contrary, may fometimes time. amount to two or three hundred thousand. As long as nothing ftops their progrefs, as long as they can go on from one diffrict, of which they have confumed the forage, to another which is yet entire ; there feems to be fcarce any limit to the number who can march on together. A nation of hunters can never be formidable to the civilized nations in their neighbourhood. A nation of fhepherds may. Nothing can be more contemptible than an Indian war in North America. Nothing, on the contrary, can be more dreadful than a Tartar invafion has frequently been in Afia. The judgment of Thucydides, that both Europe and Afia could not refift the Scythians united, has been verified by the experience of all ages. The inhabitants of the extensive, but defenceless plains of Scythia or Tartary, have been frequently united under the dominion of the chief of fome conquering horde or clan; and the havock and devastation of Afia have always fignalized their union. The inhabitants of the inhospitable defarts of Arabia, the other great nation of shepherds, have never been united but once; under Mahomet and his immediate fucceffors. Their union, which was more the effect of religious enthuliafm than of conquest, was fignalized in the fame manner. If the hunting nations of America . fhould

CHAP.

296

BOOK should ever become shepherds, their neighbourhood would be much more dangerous to the European colonies than it is at prefent.

> In a yet more advanced flate of fociety; among those nations of hufbandmen who have little foreign commerce and no other manufactures, but those coarse and household ones which almost every private family prepares for its own ule; every man, in the fame manner, either is a warrior or cafily becomes fuch. They who live by agriculture generally pafs the whole day in the open air, expofed to all the inclemencies of the feafons. The hardinefs of their ordinary life prepares them for the fatigues of war, to fome of which their neceffary occupations bear a great analogy. The neceffary occupation of a ditcher prepares him to work in the trenches, and to fortify a camp as well as to enclose a field. The ordinary pastimes of fuch husbandmen are the fame as those of shepherds, and are in the same manner the images of war. But as husbandmen have less leifure than shepherds, they are not fo frequently employed in those passimes. They are foldiers, but foldiers not quite so much masters of their exercise. Such as they are, however, it feldom cofts the fovereign or commonwealth any expense to prepare them for the field.

AGRICULTURE, even in its rudest and lowest state, supposes a fettlement; fome fort of fixed habitation which cannot be abandoned without great lofs. When a nation of mere hufbandmen, therefore, goes to war, the whole people cannot take the field together. The old men, the women and children, at least, must remain at home to take care of the habitation. All the men of the military age, however, may take the field, and, in finall nations of this kind, have frequently done fo. In every nation the men of the military age are supposed to amount to about a fourth or a fifth part of the whole body of the people. If the campaign too fhould begin after feed time.

time and end before harvest, both the husbandman and his prin-CHAP. cipal labourers can be fpared from the farm without much lofs. He trufts that the work which must be done in the meantime can be well enough executed by the old men, the women and the children. He is not unwilling, therefore, to ferve without pay during a fhort campaign, and it frequently cofts the fovereign or commonwealth as little to maintain him in the field as to prepare him for it. The citizens of all the different flates of antient Greece feem to have ferved in this manner till after the fecond Perfian war : and the people of Peloponefus till after the Peloponefian war. The Peloponefians, Thucydides observes, generally left the field in the fummer, and returned home to reap the harveft. The Roman people under their kings, and during the first ages of the republick, ferved in the fame manner. It was not till the fiege of Veii, that they, who flaid at home, began to contribute fomething towards maintaining those, who went to war. In the European monarchies, which were founded upon the ruins of the Roman empire, both before and for fome time after the eftablishment of what is properly called the feudal law, the great lords, with all their immediate dependents, ufed to ferve the crown at their own expence. In the field, in the fame manner as at home, they maintained themfelves by their own revenue, and not by any flipend or pay which they received from the king upon that particular occasion.

IN a more advanced state of fociety, two different causes contribute to render it altogether impossible that they, who take the field, should maintain themselves at their own expense. Those two causes are, the progress of manufactures, and the improvement in the art of war.

THOUGH a hufbandman fhould be employed in an expedition, provided it begins after feed-time and ends before harvest, the inter-Vol. II. Qq ruption

воок

ruption of his bufinefs will not always occafion any confiderable diminution of his revenue. Without the intervention of his labour, nature does herfelf the greater part of the work which remains tobe done. But the moment that an artificer, a fmith, a carpenter, or a weaver, for example, quits his workhoufe, the fole fource of his revenue is completely dried up. Nature does nothing. for him, he does all for himfelf. When he takes the field, therefore, in defence of the publick, as he has no revenue to maintain himfelf, he muft neceffarily be maintained by the publick. But in a country of which a great part of the inhabitants are artificers and manufacturers, a great part of the people who go to war muft be drawn from those claffes, and muft therefore be maintained by the publick as long as they are employed in its fervice.

WHEN the art of war too has gradually grown up to be a very intricate and complicated feience, when the event of war ceafes to be determined, as in the first ages of fociety, by a fingle irregular skirmish or battle, but when the contest is generally fpun out through feveral different campaigns, each of which lasts during the greater part of the year; it becomes univerfally neceflary that the publick should maintain those who ferve the publick in war, at least while they are employed in that fervice. Whatever in time of peace might be the ordinary occupation of those who go to war, fo very tedious and expensive a service would otherwise be by far too heavy a burden upon them. After the fecond Persian war, accordingly, the armies of Athens feem to have been generally composed of mercenary troops; confifting, indeed, partly of citizens, but partly too of foreigners; and all of them equally hired and paid at the expence of the flate. From the time of the fiege of Veii the armies of Rome received pay for their fervice during the time which they remained in the field. Under the feudal governments the military fervice both of the great lords and of their immediate dependents was,

was, after a certain period, univerfally exchanged for a payment in C H A P. money, which was employed to maintain those who ferved in their I. flead.

THE number of those who can go to war, in proportion to the whole number of the people, is neceffarily much finaller in a civilized, than in a rude flate of fociety. In a civilized fociety, as the foldiers are maintained altogether by the labour of those who are not foldiers, the number of the former can never exceed what the latter can maintain, over and above maintaining, in a manner fuitable to their respective flations, both themselves and the other officers of government, and law, whom they are obliged to maintain. In the little agrarian flates of antient Greece, a fourth or a fifth part of the whole body of the people confidered themselves as foldiers, and would fometimes, it is faid, take the field. Among the civilized nations of modern Europe, it is commonly computed, that not more than one hundredth part of the inhabitants of any country can be employed as foldiers, without ruin to the country which pays the expence of their fervice.

The expence of preparing the army for the field feems not to have become confiderable in any nation, till long after that of maintaining it in the field had devolved entirely upon the fovereign or commonwealth. In all the different republicks of antient Greece, to learn his military exercifes, was a neceffary part of education impofed by the flate upon every free citizen. In every city there feems to have been a publick field, in which, under the protection of the publick magiftrate, the young people were taught their different exercifes by different mafters. In this very fimple inflitution, confifted the whole expence which any Grecian flate feems ever to have been at, in preparing its citizens for war. In antient Rome the exercifes of the Campus Martius anfwered the Qq 2

BOOK fame purpose with those of the Gymnafium in antient Greece. - Under the feudal governments, the many publick ordinances that the citizens of every diffrict should practife archery as well as feveral other military exercises, were intended for promoting the fame purpofe, but do not feem to have promoted it fo well. Either from want of intereft in the officers entrufted with the execution of those ordinances, or from fome other caufe, they appear to have been univerfally neglected; and in the progress of all those governments, military exercifes feem to have gone gradually into difufe among the great body of the people.

> In the republicks of antient Greece and Rome, during the whole period of their existence, and under the feudal governments for a confiderable time after their first establishment, the trade of a foldier was not a separate, distinct trade, which constituted the sole or principal occupation of a particular class of citizens. Every subject of the flate, whatever might be the ordinary trade or occupation by which he gained his livelihood, confidered himfelf, upon all ordinary occafions, as fit likewife to exercise the trade of a foldier, and upon many extraordinary occafions as bound to exercife it.

THE art of war, however, as it is certainly the nobleft of all arts, fo in the progrefs of improvement it neceffarily becomes one of the most complicated among them. The state of the mechanical, as well as of fome other arts, with which it is neceffarily connected, determines the degree of perfection to which it is capable of being carried at any particular time. But in order to carry it to this degree of perfection, it is neceffary that it should become the fole or principal occupation of a particular class of citizens, and the divifion of labour is as necessary for the improvement of this, as of every other art. Into other arts the division of labour is naturally introduced by the prudence of individuals, who find that they promote

300

-----

promote their private intereft better by confining themfelves to a C II A P. particular trade, than by exercifing a great number. But it is the wifdom of the flate only which can render the trade of a foldier a particular trade feparate and diffinct from all others. A private citizen who, in time of profound peace and without any particular encouragement from the publick, fhould fpend the greater part of his time in military exercifes, might, no doubt, both improve himfelf very much in them, and amufe himfelf very well; but he certainly would not promote his own intereft. It is the wifdom of the flate only which can render it for his intereft to give up the greater part of his time to this peculiar occupation : and flates have not always had this wifdom, even when their circumflances had become fuch, that the prefervation of their exiftence required that they fhould. have it.

A SHEPHERD has a great deal of leifure; a hufbandman, in the rude state of husbandry, has some; an artificer or manufacturer has none at all. The first may, without any loss, employ a great deal of his time in martial exercifes; the fecond may employ fome part of it; but the last cannot employ a fingle hour in them without fome lofs, and his attention to his own interest naturally leads him to neglect them altogether. These improvements in husbandry too, which the progress of arts and manufactures necessarily introduces, leaves the hufbandman as little leifure as the artificer. Military exercises come to be as much neglected by the inhabitants of the country as by those of the town, and the great body of the people becomes altogether unwarlike. That wealth, at the fame time, which always follows the improvements of agriculture and manufactures, and which in reality is no more than the accumulated produce of those improvements, provokes the invalion of all their neighbours. An industrious, and upon that account a wealthy nation, is of all nations the moft likely to be attacked; and unlefs the flate takes,

BOOK takes fome new measures for the publick defence, the natural habits of the people render them altogether incapable of defending themfelves.

> In these circumstances, there seem to be but two methods, by which the state can make any tolerable provision for the publick defence.

> It may either, first, by means of a very rigorous police, and in fpite of the whole bent of the interest, genius and inclinations of the people, enforce the practice of military exercises, and oblige either all the citizens of the military age, or a certain number of them, to join in fome measure the trade of a foldier to whatever other trade or profession they may happen to carry on.

> OR, fecondly, by maintaining and employing a certain number of citizens in the conftant practice of military exercises, it may render the trade of a foldier a particular trade, separate and distinct from all others.

IF the flate has recourfe to the firft of those two expedients, its military force is faid to confift in a militia; if to the fccond, it is faid to confift in a flanding army. The practice of military exercises is the fole or principal occupation of the foldiers of a flanding army, and the maintenance or pay which the flate affords them is the principal and ordinary fund of their fubfiftence. The practice of military exercises is only the occasional occupation of the foldiers of a militia, and they derive the principal and ordinary fund of their fubfiftence from fome other occupation. In a militia, the character of the labourer, artificer, or tradefman, predominates over that of the foldier : in a flanding army, that of the foldier predominates over every other character; and in this diffinction feems to confift 4

.. 302

303

СНАР.

the effential difference between those two different species of military force.

MILITIAS have been of feveral different kinds. In some countries the citizens deftined for defending the flate, feem to have been exercifed only, without being, if I may fay fo, regimented; that is, without being divided into feparate and diffinct bodies of troops, each of which performed its exercifes under its own proper and permanent officers. In the republicks of ancient Greece and Rome each citizen, as long as he remained at home, feems to have practifed his exercifes either feparately and independently, or with fuch of his equals as he liked beft; and not to have been attached to any particular body of troops till he was actually called upon to take the field. In other countries, the militia has not only been exercifed, but regimented. In England, in Switzerland, and, I believe, in every other country of modern Europe, where any imperfect military force of this kind has been established, every militia-man is, even in time of peace, attached to a particular body of troops, which performs its exercifes under its own proper and permanent officers.

BEFORE the invention of fire-arms, that army was fuperior in which the foldiers had, each individually, the greateft fkill and dexterity in the ufe of their arms. Strength and agility of body were of the higheft confequence, and commonly determined the fate of battles. But this fkill and dexterity in the ufe of their arms, could be acquired only, in the fame manner as fencing is at prefent, by practifing, not in great bodies, but each man feparately, in a particular fchool, under a particular mafter, or with his own particular equals and companions. Since the invention of fire-arms, ftrength and agility of body, or even extraordinary dexterity and fkill in the ufe of arms, though they are far from being of no confequence, are, however, of lefs confequence. The nature of the weapon; though it

304

воок

it by no means puts the awkward upon a level with the fkilful, puts him more nearly fo than he ever was before. All the dexterity and fkill, it is fuppofed, which are neceffary for using it, can be well enough acquired by practifing in great bodies.

REGULARITY, order, and prompt obedience to command, are qualities which, in modern armies, are of more importance towards determining the fate of battles, than the dexterity and skill of the foldiers in the use of their arms. But the noise of fire-arms, the fmoke, and the invilible death to which every man feels himfelf every moment exposed, as foon as he comes within cannon-fhot, and frequently a long time before the battle can be well faid to be engaged, must render it very difficult to maintain any confiderable degree of this regularity, order, and prompt obedience, even in the beginning of a modern battle. In an antient battle there was no noise but what arose from the human voice; there was no fmoke, there was no invisible cause of wounds or death. Every man, till fome mortal weapon actually did approach him, faw clearly that no fuch weapon was near him. In these circumstances, and among troops who had fome confidence in their own skill and dexterity in the use of their arms, it must have been a good deal less difficult to preferve some degree of regularity and order, not only in the beginning, but through the whole progress of an antient battle, and till one of the two-armies was fairly defeated. But the habits of regularity, order, and prompt obedience to command, can be acquired only by troops which are exercifed in great bodies.

A MILITIA, however, in whatever manner it may be either difciplined or exercifed, muft always be much inferior to a well difciplined and well exercifed flanding army.

THÈ foldiers, who are exercifed only once a week, or once a month, can never be fo expert in the ufe of their arms, as those who

who are exercifed every day or every other day; and though this C H A P. circumftance may not be of fo much confequence in modern, as it was in antient times; yet the acknowledged fuperiority of the Pruffian troops, owing, it is faid, very much to their fuperior expertnefs in their exercife, may fatisfy us that it is, even at this day, of very confiderable confequence.

THE foldiers, who are bound to obey their officer only once a week or once a month, and who are at all other times at liberty to manage their own affairs their own way, without being in any refpect accountable to him, can never be under the fame awe in his prefence, can never have the fame difpolition to ready obedience, with those whose whole life and conduct are every day directed by him, and who every day even rife and go to bed, or at least retire to their quarters, according to his orders. In what is called discipline, or in the habit of ready obedience, a militia must always be so fill more inferior to a standing army, than it may fometimes be in what is called the manual exercise, or in the management and use of its arms. But in modern war the habit of ready and instant obedience is of much greater confequence than a confiderable superiority in the management of arms.

THOSE militias which, like the Tartar or Arab militia, go to war under the fame chieftains whom they are accuftomed to obey in peace, are by far the beft. In refpect for their officers, in the habit of ready obedience, they approach neareft to ftanding armies. The highland militia, when it ferved under its own chieftains, had fome advantage of the fame kind. As the highlanders, however, were not wandering, but ftationary fhepherds, as they had all a fixed habitation, and were not, in peaceable times, accuftomed to follow their chieftain from place to place; fo in time of war they were lefs willing to follow him to any confiderable diffance, or to continue for any long time in the field. When they had acquired any booty. Vol. II. R r

306

they were eager to: return home, and his authority was feldom fufficient to detain them. In point of obedience they were always muchinferior to what is reported of the Tartars and Arabs. As the highlanders too, from their flationary life, fpend lefs of their time in the open air, they were always lefs accuftomed to military exercifes, and were lefs expert in the ufe of their arms than the Tartars and. Arabs are faid to be,

A MILITIA of any kind, it must be observed, however, which has ferved for feveral fucceffive campaigns in the field, becomes inevery respect a flanding army. The foldiers are every day exercised in the use of their arms, and, being constantly under the command of their officers, are habituated to the same prompt obedience which, takes place in flanding armies. What they were before they took, the field, is of little importance. They necessfarily become in every respect a flanding army, after they have passed a few campaigns in. it. Should the war in America drag out through another campaign, the American militia may become in every respect a match for that. should the value of which the value appeared, in the last war, at: least not inferior to that of the hardiest veterans of France and Spain.

THIS diffinction being well underflood, the hiftory of all ages; it will be found, bears teftimony to the irrefiftible fuperiority which: a well-regulated flanding army has over a militia.

ONE of the first standing armies of which we have any distinct account, in any well authenticated history, is that of Philip of Macedon. His frequent wars with the Thracians, Illyrians, Theffalians, and fome of the Greek cities in the neighbourhood of Macedon, gradually formed his troops, which in the beginning were probably militia, to the exact discipline of a standing army. When he was at peace, which he was very feldom, and never for any

long

long time together, he was careful not to difband that army. It CHAP. vanquifhed and fubdued, after a long and violent flruggle indeed, the gallant and well exercifed militias of the principal republicks of antient Greece; and afterwards, with very little flruggle, the effeminate and ill exercifed militia of the great Perfian empire. The fall of the Greek republicks and of the Perfian empire, was the effect of the irrefiftible fuperiority which a flanding army has over every fort of militia. It is the firft great revolution in the affairs of mankind of which hiftory has preferved any diffinct or circumflantial account.

- THE fall of Carthage, and the confequent elevation of Rome, is the fecond. All the varieties in the fortune of those two famous republicks may very well be accounted for from the fame cause.

FROM the end of the first to the beginning of the second Carthaginian war, the armies of Carthage were continually in the field, and employed under three great generals, who fucceeded one another in the command; Amilcar, his fon-in-law Afdrubal, and his fon Annibal; first in chastiling their own rebellious flaves, afterwards in fubduing the revolted nations of Africa, and, laftly, in conquering the great kingdom of Spain. The army which Annibal led from Spain into Italy must necessarily, in those different wars, have been gradually formed to the exact discipline of a standing army. The Romans, in the mean time, though they had not been altogether at peace, yet they had not, during this period, been engaged in any war of very great confequence; and their military discipline, it is generally faid, was a good deal relaxed. The Roman armies which Annibal encountered at Trebia, Thrafymenus, and Cannæ, were militia oppofed to a flanding army. This circumflance, it is probable, contributed more than any other to determine the fate of those battles.

Rr 2

THE

308

BOOK

THE fanding army which Annibal left behind him in Spain, had the like superiority over the militia which the Romans fent to oppose it, and in a few years, under the command of his brother, the younger Afdrubal, expelled them almost entirely from that country." Br . V . C. C.

ANNIBAL was ill supplied from home. The Roman militia, being continually in the field, became in the progrefs of the war a well disciplined and well exercised standing army; and the superiority of Annibal grew every day lefs and lefs. Afdrubal judged it neceffary to lead the whole, or almost the whole of the standing army which he commanded in Spain, to the affiftance of his brother in Italy. In his march he is faid to have been milled by his guides; and in a country which he did not know, was furprized and attacked by another flanding army, in every refpect equal or fuperior to his own, and was entirely defeated.

WHEN Afdrubal had left Spain, the great Scipio found nothing to oppose him but a militia inferior to his own. He conquered and fubdued that militia, and, in the courfe of the war, his own militia neceffarily became a well disciplined and well exercised standing army. That standing army was afterwards carried to Africa, where it found nothing but a militia to oppose it. In order to defend Carthage it became neceffary to recall the flanding army of Annibal. The difheartened and frequently defeated African militia joined it, and, at the battle of Zama, composed the greater part of the troops of Annibal. The event of that day determined the fate of the two rival republicks.

FROM the end of the fecond Carthaginian war till the fall of the Roman republick, the armies of Rome were in every respect standing armies. The flanding army of Macedon made fomeresistance

refifiance to their arms. In the height of their grandeur, it coft CHAP. them two great wars, and three great battles, to fubdue that little kingdom; of which the conquest would probably have been still more difficult, had it not been for the cowardice of its last king. The militias of all the civilized nations of the ancient world, of Greece, of Syria, and of Egypt, made but a feeble refiftance to the standing armies of Rome. The militias of some barbarous nations defended themfelves much better. The Scythian or Tartar militia, which Mithridates drew from the countries north of the Euxine and Cafpian feas, were the most formidable enemies whom the Romans had to encounter after the fecond Carthaginian war. The Parthian and German militias too were always refpectable, and, upon feveral occafions, gained very confiderable advantages over the Roman armies. In general, however, and when the Roman armies were well commanded, they appear to have been very much superior; and if the Romans did not pursue the final conquest either of Parthia or Germany, it was probably because they judged, that it was not worth while, to add those two barbarouscountries to an empire which was already too large. The antient Parthians appear to have been a nation of Scythian or Tartar extraction, and to have always retained a good deal of the mannersof their anceftors. The ancient Germans were, like the Scythiansor Tartars, a nation of wandering shepherds, who went to war under the fame chiefs whom they were accustomed to follow in peace. Their militia was exactly of the fame kind with that of the Scythians or Tartars, from whom too they were probably defcended.

MANY different caufes contributed to relax the difcipline of the Roman armies. Its extreme feverity was, perhaps, one of thofecauses. In the days of their grandeur, when no enemy appeared capable of opposing them, their heavy armour was laid aside asunneceffarily. 1

310

BOOK unneceffarily burdenfome, their laborious exercifes were neglected as unnecessarily toilfome. Under the Roman emperors befides, the flanding armies of Rome, those particularly which guarded the German and Pannonian frontiers, became dangerous to their masters, against whom they used frequently to set up their own generals. In order to render them lefs formidable, according to fome authors, Dioclesian, according to others, Constantine, first withdrew them from the frontier, where they had always before been encamped in great bodies, generally of two or three legions each, and difperfed them in finall bodies through the different provincial towns, from whence they were fcarce ever removed, but when it became necessary to repel an invasion. Small bodies of foldiers quartered in trading and manufacturing towns, and feldom removed from those quarters, became themselves tradefmen, artificers, and manufacturers. The civil came to predominate over the military character; and the standing armies of Rome gradually degenerated into a corrupt, neglected, and undifciplined militia, incapable of refifting the attack of the German and Scythian militias, which foon afterwards invaded the western empire. It was only by hiring the militia of fome of those nations, to oppose to that of others, that the emperors were for some time able to defend themfelves. The fall of the western empire is the third great revolution in the affairs of mankind, of which antient history has preferved any distinct or circumstantial account. It was brought about by the irrefiftible fuperiority which the militia of a barbarous, has over that of a civilized nation; which the militia of a nation of shepherds, has over that of a nation of husbandmen, artificers, and manufacturers. The victories which have been gained by militias have generally been, not over flanding armies, but over other militias in exercife and difcipline inferior to themfelves. Such were the victories which the Greek militia gained over that of the Perfian empire; and fuch too were those which in

in later times the Swifs militia gained over that of the Auftrians C H A P. and Burgundians.

THE military force of the German and Scythian nations who established themselves upon the ruins of the western empire, continued for fome time to be of the fame kind in their new fettlements, as it had been in their original country. It was a militia of shepherds and husbandmen, which, in time of war, took the field under the command of the fame chieftains whom it was accustomed. to obey in peace. It was, therefore, tolerably well exercifed, and tolerably well difciplined: As arts and industry advanced; however; the authority of the chieftains gradually decayed, and the great body of the people had lefs time to fpare for military exercifes: Both the discipline and the exercise of the feudal militia; therefore; went gradually to ruin, and flanding armies were gradually introduced to supply the place of it. When the expedient of a flanding army, befides, had once been adopted by one civilized nation, it became neceffary that all its neighbours fhould follow the example: They foon found that their fafety depended upon their doing for. and that their own militia was altogether incapable of refifting the: attack of fuch an army.

THE foldiers of a ftanding army, though they may never have feen an enemy, yet have frequently appeared to poffefs all the courage of veteran troops, and the very moment that they took the field to have been fit to face the hardieft and most experienced veterans. In 1756, when the Ruffian army marched into Poland, the valour of the Ruffian foldiers did not appear inferior to that of the Pruffians, at that time fuppofed to be the hardieft and most experienced veterans in Europe. The Ruffian empire, however, had enjoyed a profound peace for near twenty years before, and could at that time have very few foldiers who had ever feen an enemy. When they 3II

воок

the Spanish war broke out in 1739, England had enjoyed a profound peace for about eight and twenty years. The valour of her foldiers, however, far from being corrupted by that long peace, was never more diffinguished than in the attempt upon Carthagena, the first unfortunate exploit of that unfortunate war. In a long peace the generals, perhaps, may fometimes forget their skill; but, where a well regulated standing army has been kept up, the foldiers feem never to forget their valour.

WHEN a civilized nation depends for its defence upon a militia, it is at all times exposed to be conquered by any barbarous nation which happens to be in its neighbourhood. The frequent conquests of all the civilized countries in Afia by the Tartars, sufficiently demonstrates the natural superiority, which the militia of a barbarous, has over that of a civilized nation. A well regulated standing army is superior to every militia. Such an army, as it can best be maintained by an opulent and civilized nation, so it can alone defend such a nation against the invasion of a poor and barbarous neighbour. It is only by means of a standing army, therefore, that the civilization of any country can be perpetuated, or even preferved for any confiderable time.

As it is only by means of a well regulated ftanding army that a civilized country can be defended; fo it is only by means of it, that a barbarous country can be fuddenly and tolerably civilized. A ftanding army eftablifhes, with an irrefiftible force, the law of the fovereign through the remoteft provinces of the empire, and maintains fome degree of regular government in countries which could not otherwife admit of any. Whoever examines, with attention, the improvements which Peter the Great introduced into the Ruffian empire, will find that they almoft all refolve themfelves into the eftablifhment of a well regulated ftanding army. It is the inftrument

ment which executes and maintains all his other regulations. That C H A P. degree of order and internal peace, which that empire has ever fince enjoyed, is altogether owing to the influence of that army.

MEN of republican principles have been jealous of a flanding army as dangerous to liberty. It certainly is fo, wherever the intereft of the general and that of the principal officers are not neceffarily connected with the fupport of the conflication of the flate. The flanding army of Cæfar deftroyed the Roman repub-The flanding army of Cromwell turned the long parlialick. ment out of doors. But where the fovereign is himfelf the general, and the principal nobility and gentry of the country the chief officers of the army; where the military force is placed under the command of those who have the greatest interest in the support of the civil authority, because they have themselves the greatest share of that authority, a standing army can never be dangerous to liberty. On the contrary, it may in fome cafes be favourable to liberty. The fecurity which it gives to the fovereign renders unneceffary that troublefome jealoufy, which in fome modern republicks, feems to watch over the minutest actions, and to be at all times ready to diffurb the peace of every citizen. Where the fecurity of the magiftrate, though fupported by the principal people of the country, is endangered by every popular difcontent; where a finall tumult is capable of bringing about in a few hours a great revolution, the whole authority of government must be employed to suppress and punish every murmur and complaint against it. To a fovereign, on the contrary, who feels himfelf supported, not only by the natural aristocracy of the country, but by a well regulated flanding army, the rudeft, the moft groundlefs, and the moft licentious remonstrances can give little difturbance. He can fafely pardon or neglect them, and his confcioufnefs of his own fuperiority naturally difpofes him to do VOL. II. Sf ſo.

C H A P. fo. That degree of liberty which approaches to licentioufnefs can be tolerated only in countries where the fovereign is fecured by a well regulated flauding army. It is in fuch countries only, that the publick fafety does not require, that the fovereign fhould be trufted with any diferentionary power, for fupprefing even the impertinent wantonnefs of this licentious liberty.

> THE first duty of the fovereign, therefore, that of defending the fociety from the violence and injustice of other independent focieties, grows gradually more and more expensive, as the fociety advances in civilization. The military force of the fociety, which originally cost the fovereign no expence either in time of peace or in time of war, must, in the progress of improvement, first be maintained by him in time of war, and afterwards even in time of peace.

THE great change introduced into the art of war by the invention of fire arms, has enhanced flill further both the expence of exercifing and difciplining any particular number of foldiers in time of peace, and that of employing them in time of war. Both their arms and their ammunition are become more expensive A mulquet is a more expensive machine than a javelin or a bow and arrows; a cannon or a mortar, than a balista or a catapulta. The powder, which is fpent in a modern review, is loft irrecoverably, and occafions a very confiderable expence. The javelins and arrows which were thrown or fhot in an ancient one, could eafily be picked up again, and were befides of very little value. The cannon and the mortar are, not only much dearer, but much heavier machines than the balifta or catapulta, and require a greater expence, not only to prepare them for the field, but to carry them to it. As the fuperiority of the modern artillery too. over that of the antients, is very great; it has become much more difficult.

314

difficult, and confequently much more expensive, to fortify a town fo as to refift even for a few weeks the attack of that fuperior artillery. In modern times many different caufes contribute to render the defence of the fociety more expensive. The unavoidable effects of the natural progress of improvement have, in this refpect been a good deal enhanced by a great revolution in the art of war, to which a mere accident, the invention of gunpowder, feems to have given occasion.

IN modern war the great expence of fire-arms gives an evident advantage to the nation which can beft afford that expence; and confequently, to an opulent and civilized, over a poor and barbarous nation. In antient times the opulent and civilized found it difficult to defend themfelves against the poor and barbarous nations. In modern times the poor and barbarous find it difficult to defend themfelves against the opulent and civilized. The invention of fire-arms, an invention which at first fight appears to be fo pernicious, is certainly favourable both to the permanency and to the extension of civilization.

### PART II.

## Of the Expence of Justice.

THE fecond duty of the fovereign, that of protecting, as far as poffible, every member of the fociety from the injuffice or oppreffion of every other member of it, or the duty of effablishing an exact administration of justice, requires too very different degrees of expence in the different periods of fociety.

AMONG nations of hunters, as there is fearce any property, or at leaft none that exceeds the value of two or three days labour; fo there is feldom any cftablifhed magiftrate or any regular adminification of juffice. Men who have no property can injure one S f 2 another 315

BOOK V.

316

another only in their perfons or reputations. But when one man kills, wounds, beats, or defames another, though he to whom the ----injury is done fuffers, he who does it receives no benefit. It is otherwife with the injuries to property. The benefit of the perfor who does the injury is often equal to the lofs of him who fuffers it. Envy, malice, or refentment, are the only paffions which can prompt one man to injure another in his perfon or reputation. But the greater part of men are not very frequently under the influence of those passions; and the very worst men are so only occafionally. As their gratification too, how agreeable foever it may be to certain characters, is not attended with any real or permanent advantage, it is in the greater part of men commonly restrained by prudential confiderations. Men may live together in fociety with fome tolerable degree of fecurity, though there is no civil magistrate to protect them from the injustice of those passions. But avarice and ambition in the rich, in the poor the hatred of labour and the love of prefent eafe and enjoyment, are the paffions which prompt to invade property, paffions much more fleady in their operation, and much more universal in their influence. Wherever there is great property, there is great inequality. For one very rich man, there must be at least five hundred poor, and the affluence of the few fuppofes the indigence of the many. The affluence of the rich excites the indignation of the poor, who are often both driven by want, and prompted by envy, to invade his poffeffions. It is only under the thelter of the civil magiftrate that the owner of that valuable property, which is acquired by the labour of many years, or perhaps of many successive generations, can sleep a fingle night in fecurity. He is at all times furrounded by unknown enemies, whom, though he never provoked, he can never appeale, and from whofe injuffice he can be protected only by the powerful arm of the civil magistrate continually held up to chastife it. The acquifition

fition of valuable and extensive property, therefore, neceffarily re- C II A P. quires the eflablishment of civil government. Where there is no property, or at leaft none that exceeds the value of two or three days labour, civil government is not fo neceffary.

CIVIL government fuppofes a certain fubordination. But as the neceffity of civil government gradually grows up with the acquifition of valuable property, fo the principal caufes which naturally introduce fubordination gradually grow up with the growth of that valuable property.

THE caufes or circumflances which naturally introduce fubordination, or which naturally, and antecedent to any civil inftitution, give fome men fome fuperiority over the greater part of their brethren, feem to be four in number.

THE first of those causes or circumstances is the fuperiority of perfonal qualifications, of ftrength, beauty, and agility of body; of wildom, and virtue, of prudence, justice, fortitude, and moderation of mind. The qualifications of the body, unless fupported by those of the mind, can give little authority in any period of fociety. He is a very ftrong man who, by mere ftrength of body, can force two weak ones to obey him. The qualifications of the mind can alone give very great authority. They are, however, invisible qualities; always disputable, and generally disputed. No fociety, whether barbarous or civilized, has ever found it convenient to fettle the rules of precedency, of rank and fubordination, according to those invisible qualities; but according to fomething that is more plain and palpable.

THE fecond of those causes or circumstances is the superiority of age. An old man, provided his age is not so far advanced as to give sufficient of dotage, is every where more respected than a young

young man of equal rank, fortune, and abilities. Among nations of hunters, fuch as the native tribes of North America, age is the fole foundation of rank and precedency. Among them, father is the appellation of a fuperior; brother, of an equal; and fon, of an inferior. In the moft opulent and civilized nations, age regulates rank among those who are in every other respect equal, and among whom, therefore, there is nothing elfe to regulate it. Among brothers and among fifters, the eldeft always take place; and in the fucceffion of the paternal effate every thing which cannot be divided, but must go entire to one perfon, fuch as a title of honour, is in most cafes given to the eldeft. Age is a plain and palpable quality which admits of no difpute.

THE third of those causes or circumstances is the superiority of fortune. The authority of riches, however, though great in every age of fociety, is perhaps greateft in the rudeft age of fociety which admits of any confiderable inequality of fortune. A Tartar chief, the increase of whole herds and flocks is fufficient to maintain a thousand men, cannot well employ that increase in any other way than in maintaining a thousand men. The rude state of his fociety does not afford him any manufactured produce, any trinkets or baubles of any kind, for which he can exchange that part of his rude produce which is over and above his own confumption. The thousand men whom he thus maintains, depending entirely upon him for their fubfistence, must both obey his orders in war, and fulmit to his jurifdiction in peace. He is neceffarily both their general and their judge, and his chieftainfhip is the necessary effect of the superiority of his fortune. In an opulent and civilized fociety, a man may posses a much greater fortune, and yet not be able to command a dozen of people. Though the produce of his eflate may be fufficient to maintain, and may perhaps actually maintain, more than a thoufand people,

1

yet

BOOK

\_\_\_\_

yet as those people pay for every thing which they get from him, CHAP. as he gives fearce any thing to any body but in exchange for an equivalent, there is fearce any body who confiders himfelf as entirely dependent upon him, and his authority extends only over a few menial fervants. The authority of fortune, however, is very great even in an opulent and civilized fociety. That it is much greater than that, either of age, or of perfonal qualities, has been the conflant complaint of every period of fociety which admitted of any confiderable inequality of fortune. The first period of fociety, that of hunters, admits of no fuch inequality. Universal poverty eftablishes there universal equality, and the superiority, either of age, or of perfonal qualities are the feeble, but the fole foundations of authority and fubordination. There is therefore little or no authority or fubordination in this period of fociety. The fecond period of fociety, that of fhepherds, admits of very great inequalities of fortune, and there is no period in which the fuperiority of fortune gives fo great authority to those who poffefs it. There is no period accordingly in which authority and fubordination are more perfectly eftablished. The authority of an Arabian fcherif is very great; that of a Tartar khan altogether despotical.

The fourth of those causes or circumflances is the superiority of birth. Superiority of birth supposes an antient superiority of fortune in the family of the perfon who claims it. All families are equally ancient; and the ancessors of the prince, though they may be better known, cannot well be more numerous than those of the beggar. Antiquity of family means every where the antiquity either of wealth, or of that greatness which is commonly, either founded upon wealth, or accompanied with it. Upflart greatness is every where less respected than ancient greatness. The hatred of usurpers, the love of the family of an antient monarch, area

320 BOOK

are, in a great measure, founded upon the contempt which men naturally have for the former, and upon their veneration for the latter. As a military officer fubmits without reluctance to the authority of a fuperior by whom he has always been commanded, but cannot bear that his inferior fhould be fet over his head; fo men eafily fubmit to a family to whom they and their anceftors have always fubmitted; but are fired with indignation when another family, in whom they had never acknowledged any fuch fuperiority, affumes a dominion over them.

THE diffinction of birth, being fublequent to the inequality of fortune, can have no place in nations of hunters, among whom all men, being equal in fortune, must likewise be very nearly equal in birth. The fon of a wife and brave man may, indeed, even among them, be somewhat more respected than a man of equal merit who has the misfortune to be the fon of a fool or a coward. The difference, however, will not be very great; and there never was, I believe, a great family in the world whofe illustration was entirely derived from the inheritance of wifdom and virtue.

THE diffinction of birth not only may, but always does take place among nations of fhepherds. Such nations are always ftrangers to every fort of luxury, and great wealth can fcarce ever be diffipated among them by improvident profusion. There are no nations accordingly who abound more in families revered and honoured on account of their defcent from a long race of great and illustrious ancestors; because there are no nations among whom wealth is likely to continue longer in the fame families.

BIRTH and fortune are evidently the two circumftances which principally fet one man above another. They are the two great fources

of

of perfonal diffinction, and are therefore the principal caufes which naturally eftablish authority and subordination among men. Among nations of fhepherds both those causes operate with their full force. The great fhepherd or herdfman, respected on account of his great wealth, and of the great number of those who depend upon him for fubfistence, and revered on account of the noblenefs of his birth, and of the immemorial antiquity of his illustrious family, has a natural authority over all the inferior shepherds or herdsmen of his horde or clan. He can command the united force of a greater number of people than any of them. His military power is greater than that of any of them. In time of war they are all of them naturally difposed to muster themselves under his banner, rather than under that of any other perfon, and his birth and fortune thus naturally procure to him fome fort of executive power. . By commanding too the united force of a greater number of people than any of them, he is best able to compel any one of them who may have injured another to compensate the wrong. He is the person, therefore, to whom all those who are too weak to defend themselves naturally look up for protection. It is to him that they naturally complain of the injuries which they imagine have been done to them, and his interpolition in fuch cafes is more eafily fubmitted to, even by the perfon complained of, than that of any other perfon would be. His birth and fortune thus naturally procure him fome fort of judicial authority.

IT is in the age of fhepherds, in the fecond period of fociety, that the inequality of fortune first begins to take place, and introduces among men a degree of authority and fubordination which could not possibly exist before. It thereby introduces fome degree of that civil government which is indifpensably necessary for its own prefervation: and it feems to do this naturally, and even independent of the confideration of that necessity. The confideration of that Vol. II. - T t necessity 321

BOOK V.

322

neceffity comes no doubt afterwards to contribute very much to maintain and fecure that authority and fubordination. The rich, in particular, are neceffarily interefted to support that order of things, which can alone fecure them in the possession of their own advantages. Men of inferior wealth combine to defend those of fuperior wealth in the possefion of their property, in order that men of superior wealth may combine to defend them in the possefion of theirs. All the inferior shepherds and herdsmen feel that the security of their own herds and flocks depends upon the fecurity of those of the great shepherd or herdsman; that the maintenance of their leffer authority depends upon that of his greater authority, and that upon their fubordination to him depends his power of keeping their inferiors in fubordination to them. They conftitute a fort of little nobility, who feel themfelves interested to defend the property and to support the authority of their own little fovereign, in order that he may be able to defend their property and to support their authority. Civil government, fo far as it is inftituted for the fecurity of property, is in reality inftituted for the defence of the rich against the poor, or of those who have fome property against those who have none at all.

THE judicial authority of fuch a fovereign, however, far from being a caufe of expence, was for a long time a fource of revenue to him. The perfons who applied to him for juffice were always willing to pay for it, and a prefent never failed to accompany a petition. After the authority of the fovereign too was thoroughly eftablifhed, the perfon found guilty, over and above the fatisfaction which he was obliged to make to the party, was likewife forced to pay an amercement to the fovereign. He had given trouble, he had diffurbed, he had broke the peace of his lord the king, and for thofe offences an amercement was thought due. In the Tartar govern-

2

ments

ments of Asia, in the governments of Europe which were CHAP. founded by the German and Scythian nations who overturned the Roman empire, the administration of justice was a confiderable fource of revenue, both to the fovereign, and to all the leffer chiefs or lords who exercifed under him any particular jurifdiction, either over some particular tribe or clan, or over some particular territory or diffrict. Originally both the fovereign and the inferior chiefs used to exercise this jurisdiction in their own persons. Afterwards they univerfally found it convenient to delegate it to fome This substitute, however, was still substitute, bailiff, or judge. obliged to account to his principal or conftituent for the profits of the jurifdiction. Whoever reads the inftructions \* which were given to the judges of the circuit in the time of Henry II. will fee clearly that those judges were a fort of itinerant factors, fent round the country for the purpose of levying certain branches of the king's revenue. In those days the administration of justice, not only afforded a certain revenue to the fovereign, but to procure this revenue feems to have been one of the principal advantages which he proposed to obtain by the administration of justice.

THIS fcheme of making the administration of justice fubfervient to the purposes of revenue, could fcarce fail to be productive of feveral very gross abuses. The perfon, who applied for justice with a large present in his hand, was likely to get something more than justice; while he, who applied for it with a small one, was likely to get something less. Justice too might frequently be delayed, in order that this present might be repeated. The amercement, besides, of the person complained of, might frequently fuggest a very strong reason for finding him in the wrong, even when he had not really been fo. That such abuses were far from being uncommon, the antient history of every country in Europe bears witness.

\* They are to be found in Tyrrell's Hiftory of England.

T t 2

WHEN

324

BOOK

WHEN the fovereign or chief exercifed his judicial authority in his own perfon, how much soever he might abuse it, it must have been fcarce possible to get any redrefs; because there could feldom be any body powerful enough to call him to account. When he exercifed it by a bailiff, indeed, redrefs might fometimes be had. If it was for his own benefit only, that the bailiff had been guilty of any act of injuffice, the fovereign himfelf might not always be unwilling to punish him, or to oblige him to repair the wrong. But if it was for the benefit of his fovereign, if it was in order to make court to the perfon who appointed him and who might prefer him, that he had committed any act of oppression, redrefs would upon most occasions be as impoffible as if the fovereign had committed it himfelf. In all barbarous governments, accordingly, in all those antient governments of Europe in particular, which were founded upon the ruins of the Roman empire, the administration of justice appears for a long time to have been extremely corrupt; far from being quite equal and impartial even under the best monarchs, and altogether profligate under the worft.

AMONG nations of fhepherds, where the fovereign or chief is only the greateft fhepherd or herdfman of the horde or clan, he is maintained in the fame manner as any of his vaffals or fubjects, by the increase of his own herds or flocks. Among those nations of hufbandmen who are but just come out of the fhepherd flate, and who are not much advanced beyond that flate; fuch as the Greek tribes appear to have been about the time of the Trojan war, and our German and Scythian ancestors when they first fettled upon the ruins of the western empire; the fovereign or chief is, in the fame manner, only the greatest landlord of the country, and is maintained, in the fame manner as any other landlord, by a revenue derived from his own private effate, or from what, in modern Europe, was called the demesse of the crown. His support.

his support, except when, in order to protect them from the oppreffion of fome of their fellow-fubjects, they fland in need of his authority. The prefents which they make him upon fuch occasions, conflitute the whole ordinary revenue, the whole of the emoluments which, except perhaps upon fome very extraordinary emergencies, he derives from his dominion over them. When Agamemnon, in Homer, offers to Achilles for his friendship the fovereignty of feven Greek cities, the fole advantage which he mentions as likely to be derived from it, was, that the people would honour him with prefents. As long as fuch prefents, as long as the emoluments of juffice, or what may be called the fees of court, conflituted in this manner the whole ordinary revenue which the fovereign derived from his fovereignty, it could not well be expected, it could not even decently be proposed that he should give them up altogether. It might, and it frequently was propoled, that he should regulate and afcertain them. But after they had been fo regulated and afcertained, how to hinder a perfon who was all-powerful from extending them beyond those regulations, was still very difficult, not to fay impoffible. During the continuance of this flate of things, therefore, the corruption of juffice, naturally refulting from the arbitrary and uncertain nature of those prefents, fcarce admitted of any effectual remedy.

BUT when from different caufes, chiefly from the continually increasing expence of defending the nation against the invasion of other nations, the private estate of the fovereign had become altogether infufficient for defraying the expence of the fovereignty; and when it had become necessary that the people should, for their own fecurity, contribute towards this expence by taxes of different kinds, it feems to have been very commonly stipulated that nopresent for the administration of justice should, under any pretence, be accepted either by the fovereign, or by his bailists and substitutes.

BOOK V. fitutes, the judges. Those prefents, it seems to have been supposed, could more easily be abolished altogether, than effectually regulated and afcertained. Fixed falaries were appointed to the judges? which-were supposed to compensate to them the loss of whatever might have been their share of the antient emoluments of justice; as the taxes more than compensated to the fovereign the loss of his. Justice was then faid to be administered gratis.

> JUSTICE, however, never was in reality administered gratis in any country. Lawyers and attornies, at least, must always be paid by the parties; and, if they were not, they would perform their duty still worfe than they actually perform it. The fees annually paid to lawyers and attornies amount, in every court, to a much greater fum than the falaries of the judges. The circumstance of those falaries being paid by the crown, can no where much diminish the neceffary expence of a law-fuit. But it was not fo much to diminish the expence, as to prevent the corruption of justice, that the judges were prohibited from receiving any prefent or fee from the parties.

> THE office of judge is in itfelf fo very honourable, that men are willing to accept of it, though accompanied with very fmall emoluments. The inferior office of juffice of peace, though attended with a good deal of trouble, and in most cafes with no emoluments at all, is an object of ambition to the greater part of our country gentlemen. The falaries of all the different judges, high and low, together with the whole expence of the administration and execution of juffice, even where it is not managed with very good œconomy, makes, in any civilized country, but a very inconfiderable part of the whole expence of government.

> THE whole expence of justice too might eafily be defrayed by the fees of court; and, without exposing the administration of justice to

to any real hazard of corruption, the public revenue might thus be entirely discharged from a certain, though, perhaps, but a small incumbrance. It is difficult to regulate the fees of court effectually, where a perfon fo powerful as the fovereign is to fhare in them, and to derive any confiderable part of his revenue from them. It is very eafy, where the judge is the principal perfon who can reap any benefit from them. The law can very eafily oblige the judge to respect the regulation, though it might not always be able to make the fovereign respect it. Where the fees of court are precifely regulated and afcertained, where they are paid all at once, at a certain period of every process, into the hands of a cashier or receiver, to be by him distributed in certain known proportions among the different judges after the procefs is decided, and not till it is decided, there feems to be no more danger of corruption than where fuch fees are prohibited altogether. Thole fees, without occasioning any confiderable increase in the expence of a law-fuit, might be rendered fully fufficient for defraying the whole expence of juffice. By not being paid to the judges till the procefs was determined, they might be fome incitement to the diligence of the court in examining and deciding it. In courts which confifted of a confiderable number of judges, by proportioning the fhare of each judge to the number of hours and days which he had employed in examining the process, either in the court or in a committee by order of the court, those fees might give fome encouragement to the diligence of each particular judge. Public fervices are never better performed than when their reward comes only in confequence of their being performed, and is proportioned to the diligence employed in performing them. In the different parliaments of France, the fees of court (called Epicès and vacations) conflitute the far greater part of the emoluments of the judges. After all deductions are made, the neat falary paid by the crown to a counfellor or judge in the parliament of Touloufe, in rank and dignity the fecond

fecond parliament of the kingdom, amounts only to a hundred and fifty livres, about fix pounds eleven fhillings fterling a year. About feven years ago that fum was in the fame place the ordinary yearly wages of a common footman. The diffribution of those Epices too is according to the diligence of the judges. A diligent judge gains a comfortable, though moderate, revenue by his office: An idle one gets little more than his falary. Those parliaments are perhaps, in many respects, not very convenient courts of justice; but they have never been accused; they feem never even to have been sufficed of corruption.

THE fees of court feem originally to have been the principal fupport of the different courts of justice in England. Each court endeavoured to draw to itfelf as much bufinefs as it could, and was, upon that account, willing to take cognizance of many fuits which were not originally intended to fall under its jurifdiction. The court of king's bench, inftituted for the trial of criminal caufes only, took cognizance of civil fuits; the plaintiff pretending that the defendant, in not doing him justice, had been guilty of fome trespass or mildemeanor. The court of exchequer, inftituted for the levying of the king's revenue, and for enforcing the payment of fuch debts only as were due to the king, took cognizance of all other contract debts; the plaintiff alledging that he could not pay the king, because the defendant would not pay him. In consequence of such fictions it came, in many cafes, to depend altogether upon the parties before what court they would chufe to have their caufe tried; and each court endeavoured, by fuperior difpatch and impartiality, to draw to itfelf as many caufes as it could. The prefent admirable conflitution of the courts of justice in England was, perhaps, originally in a great measure, formed by this emulation, which anciently took place between their respective judges; each judge endeavouring to give, in his own court, the fpeediest and most effectual

328

ВООК

effectual remedy, which the law would admit, for every fort of injuftice. Originally the courts of law gave damages only for breach of contract. The court of chancery, as a court of confcience, first took upon it to enforce the specific performance of agreements. When the breach of contract confifted in the non-payment of money, the damage fuftained could be compenfated in no other way than by ordering payment, which was equivalent to a fpecific performance of the agreement. In fuch cafes, therefore, the remedy of the courts of law was fufficient. It was not fo in others. When the tenant fued his lord for having unjuftly outed him of his leafe, the damages which he recovered were by no means equivalent to the poffession of the land. Such causes, therefore, for some time, went all to the court of chancery, to the no fmall lofs of the courts It was to draw back fuch caufes to themfelves that the of law. courts of law are faid to have invented the artificial and fictitious writ of ejectment, the most effectual remedy for an unjust outer or disposfeffion of land.

A STAMP-DUTY upon the law proceedings of each particular court, to be levied by that court, and applied towards the maintenance of the judges and other officers belonging to it, might, in the fame manner, afford a revenue fufficient for defraying the expence of the administration of justice, without bringing any burden upon the general revenue of the fociety. The judges indeed might, in this cafe, be under the temptation of multiplying unneceffarily the proceedings upon every caufe, in order to increafe, as much as possible, the produce of fuch a stamp-duty. It has been the cuftom in modern Europe to regulate, upon most occasions, the payment of the attornies and clerks of court, according to the number of pages which they had occafion to write; the court, however, requiring that each page fhould contain fo many lines, and each line fo many words. In order to increase their payment, the VOL. II. Un attornies

329

BOOK V. attornies and clerks have contrived to multiply words beyond all neceffity, to the corruption of the law language of, I believe, every court of juffice in Europe. A like temptation might perhaps occafion a like corruption in the form of law proceedings.

> BUT whether the administration of justice be fo contrived as to defray its own expence, or whether the judges be maintained by fixed falaries paid to them from fome other fund, it does not feem neceffary that the perfon or perfons entrusted with the executive power fhould be charged with the management of that fund, or with the payment of those falaries. That fund might arise from the rent of landed estates, the management of each estate being entrusted to the particular court which was to be maintained by it. That fund might arife even from the interest of a sum of money, the lending out of which might, in the fame manner, be entrusted to the court which was to be maintained by it. A part, though indeed but a finall part, of the falary of the judges of the court of feffion in Scotland, arifes from the interest of a fum of money. The neceffary inftability of fuch a fund feems, however, to render it an improper one for the maintenance of an inflitution which ought to last forever.

> THE feparation of the judicial from the executive power feems originally to have arifen from the increasing business of the fociety, in confequence of its increasing improvement. The administration of justice became to laborious and fo complicated a duty as to require the undivided attention of the perfons to whom it was entrusted. The perfon entrusted with the executive power, not having leifure to attend to the decision of private causes himfelf, a deputy was appointed to decide them in his stead. In the progress of the Roman greatness, the conful was too much occupied with the political affairs of the state, to attend to the administration of justice. A præ-

A prætor, therefore, was appointed to administer it in his stead. In the progress of the European monarchies which were founded upon the ruins of the Roman empire, the sovereigns and the great lords came universally to confider the administration of justice as an office, both too laborious and too ignoble, for them to execute in their own perfons. They universally, therefore, discharged themselves of it by appointing a deputy, bailiff, or judge.

WHEN the judicial is united to the executive power, it is fcarce poffible that juffice fhould not frequently be facrificed to, what is vulgarly called, politics. The perfons entrufted with the great interefts of the flate may, even without any corrupt views, fometimes imagine it neceffary to facrifice to thole interefts the rights of a private man. But upon the impartial adminifiration of juffice depends the liberty of every individual, the fenfe which he has of his own fecurity. In order to make every individual feel himfelf perfectly fecure in the poffeffion of every right which belongs to him, it is not only neceffary that the judicial fhould be feparated from the executive power, but that it fhould be rendered as much as poffible independent of that power. The judge fhould not be liable to be removed from his office according to the caprice of that power. The regular payment of his falary fhould not depend upon the good-will, or even upon the good œconomy of that power.

### PART III.

## Of the Expence of public Works and public Institutions.

THE third and laft duty of the fovereign or commonwealth is that of erecting and maintaining those public inflitutions and those public works, which, though they may be in the highest degree advantageous to a great fociety, are, however, of fuch a U u 2 nature, 331

BOOK N. nature, that the profit could never repay the expence to any individual or fmall number of individuals, and which it, therefore, cannot be expected that any individual or fmall number of individuals fhould erect or maintain. The performance of this duty requires too very different degrees of expence in the different periods of fociety.

> AFTER the publick inflitutions and publick works neceffary for the defence of the fociety, and for the administration of justice, both of which have already been mentioned, the other works and inflitutions of this kind are chiefly those for facilitating the commerce of the fociety, and those for promoting the inflruction of the people. The inflitutions for inflruction are of two kinds; those for the education of the youth, and those for the inflruction of people of all ages. The confideration of the manner in which the expence of those different forts of publick works and inflitutions may be most properly defrayed, will divide this third part of the prefent chapter into three different articles.

## ARTICLE I.

# Of the publick Works and Institutions for facilitating the Commerce of the Society.

THAT the erection and maintenance of the publick works which facilitate the commerce of any country, fuch as good roads, bridges, navigable canals, harbours, &c. muft require very different degrees of expence in the different periods of fociety, is evident without any proof. The expence of making and maintaining the publick roads of any country muft evidently increafe with the annual produce of the land and labour of that country, or with the quantity and weight of the goods which it becomes neceffary to fetch and carry upon thofe roads. The ftrength of a bridge muft be fuited to the number and weight of the carriages, which are likely to pafs over it. The depth and the fupply of water for a navigable canal muft be proportioned to the number and tunnage of the lighters, which are likely to carry goods

goods upon it; the extent of a harbour to the number of the fhipping which are likely to take fhelter in it.

IT does not feem neceffary that the expence of those publick works fhould be defrayed from that publick revenue, as it is commonly called, of which the collection and application is in most countries afligned to the executive power. The greater part of fuch publick works may eafily be formanaged, as to afford a particular revenue fufficient for defraying their own expence, without bringing any burden upon the general revenue of the fociety.

A HIGHWAY, a bridge, a navigable canal, for example, may in moft cafes be both made and maintained by a fmall toll upon the carriages which make ufe of them: a harbour, by a moderate port duty upon the tunnage of the fhipping which load or unload in it. The coinage, another inftitution for facilitating commerce, in many countries, not only defrays its own expence, but affords a fmall revenue or feignorage to the fovereign. The poft office, another inftitution for the fame purpofe, over and above defraying its own expence, affords in almoft all countries a very confiderable revenue to the fovereign.

WHEN the carriages which pafs over a highway or a bridge, and the lighters which fail upon a navigable canal, pay toll in proportion to their weight or their tunnage, they pay for the maintenance of thofe publick works exactly in proportion to the wear and tear which they occasion of them. It feems fearce possible to invent a more equitable way of maintaining fuch works. This tax or toll too, though it is advanced by the carrier, is finally paid by the confumer, to whom it must always be charged in the price of the goods. As the expence of carriage, however, is very much reduced by means of fuch publick works, the goods, notwithstanding the toll, come cheaper. to

to the confumer than they could otherwife have done; their price not being fo much raifed by the toll, as it is lowered by the cheapnefs of the carriage. The perfon who finally pays this tax, therefore, gains by the application, more than he lofes by the payment of it. His payment is exactly in proportion to his gain. It is in reality no more than a part of that gain which he is obliged to give up in order to get the reft. It feems impoffible to imagine a more equitable method of raifing a tax.

WHEN the toll upon carriages of luxury, upon coaches, poftchaifes, &c. is made fomewhat higher in proportion to their weight, than upon carriages of neceffary ufe, fuch as carts, waggons, &c. the indolence and vanity of the rich is made to contribute in a very eafy manner to the relief of the poor, by rendering cheaper the tranfportation of heavy goods to all the different parts of the country.

WHEN high roads, bridges, canals, &c. are in this manner made and fupported by the commerce which is carried on by means of them, they can be made only where that commerce requires them, and confequently where it is proper to make them. Their expence too, their grandeur and magnificence, must be fuited to what that commerce can afford to pay. They must be made confequently as it is proper to make them. A magnificent high road cannot be made through a defart country where there is little or no commerce, or merely becaufe it happens to lead to the country villa of the intendant of the province, or to that of fome great lord to whom the intendant finds it convenient to make his court. A great bridge cannot be thrown over a river at a place where nobody paffes, or merely to embellish the view from the windows of a neighbouring palace: things which fometimes happen, in countries where works of this kind are carried on by any other revenue, than that which they themfelves are capable of affording.

BOOK

IN

In feveral different parts of Europe the toll or lock-duty upon a canal is the property of private perfons, whole private intereft obliges them to keep up the canal. If it is not kept in tolerable order, the navigation neceffarily ceafes altogether, and along with it the whole profit which they can make by the tolls. If those tolls were put under the management of commissioners, who had themfelves no intereft in them, they might be lefs attentive to the maintenance of the works which produced them. The canal of Languedoc coft the king of France and the province upwards of thirteen millions of livres, which (at twenty-eight livres the mark of filver, the value of French money in the end of the last century) amounted to upwards of nine hundred thousand pounds sterling. When that great work was finished, the most likely method, it was found, of keeping it in conftant repair was to make a prefent of the tolls to Riquet the engineer, who planned and conducted the work. Thofe tolls conftitute at prefent a very large eftate to the different branches of the family of that gentleman, who have, therefore, a great interest to keep the work in conftant repair. But had those tolls been put under the management of commissioners, who had no fuch interest, they might perhaps have been diffipated in ornamental and unneceffary expences, while the most effential parts of the work were allowed to go to ruin.

THE tolls for the maintenance of a high road, cannot with any fafety be made the property of private perfons. A high road, though entirely neglected, does not become altogether impaffable, though a canal does. The proprietors of the tolls upon a high road, therefore, might neglect altogether the repair of the road, and yet continue to levy very nearly the fame tolls. It is proper, therefore, that the tolls for the maintenance of fuch a work fhould be put under the management of commiffioners or truftees.

5

IN

336

BOOK

In Great Britain, the abufes which the truftees have committed in the management of those tolls, have in many cafes been very juftly complained of. At many turnpikes, it has been faid, the money levied is more than double of what is necessary for executing, in the compleatest manner, the work which is often executed in a very flovenly manner, and fometimes not executed at all. The fystem of repairing the high roads by tolls of this kind, it must be observed, is not of very long standing. We should not wonder, therefore, if it has not yet been brought to that degree of perfection of which it feems capable. If mean and improper perfons are frequently appointed truftees; and if proper courts of infpection and account have not yet been established for controuling their conduct, and for reducing the tolls to what is barely fufficient for executing the work to be done by them; the recency of the inflitution both accounts and apologizes for those defects, of which, by the wildom of parliament, the greater part may in due time be gradually remedied.

The money levied at the different turnpikes in Great Britain is fuppoled to exceed fo much what is neceffary for repairing the roads, that the favings, which with proper occonomy might be made from it, have been confidered, even by fome minifters, as a very great refource which might at fome time or another be applied to the exigencies of the flate. Government, it has been faid, by taking the management of the turnpikes into its own hands, and by employing the foldiers, who would work for a very fmall addition to their pay, could keep the roads in good order at a much lefs expence than it can be done by truftees, who have no other workmen to employ, but fuch as derive their whole fubfiftence from their wages. A great revenue, half a million perhaps, it has been pretended, might in this manner be gained without laying any new burden upon the people; and the turnpike pike roads might be made to contribute to the general expence of the C H A P. ftate, in the fame manner as the post-office does at prefent.

THAT a confiderable revenue might be gained in this manner, I have no doubt, though probably not near fo much, as the projectors of this plan have fuppofed. The plan itfelf, however, feems liable to feveral very important objections.

FIRST, if the tolls which are levied at the turnpikes should ever be confidered as one of the refources for fupplying the exigencies of the flate, they would certainly be augmented as those exigencies were supposed to require. According to the policy of Great Britain, therefore, they would probably be augmented very The facility with which a great revenue could be drawn fast. from them, would probably encourage administration to recur very frequently to this refource. Though it may, perhaps, be more than doubtful, whether half a million could by any oeconomy be faved out of the prefent tolls, it can fcarce be doubted but that a million might be faved out of them, if they were doubled; and perhaps two millions, if they were tripled. This great revenue too might be levied without the appointment of a fingle new officer to collect and receive it. But the turnpike tolls being continually augmented in this manner, inflead of facilitating the inland commerce of the country, as at prefent, would foon become a very great incumbrance upon it. The expence of tranfporting all heavy goods from one part of the country to another would foon be fo much increased, the market for all fuch goods, confequently, would foon be fo much narrowed; that their production would be in a great measure discouraged, and the most important branches of the domeftic industry of the country annihilated altogether.

Хх

SECONDLY,

BOOK V.

-----

SECONDLY, a tax upon carriages in proportion to their weight, though a very equal tax when applied to the fole purpose of repairing the roads, is a very unequal one, when applied to any other purpofe, or to fupply the common exigencies of the flate. When it is applied to the fole purpose above mentioned, each carriage is fuppofed to pay exactly for the wear and tear which that carriage occasions of the roads. But when it is applied to any other purpofe, each carriage is fuppofed to pay for more than that wear and tear, and contributes to the fupply of fome other exigency of the flate. But as the turnpike toll raifes the price of goods in proportion to their weight, and not to their value, it is chiefly paid by the confumers of coarfe and bulky, not by those of precious and light commodities. Whatever exigency of the flate therefore this tax might be intended to fupply, that exigency would be chiefly fupplied at the expence of the poor, not of the rich; at the expenceof those who are least able to supply it, not of those who are most able,

THERLY, if government fhould at any time neglect the reparation of the high roads, it would be fiill more difficult, than it is at prefent, to compel the proper application of any part of the turnpike tolls. A large revenue might thus be levied upon the people, without any part of it being applied to the only purpofe, to which a revenue levied in this manner ought ever to be applied. If the meannefs and poverty of the truftees of turnpike roads render w it fometimes difficult at prefent to oblige them to repair their wrong ; their wealth and greatnefs would render it ten times more fo in the eafe which is here fuppofed.

IN France, the funds deftined for the reparation of the highroads are under the immediate direction of the executive power. Those funds confist, partly in a certain number of days labour which, the country people are in most parts of Europe obliged to give to therepa-

reparation of the highways; and partly in fuch a portion of the ge- C H A P. neral revenue of the ftate as the king chufes to fpare from his other expences.

By the antient law of France, as well as by that of most other parts of Europe, the labour of the country people was under the direction of a local or provincial magistracy, which had no immediate dependency upon the king's council. But by the prefent practice both the labour of the country people, and whatever other fund the king may chufe to affign for the reparation of the high roads in any particular province or generality, are entirely under the management of the intendant; an officer who is appointed and removed by the king's council, who receives his orders from it, and is in conftant correfpondence with it. In the progrefs of defpotifm the authority of the executive power gradually abforbs that of every other power in the ftate, and affumes to itfelf the management of every branch of revenue which is deflined for any public purpofe. In France, however, the great post roads, the roads which make the communication between the principal towns of the kingdom, are in general kept in good order; and in fome provinces are even a good deal fuperior to the greater part of the turnpike roads of England. But what we call the crofs roads, that is, the far greater part of the roads in the country, are entirely neglected, and are in many places abfolutely impaffable for any heavy carriage. In fome places it is even dangerous to travel on horfeback, and mules are the only conveyance which can fafely be trufted. The proud minister of an oftentatious court may frequently take pleafure in executing a work of fplendor and magnificence, fuch as a great highway which is frequently feen by the principal nobility, whose applauses, not only flatter his vanity, but even contribute to fupport his interest at court. But to execute a great number of little works, in which nothing that can be done can make any great appearance, or excite the smallest degree of admiration in any traveller, and X x 2 which,

BOOK, which, in fhort, have nothing to recommend them but their extreme utility, is a bufinefs which appears in every refpect too mean and paultry to merit the attention of fo great a magiftrate. Under fuch an administration, therefore, fuch works are almost always entirely neglected.

> In China, and in feveral other governments of Afia, the executive power charges itself both with the reparation of the high roads, and with the maintenance of the navigable canals. In the instructions which are given to the governor of each province, those objects, it is faid, are constantly recommended to him, and the judgment which the court forms of his conduct is very much regulated by the attention which he appears to have paid to this part of his inftructions. This branch of public police accordingly is faid to be very much attended to in all those countries, but particularly in China, where the high roads, and fill more the navigable canals, it is pretended, exceed very much every thing of the fame kind which is known in Europe. The accounts of those works, however, which have been transmitted to Europe, have generally been drawn up by weak and wondering travellers; frequently by flupid and lying miffionaries. If they had been examined by more intelligent eyes, and if the accounts of them had been reported by more faithful witneffes, they would not, perhaps, appear to be fo wonderful. The account which Bernier gives of fome works of this kind in Indostan, falls very much thort of what had been reported of them by other travellers, more disposed to the marvellous than he was. It may too, perhaps, be in those countries, as it is in France, where the great roads, the great communications which are likely to be the fubjects of conversation at the court and in the capital, are attended to, and all the reft neglected. In China, befides, in Indostan, and in feveral other governments of Afia, the revenue of the fovereign arifes almost altogether from a land-tax or land-rent, which rifes or falls with

with the rife and fall of the annual produce of the land. The great. CHAP. interest of the sovereign, therefore, his revenue, is in such countries neceffarily and immediately, connected with the cultivation of. the land, with the greatness of its produce, and with the value of its produce. But in order to render that produce both as great and. as valuable as possible, it is necessary to procure to it as extensivea market as possible, and confequently to establish the freest, the eafieft, and the leaft expensive communication between all the different parts of the country; which can be done only by means of the beft roads and the beft navigable canals. But the revenue of the fovereign does not in any part of Europe arife chiefly from. a land-tax or land-rent. In all the great kingdoms of Europe, perhaps, the greater part of it may ultimately depend upon the produce of the land : But that dependency is neither fo immediate, nor so evident. In Europe, therefore, the fovereign does not feel himfelf fo directly called upon to promote the increase, both in quantity and value; of the produce of the land, or, by maintaining good roads and canals, to provide the most extensive market for that produce. Though it should be true, therefore, what Iapprehend is not a little doubtful, that in fome parts of Afia this. department of the public police is very properly managed by the executive power, there is not the least probability that, during the prefent flate of things, it could be tolerably managed by that power. in any part of Europe.

EVEN those public works which are of fuch a nature that they cannot afford any revenue for maintaining themselves, but of which the conveniency is nearly confined to fome particular place or diffrict, are always better maintained by a local or provincial revenue, under the management of a local and provincial adminifiration, than by the general revenue of the flate, of which the executive power must always have the management. Were the fireets-

fireets of London to be lighted and paved at the expence of the treafury, is there any probability that they would be fo well lighted and paved as they are at prefent, or even at fo fmall an expence? The expence, befides, inftead of being raifed by a local tax upon the inhabitants of each particular fireet, parifh, or diffrict in London, would, in this cafe, be defrayed out of the general revenue of the fiate, and would confequently be raifed by a tax upon all the inhabitants of the kingdom, of whom the greater part derive no fort of benefit from the lighting and paving of the fireets of London.

THE abuses which sometimes creep into the local and provincial administration of a local and provincial revenue, how enormous foever they may appear, are in reality, however, almost always very triffing, in comparison of those which commonly take place in the administration and expenditure of the revenue of a great empire. They are, befides, much more eafily corrected. Under the local or provincial administration of the justices of the peace in Great Britain, the fix days labour which the country people are obliged to give to the reparation of the high ways, is not always perhaps very judiciously applied, but it is fcarce ever exacted with any circumstance of cruelty or oppression. In France, under the administration of the intendants, the application is not always more judicious, and the exaction is frequently the most cruel and oppreffive. Such Corvées, as they are called, make one of the principal inftruments of tyranny by which those officers chastife any parish or communeauté which has had the misfortune to fall under their difpleafure.

## ARTICLE II.

# Of the Expence of the Institutions for the Education of Youth.

THE inflitutions for the education of the youth may, in the fame manner, furnish a revenue sufficient for defraying their own expence,

342

LOOK

the second

expence. The fee or honorary which the fcholar pays to the mafter C H A P. naturally conflitutes a revenue of this kind.

EVEN where the reward of the mafter does not arife altogetherfrom this natural revenue, it fill is not neceffary that it fhould be derived from that general revenue of the fociety, of which the collection and application is, in most countries, affigned to the executive power. Through the greater part of Europe accordingly the endowment of fchools and colleges makes either no charge upon that general revenue, or but a very finall one. It every where arifes chiefly from fome local or provincial revenue, from the rent of fome landed eftate, or from the interest of fome fum of money allotted and put under the management of truftees for this particular purpofe, fometimes by the fovereign himfelf, and fometimes by fome private donor.

HAVE those public endowments contributed in general to promote the end of their inflitution? Have they contributed to encourage the diligence, and to improve the abilities of the teachers? Have they directed the course of education towards objects more useful, both to the individual and to the public, than those to which, it would naturally have gone of its own accord? It should not feem very difficult to give at least a probable answer to each of those questions.

In every profession, the exertion of the greater part of those who exercise it is always in proportion to the necessity they are under of making that exertion. This necessity is greates with those to whom the emoluments of their profession are the only fource from which they expect their fortune, or even their ordinary revenue and subfissence. In order to acquire this fortune, or even to get this subfissence, they must, in the course of a year, execute a certain . quantity.

344

BOOK quantity of work of a known value; and, where the competition is free, the rivalship of competitors, who are all endeavouring to justle one another out of employment, obliges every man to endeavour to execute his work with a certain degree of exactness. The greatness of the objects which are to be acquired by fuccess in some particular professions may, no doubt, fometimes animate the exertion of a few men of extraordinary spirit and ambition. Great objects, however, are evidently not necessary in order to occasion the greateft exertions. Rivalfhip and emulation render excellency, even in mean professions, an object of ambition, and frequently occasion the very greatest exertions. Great objects, on the contrary, alone and unfupported by the necessity of application, have feldom been fufficient to occafion any confiderable exertion. In England, fuccefs in the profession of the law leads to some very great objects of ambition; and yet how few men, born to eafy fortunes, have ever in this country been eminent in that profeffion !

> THE endowments of schools and colleges have necessarily diminished more or less the necessity of application in the teachers. Their sublissence, so far as it arises from their falaries, is evidently derived from a fund altogether independent of their fuccefs and reputation in their particular professions.

> In fome univerfities the falary makes but a part, and frequently but a fmall part of the emoluments of the teacher, of which the greater part arifes from the honoraries or fees of his pupils. The neceffity of application, though always more or lefs diminished, is not in this cafe entirely taken away. Reputation in his profession is still of some importance to him, and he still has some dependency upon the affection, gratitude, and favourable report of those who have attended upon his instructions; and these favourable fenti-8

ments

ments he is likely to gain in no way fo well as by deferving them, that is, by the abilities and diligence with which he difcharges every part of his duty.

In other univerfities the teacher is prohibited from receiving any honorary or fee from his pupils, and his falary conflitutes the whole of the revenue which he derives from his office. His intereft is, in this cafe, fet as directly in oppofition to his duty as it is poffible to fet it. It is the intereft of every man to live as much at his cafe as he can; and if his emoluments are to be precifely the fame whether he does, or does not perform fome very laborious duty, it is certainly his intereft, at leaft as intereft is vulgarly underftood, either to neglect it altogether, or, if he is fubject to fome authority which will not fuffer him to do this, to perform it in as carelefs and flovenly a manner as that authority will permit. If he is naturally active and a lover of labour, it is his intereft to employ that activity in any way, from which he can derive fome advantage, rather than in the performance of his duty, from which he can derive none.

IF the authority to which he is fubject refides in the body corporate, the college, or univerfity, of which he himfelf is a member, and in which the greater part of the other members are, like himfelf, perfons who either are, or ought to be teachers; they are likely to make a common caufe, to be all very indulgent to one another, and every man to confent that his neighbour may neglect his duty, provided he himfelf is allowed to neglect his own. In the univerfity of Oxford, the greater part of the public profeffors have, for thefe many years, given up altogether even the pretence of teaching.

IF the authority to which he is fubject refides, not fo much in the body corporate of which he is a member, as in fome other extra-Vol. II. Yy neous 345

BOOK. neous perfons, in the bishop of the diocese, for example; in the governor of the province; or, perhaps, in fome minister of state; it is not indeed in this cafe very likely that he will be fuffered to neglect his duty altogether. All that fuch fuperiors, however, can force him to do, is to attend upon his pupils a certain number of hours, that is, to give a certain number of lectures in the week or in the year. What those lectures shall be, must still depend upon the diligence of the teacher; and that diligence is likely to be proportioned to the motives which he has for exerting it. An extraneous jurifdiction of this kind, befides, is liable to be exercifed both ignorantly and capricioufly. In its nature it is arbitrary and diferetionary, and the perfons who exercise it, neither attending upon the lectures of the teacher themfelves, nor perhaps underftanding the fciences which it is his bufiness to teach, are feldom capable of exercifing it with judgment. From the infolence of office too they are frequently indifferent how they exercise it, and are very apt to cenfure or deprive him of his office wantonly, and without any just caufe. The perfon fubject to fuch jurifdiction is neceffarily degraded by it, and, inftead of being one of the most respectable, is rendered one of the meaneft and most contemptible perfons in the fociety. It is by powerful protection only that he can effectually guard himfelf against the bad usage to which he is at all times exposed; and this protection he is most likely to gain, not by ability or diligence in his profession, but by obsequiousnels to the will of his superiors, and by being ready, at all times, to facrifice to that will the rights, the intereft, and the honour of the body corporate of which he is a member. Whoever has attended for any confiderable time to the administration of a French university, must have had occasion to remark the effects which naturally refult from an arbitrary and extraneous jurifdiction of this kind.

> WHATEVER forces a certain number of fludents to any college or university, independent of the merit or reputation of the teachers, tends

tends more or lefs to diminish the necessity of that merit or reputation.

THE privileges of graduates in arts, in law, in phyfic and divinity, when they can be obtained only by refiding a certain number of years in certain universities, necessarily force a certain number of students to such universities, independent of the merit or reputation of the teachers. The privileges of graduates are a fort of statutes of apprentices, which have contributed to the improvement of education, just as the other statutes of apprentices of apprentices.

THE charitable foundations of fcholarfhips, exhibitions, burfaries, &c. neceffarily attach a certain number of ftudents to certain colleges, independent altogether of the merit of thofe particular colleges. Were the ftudents upon fuch charitable foundations left free to chufe what college they liked beft, fuch liberty might perhaps contribute to excite fome emulation among different colleges. A regulation, on the contrary, which prohibited even the independent members of every particular college from leaving it, and going to any other, without leave first afked and obtained of that which they meant to abandon, would tend very much to extinguish that emulation.

IF in each college the tutor or teacher who was to inftruct each fludent in all arts and fciences, fhould not be voluntarily chofen by the fludent, but appointed by the head of the college; and if, in cafe of neglect, inability, or bad ufage, the fludent fhould not be allowed to change him for another, without leave first asked and obtained; fuch a regulation would not only tend very much to extinguish all emulation among the different tutors of the Y y 2 fame

fame college, but to diminish very much in all of them the necceffity of diligence and of attention to their respective pupils. Such teachers, though very well paid by their fludents, might be as much disposed to neglect them, as those who are not paid by them at all, or who have no other recompence but their falary.

IF the teacher happens to be a man of fense, it must be an unpleafant thing to him to be confcious, while he is lecturing his fludents, that he is either speaking or reading nonfense, or what is very little better than nonfense. It must too be unpleasant to him to observe that the greater part of his students defert his lectures; or perhaps attend upon them with plain enough marks of neglect, contempt, and derifion. If he is obliged, therefore, to give a certain number of lectures, thefe motives alone, without any other interest, might dispose him to take some pains to give tolerably good ones. Several different expedients, however, may be fallen upon which will effectually blunt the edge of all those incitements The teacher, inftead of explaining to his pupils to diligence. himfelf, the fcience in which he proposes to instruct them, may read fome book upon it; and if this book is written in a foreign and dead language, by interpreting it to them into their own; or, what would give him fill lefs trouble, by making them interpret it to him, and by now and then making an occafional remark upon it, he may flatter himself that he is giving a lecture. The flighteft degree of knowledge and application will enable him to do this without exposing himself to contempt or derision, or faying any thing that is really foolifh, abfurd, or ridiculous. The difcipline of the college, at the fame time, may enable him to force all his pupils to the most regular attendance upon this sham-lecture, and to maintain the most decent and respectful behaviour during the whole time of the performance.

THE

348

воок

THE discipline of colleges and universities is in general contrived, CHAP. not for the benefit of the fludents, but for the interest, or more properly fpeaking, for the ease of the masters. Its object is, in all cafes, to maintain the authority of the mafter, and whether he neglects or performs his duty, to oblige the fludents in all cafes to behave to him as if he performed it with the greatest diligence and ability. It feems to prefume perfect wifdom and virtue in the one order, and the greateft weakness and folly in the other. Where the mafters, however, really perform their duty, there are no examples, I. believe, that the greater part of the fludents ever neglect theirs. No discipline is ever requisite to force attendance upon lectures which are really worth the attending, as is well known where-ever any fuch lectures are given. Force and reftraint may, no doubt, be in some degree requifite in order to oblige children, or very young boys, to attend to those parts of education which it is thought necessary for them to acquire during that early period of life; but after twelve or thirteen years of age, provided the mafter does his duty, force or reftraint can fcarce ever be neceffary to carry on any part of education. Such is the generofity of the greater part of young men, that, fo far from being disposed to neglect or despise the instructions of their master, provided he shows some ferious intention of being of use to them, they are generally inclined to pardon a great deal of incorrectness in the performance of his duty, and fometimes even to conceal from the publick a good deal of groß negligence.

THOSE parts of education, it is to be obferved, for the teaching of which there are no publick inflitutions, are generally the beft taught. When a young man goes to a fencing or a dancing fchool, he does not, indeed, always learn to fence or to dance very well; but he feldom fails of learning to fence or to dance. The good effects of the riding fchool are not commonly fo evident. The expence of a riding

riding fchool is fo great, that in most places it is a publick inflitution. The three most effential parts of literary education, to read, write, and account, it still continues to be more common to acquire in private than in publick schools; and it very feldom happens that any body fails of acquiring them to the degree in which it is neceffary to acquire them.

In England the publick fchools are much lefs corrupted than the univerfities. In the fchools the youth are taught, or at leaft may be taught, Greek and Latin, that is, every thing which the mafters pretend to teach, or which, it is expected, they fhould teach. In the univerfities the youth neither are taught, nor always can find any proper means of being taught, the fciences, which it is the bufinefs of those incorporated bodies to teach. The reward of the fchoolmafter in most cafes depends principally, in fome cafes almost entirely, upon the fees or honoraries of his fcholars. Schools have no exclusive privileges. In order to obtain the honours of graduation, it is not neceffary that a perfon fhould bring a certificate of his having fludied a certain number of years at a publick fchool. If upon examination he appears to underfland what is taught there, no queftions are afked about the place where he learnt it.

THE parts of education which are commonly taught in univerfities, it may, perhaps, be faid are not very well taught. But had it not been for those inflitutions they would not have been commonly taught at all, and both the individual and the publick would have fuffered a good deal from the want of those important parts of education.

THE prefent univerfities of Europe were originally, the greater part of them, ecclefiaftical corporations; inflituted for the education of churchmen. They were founded by the authority of the pope,

350

ВООК

pope, and were fo entirely under his immediate protection, that their C H A P. members, whether mafters or fludents, had all of them what was then called the benefit of the elergy, that is, were exempted from the civil jurifdiction of the countries in which their refpective univerfities were fituated, and were amenable only to the ecclefiaftical tribunals. What was taught in the greater part of those univerfities was, fuitable to the end of their inflitution, either theology, or fomething that was merely preparatory to theology.

WHEN christianity was first established by law, a corrupted latin had become the common language of all the western parts of Europe. The fervice of the church accordingly, and the tranflation of the Bible which was read in churches, were both in that corrupted latin, that is, in the common language of the country. After the irruption of the barbarous nations who overturned the Roman empire, latin gradually ceafed to be the language of any part of Europe. But the reverence of the people naturally preferves the established forms and ceremonies of religion, long after the circumflances which first introduced and rendered them reasonable are no more. Though latin, therefore, was no longer underflood any where by the great body of the people, the whole fervice of the church still continued to be performed in that language. Two different languages were thus established in Europe, in the fame manner as in antient Egypt; a language of the priefts, and a language of the people; a facred and a profane; a learned and an unlearned language. But it was necessary that the priests should understand fomething of that facred and learned language in which they were to officiate; and the fludy of the latin language therefore made, from the beginning, an effential part of university education.

IT was not fo with that either of the Greek, or of the Hebrew language. The infallible decrees of the church had pronounced the

4

BOOK the latin translation of the Bible, commonly called the Latin Vulgate, to have been equally dictated by divine infpiration, and therefore of equal authority with the Greek and Hebrew originals. The knowledge of those two languages, therefore, not being indispenfably requifite to a churchman, the fludy of them did not for a long time make a neceffary part of the common course of university education. There are fome Spanish universities, I am assured, in which the fludy of the Greek language has never yet made any part of that courfe. The first reformers found the Greek text of the new testament, and even the Hebrew text of the old, more favourable to their opinions than the vulgate translation, which, as might naturally be fuppofed, had been gradually accommodated to fupport the doctrines of the catholick church. They fet themfelves, therefore, to expose the many errors of that translation, which the Roman catholick clergy were thus put under the neceffity of defending or explaining. But this could not well be done without fome knowledge of the original languages, of which the fludy was therefore gradually introduced into the greater part of univerfities; both of those which embraced, and of those which rejected, the doctrines of the reformation. The Greek language was connected with every part of that claffical learnning, which, though at first principally cultivated by catholicks and Italians, happened to come into fashion much about the fame time that the doctrines of the reformation were fet on foot. In the greater part of universities, therefore, that language was taught previous to the fludy of philosophy, and as foon as the fludent had made fome progrefs in the latin. The Hebrew language having no connection with claffical learning, and, except the holy feriptures, being the language of not a fingle book in any efteem, the fludy of it did not commonly commence till after that of philofophy, and when the fludent had entered upon the fludy of theology.

ORIGINALLY

ORIGINALLY the first rudiments both of the Greek and Latin languages were taught in universities, and in some universities they still continue to be so. In others it is expected that the student should have previously acquired at least the rudiments of one or both of those languages, of which the study continues to make every where a very considerable part of university education.

THE antient Greek philosophy was divided into three great branches; physics, or natural philosophy; ethics, or moral philofophy; and logic. This general division feems perfectly agreeable to the nature of things.

THE great phenomena of nature, the revolutions of the heavenly bodies, eclipfes, comets; thunder, lightning, and other extraordinary meteors; the generation, the life, growth, and diffolution of plants and animals; are objects which, as they neceffarily excite the wonder, fo they naturally call forth the curiofity of mankind to enquire into their caufes. Superflition first attempted to fatisfy this curiofity by referring all those wonderful appearances to the immediate agency of the gods. Philosophy afterwards endeavoured to account for them, from more familiar caufes, or from fuch as mankind were better acquainted with, than the agency of the gods. As those great phenomena are the first objects of human curiofity, fo the fcience which pretends to explain them must naturally have been the first branch of philosophy that was cultivated. The first philosophers, accordingly, of whom hiftory has preferved any account, appear to have been natural philofophers.

IN every age and country of the world men muft have attended to the characters, defigns, and actions of one another, and many reputable rules and maxims for the conduct of human life, muft have been laid down and approved of by common confent. As VOL. II. Zz foon

CHAP.

354

BOOK

foon as writing came into fashion, wife men, or those who fancied themfelves fuch, would naturally endeavour to increase the number of those established and respected maxims, and to express their own fenfe of what was either proper or improper conduct, fometimes in the more artificial form of apologues, like what are called the fables of Æfop; and fometimes in the more fimple one of apophthegms, or wife fayings, like the Proverbs of Solomon, the verfes of Theognis and Phocyllides, and fome part of the works of Hefiod. They might continue in this manner for a long time merely to multiply the number of those maxims of prudence and morality, without even attempting to arrange them in any very diffinct or methodical order, much less to connect them together by one or more general principles, from which they were all deducible, like effects from their natural caufes. The beauty of a fystematical arrangement of different observations connected by a few common principles, was first feen in the rude effays of those antient times towards a fystem of natural philosophy. Something of the fame kind was afterwards attempted in morals. The maxims of common life were arranged in fome methodical order, and connected together by a few common principles, in the fame manner as they had attempted to arrange and connect the phenomena of nature. The fcience which pretends to inveftigate and explain those connecting principles, is what is properly called moral philofophy.

DIFFERENT authors gave different fystems both of natural and moral philosophy. But the arguments by which they supported those different fystems, far from being always demonstrations, were frequently at beft but very flender probabilities, and fometimes mere fophifms, which had no other foundation but the inaccuracy and ambiguity of common language. Speculative fyftems have in all ages of the world been adopted for reafons too frivolous to have determined the judgment of any man of common fense, in a matter

a matter of the smallest pecuniary interest. Gross sophistry has CHAP. fearce ever had any influence upon the opinions of mankind, except in matters of philosophy and speculation; and in these it has frequently had the greateft. The patrons of each fystem of natural and moral philosophy naturally endeavoured to expose the weakness of the arguments adduced to fupport the fyftems which were opposite to their own. In examining those arguments, they were neceffarily led to confider the difference between a probable and a demonstrative argument, between a fallacious and a conclusive one; and Logic, or the science of the general principles of good and bad reafoning, neceffarily arofe out of the obfervations which a fcrutiny of this kind gave occasion to. Though in its origin posterior both to phyfics and to ethics, it was commonly taught, not indeed in all, but in the greater part of the antient fchools of philosophy, previoully to either of those sciences. The fludent, it feems to have been thought, ought to underftand well the difference between good and bad reafoning, before he was led to reafon upon fubjects of fo great importance.

THIS antient division of philosophy into three parts was in the greater part of the universities of Europe, changed for another into five.

In the antient philosophy, whatever was taught concerning the nature either of the human mind or of the Deity, made a part of the fystem of physics. Those beings, in whatever their effence might be supposed to confist, were parts of the great soft the universe, and parts too productive of the most important effects. Whatever human reason could, either conclude, or conjecture concerning them, made, as it were, two chapters, though no doubt two very important ones, of the science which pretended to give an account of the origin and revolutions of the great soft for Z = 2 of

of the universe. But in the universities of Europe, where philofophy was taught only as fubfervient to theology, it was natural to dwell longer upon thefe two chapters than upon any other of the fcience. They were gradually more and more extended, and were divided into many inferior chapters, till at last the dostrine of spirits, of which so little can be known, came to take up as much room in the fystem of philosophy as the doctrine of bodies, of which fo much can be known. The doctrines concerning those two fubjects were confidered as making two diffinct fciences. What are called Metaphyfics or Pneumatics were fet in opposition to Physics, and were cultivated not only as the more fublime, but, for the purpofes of a particular profession, as the more useful science of the two. The proper subject of experiment and observation, a subject in which a careful attention is capable of making fo many ufeful difcoveries, was almost entirely neglected. The fubject in which, after a few very fimple and almost obvious truths, the most careful attention can difcover nothing but obfcurity and uncertainty, and can confequently produce nothing but fubtleties and fophifms, was greatly cultivated.

WHEN those two sciences had thus been set in opposition to one another, the comparison between them naturally gave birth to a third, to what was called Ontology, or the science which treated of the qualities and attributes which were common to both the subjects of the other two sciences. But if subtleties and some composed the greater part of the Metaphysics or Pneumatics of the schools, they composed the whole of this cobweb science of Ontology, which was likewise scalled Metaphysics.

WHEREIN confifted the happiness and perfection of a man, confidered not only as an individual, but as the member of a family, of a state, and of the great fociety of mankind, was the object

356

BOOK

object which the ancient moral philosophy proposed to investigate. C H A P. In that philosophy the duties of human life were treated of as fubfervient to the happiness and perfection of human life. But when moral, as well as natural philosophy, came to be taught only as subfervient to theology, the duties of human life were treated of as chiefly fubfervient to the happiness of a life to come. In the antient philofophy the perfection of virtue was reprefented as neceffarily productive, to the perfon who possessed it, of the most perfect happines in this life. In the modern philosophy it was frequently reprefented. as generally, or rather as almost always inconfistent with any degree of happines in this life; and heaven was to be earned only by penance and mortification, by the aufterities and abasement of a monk; not by the liberal, generous, and fpirited conduct of a man. Cafuiftry and an afcetic morality made up, in most cases, the greater part of the moral philosophy of the schools. By far the most important of all the different branches of philosophy, became in this manner by far the most corrupted.

SUCH, therefore, was the common courfe of philosophical education in the greater part of the universities in Europe. Logic was taught first: Ontology came in the fecond place: Pneumatology, comprehending the doctrine concerning the nature of the human foul and of the Deity, in the third: In the fourth followed a debafed fystem of moral philosophy, which was confidered as immediately connected with the doctrines of Pneumatology, with the immortality of the human foul, and with the rewards and punishments which, from the justice of the Deity, were to be expected in a life to come: A short and superficial system of Physics usually concluded the course.

THE alterations which the universities of Europe thus introduced into the antient course of philosophy, were all meant for the education:

education of ecclefiaflics, and to render it a more proper introduction to the fludy of theology. But the additional quantity of fubtlety and fophiftry; the cafuiflry and the afcetic morality which those alterations introduced into it, certainly did not render it more proper for the education of gentlemen or men of the world, or more likely either to improve the underflanding, or to mend the heart.

THIS courfe of philofophy is what ftill continues to be taught in the greater part of the univerfities of Europe; with more or lefs diligence, according as the conflictution of each particular univerfity happens to render diligence more or lefs neceffary to the teachers. In fome of the richeft and beft endowed univerfities, the tutors content themfelves with teaching a few unconnected fhreds and parcels of this corrupted courfe; and even thefe they commonly teach very negligently and fuperficially.

THE improvements which, in modern times, have been made in feveral different branches of philofophy, have not, the greater part of them, been made in univerfities; though fome no doubt have. The greater part of univerfities have not even been very forward to adopt those improvements, after they were made; and feveral of those learned focieties have chosen to remain, for a long time, the fanctuaries in which exploded fystems and obsolete prejudices found fhelter and protection, after they had been hunted out of every other corner of the world. In general, the richest and best endowed universities have been the flowest in adopting those improvements, and the most averse to permit any confiderable change in the established plan of education. Those improvements were more easily introduced into some of the poorer universities, in which the teachers, depending upon their reputation for the greater part of their substituent, were obliged to pay more attention to the current opinions of the world.

Bur

ВООК

But though the public fchools and univerfities of Europe were originally intended only for the education of a particular profession, that of churchmen; and though they were not always very diligent in inftructing their pupils even in the feiences which were fupposed necessary for that profession, yet they gradually drew to themfelves the education of almost all other people, particularly of almost all gentlemen and men of fortune. No better method, it feems, could be fallen upon of spending, with any advantage, the long interval between infancy and that period of life at which men begin to apply in good earness to the real business of the world, the business which is to employ them during the remainder of their days. The greater part of what is taught in fchools and universities, however, does not feem to be the most proper preparation for that business.

IN England, it becomes every day more and more the cuftom to fend young people to travel in foreign countries immediately upon their leaving fchool, and without fending them to any univerfity. Our young people, it is faid, generally return home much improved by their travels. A young man who goes abroad at feventeen or eighteen, and returns home at one and twenty, returns three or four years older than he was when he went abroad; and at that age it is very difficult not to improve a-good deal in three or four years. In the course of his travels, he generally acquires fome knowledge of one or two foreign languages; a knowledge, however, which is feldom fufficient to enable him eacher to speak or write them with propriety. In other refpects he commonly returns home more conceited, more unprincipled, more diffipated, and more incapable of any ferious application either to fludy or to bufinefs, than he could well have become in fo fliort a time, had he lived at home. By travelling fo very young, by fpending in the most fivolous diffipation the most precious years of his life, at a distance from the inspection

CHAP.

tion and controul of his parents and relations, every ufeful habit, which the earlier parts of his education might have had fome tendency to form in him, inflead of being rivetted and confirmed, is almost neceffarily either weakened or effaced. Nothing but the diferedit into which the universities are allowing themselves to fall, could ever have brought into repute fo very abfurd a practice as that of travelling at this early period of life. By fending his fon abroad, a father delivers himself, at least for fome time, from fo difagreeable an object as that of a fon unemployed, neglected, and going to ruin before his eyes.

SUCH have been the effects of some of the modern institutions for education.

DIFFERENT plans and different inftitutions for education feem to have taken place in other ages and nations.

In the republics of antient Greece, every free citizen was inftructed, under the direction of the public magiftrate, in gymnaftic exercifes and in mufic. By gymnaftic exercifes it was intended to harden his body, to fharpen his courage, and to prepare him for the fatigues and dangers of war; and as the Greek militia was, by all accounts, one of the beft that ever was in the world, this part of their public education muft have anfwered completely the purpofe for which it was intended. By the other part, mufic, it was propofed, at leaft by the philofophers and hiftorians who have given us an account of those inflitutions, to humanize the mind, to fosten the temper, and to dispose it for performing all the focial and moral duties both of public and private life.

IN antient Rome the exercifes of the Campus Martius anfwered the fame purpose as those of the Gymnazium in antient Greece, and

360

воок

 $\boldsymbol{V}_{\cdot}$ 

and they feem to have answered it equally well. But among the Romans there was nothing which corresponded to the mufical education of the Greeks. The morals of the Romans, however, both in private and public life, feem to have been, not only equal, but upon the whole, a good deal fuperior to those of the Greeks. That they were fuperior in private life, we have the express testimony of Polybius and of Dionyfius of Halicarnaffus; two authors well acquainted with both nations; and the whole tenor of the Greek and Roman hiftory bears witnefs to the fuperiority of the public morals of the Romans. The good temper and moderation of contending factions feems to be the most effential circumstance in the public morals of a free people. But the factions of the Greeks were almost always violent and fanguinary; whereas, till the time of the Gracchi, no blood had ever been shed in any Roman faction; and from the time of the Gracchi the Roman republic may be confidered as in reality diffolved. Notwithstanding, therefore, the very refpectable authority of Plato, Aristotle, and Polybius, and notwithftanding the very ingenious reafons by which Mr. Montesquieu endeavours to fupport that authority, it feems probable that the mufical education of the Greeks had no great effect in mending their morals, fince, without any fuch education, those of the Romans were upon the whole fuperior. The refpect, of those antient fages for the inflitutions of their anceftors, had probably difpofed them to find much political wifdom in what was, perhaps, merely an antient cuftom, continued, without interruption, from the earlieft period of those focieties, to the times in which they had arrived at a confiderable degree of refinement. Mufic and dancing are the great amufements of almost all barbarous nations, and the great accomplishments which are supposed to fit any man for entertaining his fociety. It is fo at this day among the negroes on the coast of Africa. It was fo among the antient Celtes, among the antient Scandinavians, and, as we may learn from Homer, among VOL. II. 3 A the 361

СНАР.

the antient Greeks in the times preceding the Trojan war. When the Greek tribes had formed themfelves into little republics, it was natural that the fludy of those accomplishments should, for a long time, make a part of the public and common education of the people.

THE mafters who inftructed the young people either in mufic or in military exercises, do not feem to have been paid, or even appointed by the flate, either in Rome or even in Athens, the Greek republic of whose laws and customs we are the best informed. The flate required that every free citizen should fit himself for defending it in war, and should, upon that account, learn his military exercises. But it left him to learn them of such masters as he could find, and it feems to have advanced nothing for this purpose, but a public field or place of exercise, in which he should practise and perform them.

In the early ages both of the Greek and Roman republics, the other parts of education feem to have confifted in learning to read, write, and account according to the arithmetic of the times. Thefe accomplifhments the richer citizens feem frequently to have acquired at home, by the affiftance of fome domeftic pedagogue who was generally, either a flave, or a freed-man; and the poorer citizens, in the fehools of fuch mafters as made a trade of teaching for hire. Such parts of education, however, were abandoned altogether to the care of the parents or guardians of each individual. It does not appear that the flate ever affumed any infpection or direction of them. By a law of Solon, indeed, the children were acquitted from maintaining thofe parents in their old age who had neglected to inftruct them in fome profitable trade or bufinefs.

In the progrefs of refinement, when philosophy and rhetoric came into fashion, the better fort of people used to fend their children

362

BOOK

dren to the fchools of philosophers and rhetoricians, in order to be CHAP. instructed in these fashionable sciences. But those schools were not fupported by the public. They were for a long time barely tolerated by it. The demand for philosophy and rhetoric was for a long time fo fmall, that the first professed teachers of either could not find conftant employment in any one city, but were obliged to travel about from place to place. In this manner lived Zeno of Elea, Protagoras, Gorgias, Hippias, and many others. As the demand increased, the schools both of philosophy and rhetoric became stationary; first in Athens, and afterwards in feveral other The flate, however, feems never to have encouraged them cities. further than by affigning to fome of them a particular place to teach in, which was fometimes done too by private donors. The ftate feems to have affigned the Academy to Plato, the Lyceum to Aristotle, and the Portico to Zeno of Citta the founder of the Stoics. But Epicurus bequeathed his gardens to his own fchool. Till about the time of Marcus Antoninus, however, no teacher appears to have had any falary from the public, or to have had any other emoluments, but what arofe from the honoraries or fees of his scholars. The bounty which that philosophical emperor, as we learn from Lucian, bestowed upon the teachers of philosophy, probably lasted no longer than his own life. There was nothing equivalent to the privileges of graduation, and to have attended any of those schools was not necessary, in order to be permitted to practife any particular trade or profession. If the opinion of their own utility could not draw fcholars to them, the law neither forced any body to go to them, nor rewarded any body for having gone to them. The teachers had no jurifdiction over their pupils, nor any other authority befides that natural authority, which fuperior virtue and abilities never fail to procure from young people, towards those who are entrusted with any part of their education.

3 A 2

AT

BOOK

~~~

AT Rome, the fludy of the civil law made a part of the education, not of the greater part of the citizens, but of fome particular families. The young people, however, who wished to acquire knowledge in the law, had no public fchool to go to, and had no other method of fludying it, than by frequenting the company of fuch of their relations and friends, as were fuppofed to underftand it. It is perhaps worth while to remark, that though the laws of the twelve tables were, many of them, copied from those of fome antient Greek republics, yet law never feems to have grown up to be a science in any republic of antient Greece. In Rome it became a science very early, and gave a considerable degree of illustration to those citizens who had the reputation of underftanding it. In the republics of antient Greece, particularly in Athens, the ordinary courts of justice confisted of numerous and, therefore, diforderly bodies of people, who frequently decided almost at random, or as a clamour, faction and party spirit happened to determine. The ignominy of an unjust decision, when it was to be divided among five hundred, a thousand, or fifteen hundred people (for fome of their courts were fo very numerous), could not fall very heavy upon any individual. At Rome, on the contrary, the principal courts of juffice confifted either of a fingle judge, or of a fmall number of judges, whofe characters, especially as they deliberated always in public, could not fail to be very much affected by any rafh or unjust decision. In doubtful cafes, fuch courts, from their anxiety to avoid blame, would naturally endeavour to shelter themselves under the example, or precedent, of the judges who had fat before them, either in the fame, or in fome other court. This attention, to practice and precedent, neceffarily formed the Roman law into that regular and orderly fystem in which it has been delivered down to us; and the like attention has had the like effects upon the laws of every other country where fuch attention has taken place. The fuperiority of character in the Romans over that of the Greeks, fo much

much remarked by Polybius and Dionyfius of Halicarnaffus, was probably more owing to the better conflictution of their courts of juftice, than to any of the circumftances to which those authors afcribe it. The Romans are faid to have been particularly diffinguished for their superior respect to an oath. But the people who were accustomed to make oath only before fome diligent and well informed court of juffice, would naturally be much more attentive to what they swore, than they who were accustomed to do the fame thing before mobbish and diforderly affemblies.

THE abilities, both civil and military, of the Greeks and Romans, will readily be allowed to have been, at leaft, equal to those of any modern nation. Our prejudice is perhaps rather to over-rate them. But except in what related to military exercises, the flate feems to have been at no pains to form those great abilities: for I cannot be induced to believe that the mulical education of the Greeks could be of much confequence in forming them. Mafters, however, had been found, it feems, for inftructing the better fort of people among those nations in every art and fcience in which the circumstances of their fociety rendered it necessary or convenient for them to be inftructed. The demand for fuch inftruction produced, what it always produces, the talent for giving it; and the emulation which an unreftrained competition never fails to excite, appears to have brought that talent to a very high degree of perfection. In the attention which the antient philosophers excited, in the empire which they acquired over the opinions and principles of their auditors, in the faculty which they poffeffed of giving a certain tone and character to the conduct and converfation of those auditors; they appear to have been much superior to any modern teachers. In modern times, the diligence of public. teachers is more or lefs corrupted by the circumfances, which render them more or lefs independent of their fuccefs, and reputation in their particular professions. Their falaries too put the private teacher, who would pretend to come into competition with them,

З'5 СНАР.

366

BOOK them, in the fame flate with a merchant who attempts to trade without a bounty, in competition with those who trade with a confiderable one: If he fells his goods at nearly the fame price, he cannot have the fame profit, and poverty and beggary at least, if not bankruptcy and ruin, will infallibly be his lot. If he attempts to fell them much dearer, he is likely to have fo few customers that his circumftances will not be much mended. The privileges of graduation, befides, are in many countries neceffary, or at least extremely convenient to most men of learned professions, that is, to the far greater part of those who have occasion for a learned education. But those privileges can be obtained only by attending the lectures of the public teachers. The most careful attendance upon the ableft inftructions of any private teacher, cannot always give any title to demand them. It is from thefe different caufes that the private teacher of any of the fciences which are commonly taught in univerfities, is in modern times generally confidered as in the very lowest order of men of letters. A man of real abilities can fcarce find out a more humiliating or a more unprofitable employment to turn them to. The endowments of fchools and colleges have, in this manner, not only corrupted the diligence of public teachers, but have rendered it almost impossible to have any good private ones.

> WERE there no public inflitutions for education, no fyftem, no fcience would be taught for which there was not fome demand; or which the circumflances of the times did not render it, either neceffary, or convenient, or at leaft fafhionable to learn. A private teacher could never find his account in teaching, either an exploded and antiquated fyftem of a fcience acknowledged to be ufeful, or a fcience univerfally believed to be a mere ufelefs and pedantic heap of fophiftry and nonfenfe. Such fyftems, fuch fciences, can fubfift no where, but in thofe incorporated focieties for education whofe profperity and revenue are in a great meafure independent of their reputation, and alto-

> > gether

gether independent of their industry. Were there no public inflitutions for education, a gentleman, after going through, with application and abilities, the most complete course of education, which the circumstances of the times were supposed to afford, could not come into the world completely ignorant of every thing which is the common subject of conversation among gentlemen and men of the world.

THERE are no public inflitutions for the education of women, and there is accordingly nothing ufelefs, abfurd, or fantaftical in the common courfe of their education. They are taught what their parents or guardians judge it neceffary or ufeful for them to learn; and they are taught nothing elfe. Every part of their education tends evidently to fome ufeful purpofe; either to improve the natural attractions of their perfon, or to form their mind to referve, to modefty, to chaftity, and to oeconomy: to render them both likely to become the miftreffes of a family, and to behave properly when they have become fuch. In every part of her life a woman feels fome conveniency or advantage from every part of his life, derives any conveniency or advantage from fome of the moft laborious and troublefome parts of his education.

OUGHT the public, therefore, to give no attention, it may be afked, to the education of the people? Or if it ought to give any, what are the different parts of education which it ought to attend to in the different orders of the people? and in what manner ought it to attend to them ?

IN fome cafes the flate of the fociety neceffarily places the greater part of individuals in fuch fituations as naturally form in them, without any attention of government, almost all the abilities and virtues which that flate requires, or perhaps can admit of.

BOOK of. In other cafes the flate of the fociety does not place the greater part of individuals in fuch fituations, and fome attention of government is neceffary in order to prevent the almost entire corruption and degeneracy of the great body of the people.

> IN the progress of the division of labour, the employment of the far greater part of those who live by labour, that is, of the great body of the people, comes to be confined to a few very fimple operations; frequently to one or two. But the understandings of the greater part of men are neceffarily formed by their ordinary employments. The man whole whole life is spent in performing a few simple operations, of which the effects too are, perhaps, always the fame, or very nearly the fame, has no occasion to exert his understanding, or to exercise his invention in finding out expedients for removing difficulties which never occur. He naturally lofes, therefore, the habit of fuch exertion, and generally becomes as flupid and ignorant as it is possible for a human creature to become. The torpor of his mind renders him, not only incapable of relifhing or bearing a part in any rational converfation, but of conceiving any generous, noble, or tender fentiment, and confequently of forming any just judgment concerning many even of the ordinary duties of private life. Of the great and extensive interests of his country, he is altogether incapable of judging; and unless very particular pains have been taken to render him otherwife, he is equally incapable of defending his country in war. The uniformity of his flationary life naturally corrupts the courage of his mind, and makes him regard with abhorrence the irregular, uncertain, and adventurous life of a foldier. It corrupts even the activity of his body, and renders him incapable of exerting his ftrength, with vigour and perseverance, in any other employment than that to which he has been bred. His dexterity at his own particular trade feems, in this manner, to be acquired at the expence of his intellectual, focial,

368

focial, and martial virtues. But in every improved and civilized C H A P. fociety this is the flate into which the labouring poor, that is, the great body of the people, muft neceffarily fall, unlefs government takes fome pains to prevent it.

IT is otherwife in the barbarous focieties, as they are commonly called, of hunters, of shepherds, and even of husbandmen in that rude flate of hufbandry which precedes the improvement of manufactures, and the extension of foreign commerce. In fuch focieties the varied occupations of every man oblige every man to exert his capacity, and to invent expedients for removing difficulties which are continually occurring. Invention is kept alive. and the mind is not fuffered to fall into that drowfy stupidity which, in a civilized fociety, feems to benumb the underftanding of almost all the inferior ranks of people. In those barbarous focieties, as they are called, every man, it has already been observed, is a warrior. Every man too is in some measure a ftatesman, and can form a tolerable judgment concerning the intereft of the fociety, and the conduct of those who govern it. How far their chiefs are good judges in peace, or good leaders in war, is obvious to the obfervation of almost every fingle man among them. In fuch a fociety indeed, no man can well acquire that improved and refined understanding, which a few men fometimes poffefs in a more civilized state. Though in a rude fociety there is a good deal of variety in the occupations of every individual, there is not a great deal in those of the whole fociety. Every man does, or is capable of doing, almost every thing which any other man does, or is capable of doing. Every man has a confiderable degree of knowledge, ingenuity, and invention; but fcarce any man has a great degree. The degree, however, which is commonly poffeffed, is generally fufficient for conducting the whole fimple bufinefs of the fociety. In a civilized flate, on the contrary, though there is little variety in the occupations of the VOL. II. 3 B greater

BOOK

greater part of individuals, there is an almost infinite variety in those of the whole fociety. These varied occupations present an almost infinite variety of objects to the contemplation of those few who, being attached to no particular occupation themselves, have leifure and inclination to examine the occupations of other people. The contemplation of fo great a variety of objects neceffarily exercises their minds in endless comparisons and combinations, and renders their understandings, in an extraordinary degree, both acute and comprehensive. Unless those few, however, happen to be placed in some very particular fituations, their great abilities, though honourable to themselves, may contribute very little to the good government or happiness of their fociety. Notwithstanding the great abilities of those few, all the nobler parts of the human character may be, in a great measure, obliterated and extinguished in the great body of the people.

THE education of the common people requires, perhaps, in a civilized and commercial fociety, the attention of the public more than that of people of fome rank and fortune. People of fome rank and fortune are generally eighteen or nineteen years of age before they enter upon that particular bufinefs, profeffion, or trade, by which they propofe to diffinguifh themfelves in the world. They have before that full time to acquire, or at leaft to fit themfelves for afterwards acquiring, every accomplishment which can recommend them to the public efteem, or render them worthy of it. Their parents or guardians are generally fufficiently anxious that they fhould be fo accomplished, and are, in most cafes, willing enough to lay out the expence which is neceffary for that purpofe. If they are not always properly educated, it is feldom from the want of expence laid out upon their education; but from the improper application of that expence. It is feldom from the want of mafters; but from the negligence and incapacity of the mafters who are to be had, and from

from the difficulty, or rather from the impoffibility which there is, in the prefent flate of things, of finding any better. The employments too in which people of fome rank or fortune fpend the greater part of their lives, are not, like thole of the common people, fimple and uniform. They are almost all of them extremely complicated, and fuch as exercife the head more than the hands. The underflandings of thole who are engaged in fuch employments can feldom grow torpid for want of exercife. The employments of people of fome rank and fortune, befides, are feldom fuch as harafs them from morning to night. They generally have a good deal of leifure, during which they may perfect themfelves in every branch either of uleful or ornamental knowledge of which they may have laid the foundation, or for which they may have acquired fome tafte in the earlier part of life.

IT is otherwife with the common people. They have little time to fpare for education. Their parents can fcarce afford to maintain them even in infancy. As foon as they are able to work, they muft apply to fome trade by which they can earn their fubfiftence. That trade too is generally fo fimple and uniform as to give little exercise to the understanding; while, at the fame time, their labour is both fo constant and fo fevere, that it leaves them little leifure and lefs inclination to apply to, or even to think of any thing elfe.

BUT though the common people cannot, in any civilized fociety, be fo well inftructed as people of fome rank and fortune, the moft effential parts of education, however, to read, write, and account, can be acquired at fo early a period of life, that the greater part even of those who are to be bred to the lowest occupations, have time to acquire them before they can be employed in those occupations. For a very small expense the public can facilitate, can encourage, and can even impose upon almost the whole body of $_3 B 2$ the

CHAP.

BOOK the V.

the people, the necessity of acquiring those most effential parts of education.

THE public can facilitate this acquifition by effablishing in every parish or diffrict a little school, where children may be taught for a reward fo moderate, that even a common labourer may afford it; the mafter being partly, but not wholly paid by the public; becaufeif he was wholly, or even principally paid by it, he would foon learn to neglect his business. In Scotland the establishment of fuch parish schools has taught almost the whole common people to read, and a very great proportion of them to write and account. In England the eftablifhment of charity fchools has had an effect of the fame kind, though not fo univerfally, because the eftablishment is not fo univerfal. If in those little schools the books, by which the children are taught to read, were a little more inftructivethan they commonly are; and if, inflead of a little fmattering of Latin; which the children of the common people are fometimes. taught there, and which can fcarce ever be of any use to them; they were instructed in the elementary parts of geometry and mechanics, the literary education of this rank of people would perhaps be as complete as it can be. There is fcaree a common trade which does not afford fome opportunities of applying to it the principles of geometry and mechanics, and which would not therefore gradually exercife and improve the common people in those principles, the neceffary introduction to the most fublime as well as to the most useful fciences.

THE public can encourage the acquisition of those most effential parts of education by giving small premiums, and little badges of distinction, to the children of the common people who excel in them.

THE public can impose upon almost the whole body of the people the necessity of acquiring those most effential parts of education, by obliging every man to undergo an examination or probation in them before

before he can obtain the freedom in any corporation, or be allowed C H A P. to fet up any trade either in a village or town corporate.

IT was in this manner, by facilitating the acquisition of their military and gymnaftic exercifes, by encouraging it, and even by impoling upon the whole body of the people the neceffity of learning those exercises, that the Greek and Roman republics maintained the martial spirit of their respective citizens. They facilitated the acquilition of those exercises by appointing a certain place for learning and practifing them, and by granting to certain mafters the privilege of teaching in that place. Those masters do not appear to have had either falaries or exclusive privileges of any kind. Their reward confifted altogether in what they got from their fcholars; and a citizen who had learnt his exercifes in the public Gymnafia, had no fort of legal advantage over one who had learnt them privately, provided the latter had learnt them equally well. Those republics encouraged the acquisition of those exercises, by bestowing little premiums and badges of diffinction upon those who exceljed in them. To have gained a prize in the Olympic, Ifthmian or Nemzan games, gave illustration, not only to the perfon who gained it, but to his whole family and kindred. The obligation which every citizen was under to serve a certain number of years, if called upon, in the armies of the republic, fufficiently imposed the necessity of learning those exercises without which he could not be fit for that ' - fervice.

THAT in the progress of improvement the practice of military exercises, unless government takes proper pains to support it, goes gradually to decay, and, together with it, the martial spirit of the great body of the people, the example of modern Europe sufficiently demonstrates. But the security of every society must always depend, more or less, upon the martial spirit of the great body of the people. In the present times, indeed, that martial spirit alone, and

and unfupported by a well-difciplined flanding army, would not, perhaps, be fufficient for the defence and fecurity of any fociety. But where every citizen had the fpirit of a foldier, a finaller flanding army would furely be requifite. That fpirit, befides, would neceffarily diminifh very much the dangers to liberty, whether real or imaginary, which are commonly apprehended from a flanding army. As it would very much facilitate the operations of that army againft a foreign invader, fo it would obftruct them as much if unfortunately they flould ever be directed againft the confliction of the flate.

THE antient inflitutions of Greece and Rome feem to have been much more effectual, for maintaining the martial fpirit of the great body of the people, than the eftablishment of what are called the militias of modern times. They were much more fimple. When they were once established, they executed themselves, and it required little or no attention from government to maintain them in the most perfect vigour. Whereas to maintain even in tolerable execution the complex regulations of any modern militia, requires the continual and painful attention of government, without which they are conflantly falling into total neglect and difuse. The influence, befides, of the antient inftitutions was much more univerfal. By means of them the whole body of the people was completely instructed in the use of arms. Whereas it is but a very small part of them who can ever be fo inftructed by the regulations of any modern militia; except, perhaps, that of Switzerland. But a coward, a man incapable either of defending or of revenging himfelf, evidently wants one of the most effential parts of the character of a man. He is as much mutilated and deformed in his mind, as another is in his body, who is either deprived of fome of its moft effential members, or has loft the use of them. He is evidently the more wretched and miferable of the two; because happiness and miferv,

374

BOOK

mifery, which refide altogether in the mind, muft neceffarily depend more upon the healthful or unhealthful, the mutilated or entire flate of the mind, than upon that of the body. Even though the martial fpirit of the people were of no ufe towards the defence of the fociety, yet to prevent that fort of mental mutilation, deformity and wretchednefs, which cowardice neceffarily involves in it, from fpreading themfelves through the great body of the people, would fill deferve the moft ferious attention of government; in the fame manner as it would deferve its moft ferious attention to prevent a leprofy or any other loathfome and offenfive difeafe, though neither mortal nor dangerous, from fpreading itfelf among them; though, perhaps, no other public good might refult from fuch attention befidesthe prevention of fo great a public evil.

THE fame thing may be faid of the gross ignorance and flupidity which, in a civilized fociety, feem fo frequently to benumb the understandings of all the inferior ranks of people. A man, without the proper use of the intellectual faculties of a man, is, if posfible, more contemptible than even a coward, and feems to be mutilated and deformed in a still more effential part of the character of human nature. Though the flate was to derive no advantage from. the inftruction of the inferior ranks of people, it would still deferve its attention that they fhould not be altogether uninftructed. The ftate, however, derives no inconfiderable advantage from their instruction. The more they are instructed, the less liable they are to the delutions of enthufiafm and fuperstition, which, among ignorant nations, frequently occasion the most dreadful diforders. An instructed and intelligent people befides are always more decent and orderly than an ignorant and flupid one: They feel themfelves, each individually, more refpectable, and more likely to obtain the refpect of their lawful fuperiors, and they are therefore more disposed to respect those superiors. They are more disposed to examine, T

375

CHAP.

Ι.

examine, and more capable of feeing through, the interefted complaints of faction and fedition, and they are, upon that account, lefs apt to be mifled into any wanton or unneceffary oppolition to the meafures of government. In free countries, where the fafety of government depends very much upon the favourable judgment which the people may form of its conduct, it must furely be of the higheft importance that they fhould not be difpofed to judge rashly or capricioufly concerning it.

ARTICLE III.

Of the Expence of the Institutions for the Instruction of People of all Ages.

THE inflitutions for the inftruction of people of all ages are chiefly those for religious instruction. This is a species of instruction of which the object is not fo much to render the people good citizens in this world, as to prepare them for another and a better world in a life to come. The teachers of the doctrine which contains this inftruction, in the fame manner as other teachers, may either depend altogether for their fubfistence upon the voluntary contributions of their hearers; or they may derive it from fome other fund to which the law of their country may entitle them; fuch as a landed eftate, a tythe or land tax, an eftablished falary or ftipend. Their exertion, their zeal and industry, are likely to be much greater in the former fituation than in the latter. In this respect the teachers of new religions have always had a confiderable advantage in attacking those antient and established fystems of which the clergy, repofing themfelves upon their benefices, had neglected to keep up the fervour of faith and devotion in the great body of the people; and having given themfelves up to indolence, were become altogether incapable of making any vigorous exertion in defence even of their own establishment. The clergy of an establifhed and well endowed religion frequently become men of learning and elegance, who poffefs all the virtues of gentlemen, or which 6

376

BOOK

can

can recommend them to the efteem of gentlemen; but they are apt gradually to lofe the qualities, both good and bad, which gave them authority and influence with the inferior ranks of people, and which had perhaps been the original caufes of the fuccefs and establishment of their religion. Such a clergy, when attacked by a fet of popular and bold, though perhaps flupid and ignorant enthuliafts, feel themselves as perfectly defenceless as the indolent, effeminate, and full fed nations of the fouthern parts of Afia, when they were invaded by the active, hardy, and hungry Tartars of the North. Such a clergy, upon fuch an emergency, have commonly no other refource than to call upon the civil magistrate to perfecute, destroy, or drive out their adversaries, as disturbers of the public peace. It was thus that the Roman catholic clergy called upon the civil magistrate to perfecute the protestants; and the church of England, to perfecute the diffenters; and that in general every religious fect, when it has once enjoyed for a century or two the fecurity of a legal establishment, has found itself incapable of making any vigorous defence against any new fect which chose to attack its doctrine or discipline. Upon fuch occasions the advantage in point of learning and good writing may fometimes be on the fide of the eftablished church. But the arts of popularity, all the arts of gaining profelytes, are conftantly on the fide of its adverfaries. In England those arts have been long neglected by the well-endowed clergy of the eftablished church, and are at prefent chiefly cultivated by the diffenters and by the methodifts. The independent provisions, however, which in many places have been made for diffenting teachers, by means of voluntary fubfcriptions, of truft rights, and other evalions of the law, feem very much to have abated the zeal and aclivity of those teachers. They have many of them become very learned, ingenious, and refpectable men; but they have in general ceafed to be very popular preachers. The methodifts, without half the learning of the diffenters, are much more in vogue.

Vol. II.

 In

377

CHAP.

~

In the church of Rome, the industry and zeal of the inferior clergy is kept more alive by the powerful motive of felf-intereft, than perhaps in any established protestant church. The parochial clergy derive, many of them, a very confiderable part of their fublistence from the voluntary oblations of the people; a fource of revenue which confession gives them many opportunities of improving. The mendicant orders derive their whole fublistence from fuch. oblations. It is with them, as with the huffars and light infantry of fome armies; no plunder, no pay. The parochial clergy are like those teachers whose reward depends partly upon their falary, and partly upon the fees or honoraries which they get from their pupils, and thefe muft always depend more or lefs upon their induftry The mendicant orders are like those teachers. and reputation. whofe fubfistence depends altogether upon their industry. They are obliged, therefore, to use every art which can animate the devotion of the common people. The eftablishment of the two great mendicant orders of St. Dominick and St. Francis, it is obferved by Machiavel, revived in the thirteenth and fourteenth centuries, the languishing faith and devotion of the catholic church. In Roman catholic countries the fpirit of devotion is fupported algether by the monks and by the poorer parochial clergy. The great dignitaries of the church, with all the accomplishments of gentlemen and men of the world, and fometimes with those of menof learning, are careful enough to maintain the neceffary discipline over their inferiors, but feldom give themfelves any trouble about the instruction of the people.

" MOST of the arts and profeffions in a flate," fays, by far the moft illuftrious philosopher and historian of the present age, " are " of such a nature, that, while they promote the interests of the " fociety, they are also useful or agreeable to some individuals; " and in that case, the constant rule of the magistrate, except, " perhaps,

378

BOOK

" perhaps, on the first introduction of any art, is, to leave the " profeffion to itself, and trust its encouragement to the indivi-" duals who reap the benefit of it. The artizans finding their " profits to rife by the favour of their customers, increase, as " much as possible, their skill and industry; and as matters are " not disturbed by any injudicious tampering, the commodity is " always fure to be at all times nearly proportioned to the " demand.

" BUT there are also fome callings, which, though useful and even neceffary in a flate, bring no advantage or pleasure to any individual, and the supreme power is obliged to alter its conduct with regard to the retainers of those professions. It must give them public encouragement in order to their substitutions, and it must provide against that negligence to which they will naturally be subject, either by annexing particular honours to the profesfion, by establishing a long subordination of ranks and a strict dependance, or by some other expedient. The perfons employed in the finances, fleets, and magistracy, are instances of this order of men."

" IT may naturally be thought, at first fight, that the eccleinfiss belong to the first class, and that their encouragement, as well as that of lawyers and physicians, may fafely be entrusted to the liberality of individuals, who are attached to their doctrines, and who find benefit or confolation from their spiritual ministry and affistance. Their industry and vigilance will, no doubt, be whetted by such an additional motive; and their skill in the profession, as well as their address in governing the minds of the people must receive daily increase, from their increasing practice, fudy, and attention.

3 C 2

" Bur

379

CHAP.

" BUT if we confider the matter more closely, we shall find, that " this interefted diligence of the clergy is what every wife legiflator " will fludy to prevent; becaufe in every religion except the true, " it is highly pernicious, and it has even a natural tendency to " pervert the true, by infufing into it a flrong mixture of fuper-" flition, folly, and delufion. Each ghoftly practitioner, in order " to render himfelf more precious and facred in the eyes of his " retainers, will infpire them with the most violent abhorrence of " all other fects, and continually endeavour, by fome novelty, to " excite the languid devotion of his audience. No regard will be " paid to truth, morals, or decency in the doctrines inculcated. " Every tenet will be adopted that beft fuits the diforderly affections " of the human frame. Cuftomers will be drawn to each conven-" ticle by new industry and addrefs in practifing on the paffions and " credulity of the populace. And in the end, the civil magiftrate " will find, that he has dearly paid for his pretended frugality, in " faving a fixed eftablifhment for the priefts; and that in reality " the most decent and advantageous composition, which he can " make with the fpiritual guides, is to bribe their indolence, by " affigning flated falaries to their profession, and rendering it fu-" perfluous for them to be farther active, than merely to prevent " their flock from firaying in queft of new pastures. And in this " manner ecclefiaftical establishments, though commonly they arose " at first from religious views, prove in the end advantageous to the " political interests of fociety."

But whatever may have been the good or bad effects of the independent provision of the clergy; it has, perhaps, been very feldom beftowed upon them from any view to those effects. Times of violent religious controversy have generally been times of equally violent political faction. Upon such occasions each political party has either found it, or imagined it, for its interest, to league itself

380

BOOK

itfelf with fome one or other of the contending religious fects. But C II A P. this could be done only by adopting, or at leaft by favouring, the tenets of that particular fect. The fect which had the good fortune to be leagued with the conquering party, neceffarily fliared in the victory of its ally, by whole favour and protection it was foon enabled in fome degree to filence and fubdue all its adverfaries. Those adversaries had generally leagued themselves with the enemies of the conquering party, and were therefore the enemies of that party. The clergy of this particular feet having thus become complete mafters of the field, and their influence and authority with the great body of the people being in its higheft vigour, they were powerful enough to over-awe the chiefs and leaders of their own party, and to oblige the civil magiftrate to refpect their opinions and inclinations. Their first demand was generally, that he should filence and fubdue. all their adverfaries; and their fecond, that he fhould beftow an independent provision on themselves. As they had generally contributed a good deal to the victory, it feemed not unreasonable that they should have some share in the spoil. They were weary besides of humouring the people, and of depending upon their caprice for a fubfistence. In making this demand therefore they confulted their own eafe and comfort, without troubling themfelves about the effect which it might have in future times upon the influence and authority of their order. The civil magistrate, who could comply with this demand only by giving them fomething which he would have chosen much rather to take, or to keep to himself, was feldom very forward to grant it. Neceffity, however, always forced him to fübmit at last, though frequently not till after many delays, evafions; and affected excuses.

BUT if politics had never called in the aid of religion, had the conquering party never adopted the tenets of one fect more than those of another, when it had gained the victory, it would proba-6 bly 3.81

382

BOOK bly have dealt equally and impartially with all the different fects, and have allowed every man to chufe his own priest and his own religion as he thought proper. There would in this cafe, no doubt, have been a great multitude of religious fects. Almost every different congregation night probably have made a little fect by itself, or have entertained some peculiar tenets of its own. Each teacher would no doubt have felt himfelf under the neceffity of making the utmost exertion, and of using every art both to preferve and to increase the number of his disciples. But as every other teacher would have felt himfelf under the fame neceffity; the fuccefs of no one teacher, or fect of teachers, could have been very great. The interefted and active zeal of religious teachers can be dangerous and troublefome only where there is, either but one fect tolerated in the fociety, or where the whole of a large fociety is divided into two or three great fects; the teachers of each acting by concert, and under a regular discipline and fubordination. But that zeal must be altogether innocent where the fociety is divided into two or three hundred, or perhaps into as many thousand small fects, of which no one could be confiderable enough to diffurb the publick tranquillity. The teachers of each fect, feeing themfelves furrounded on all fides with more adverfaries than friends, would be obliged to learn that candour and moderation which is fo feldom to be found among the teachers of those great fects, whose tenets being fupported by the civil magiftrate, are held in veneration by almost all the inhabitants of extensive kingdoms and empires, and who therefore fee nothing round them but followers, difciples, and humble admirers. The teachers of each little fect, finding themfelves almost alone, would be obliged to respect those of almost every other fect, and the conceffions which they would mutually find it both convenient and agreeable to make to one another, might in time probably reduce the doctrine of the greater part of them to that pure and rational religion, free from every mixture of abfurdity, imposture, or fanaticifm,

fanaticifin, fuch as wife men have in all ages of the world wifhed to CHAP. fee established; but such as positive law has perhaps never yet establifhed, and probably never will eftablifh in any country: becaufe with regard to religion, positive law always has been, and probably always will be, more or lefs influenced by popular fuperflition and enthufiafm. This plan of ecclefiaftical government, or more properly of no ecclefiaftical government, was what the fect called Independents, a fect no doubt of very wild enthufiafts, propofed to effablish. in England towards the end of the civil war. If it had been eftablifhed, though of a very unphilosophical origin, it would probably by this time have been productive of the most philosophical good temper and moderation with regard to every fort of religious principle. It has been eftablished in Penfylvania, where, though the Quakers happen to be the most numerous, the law in reality favours no one fect more than another, and it is there faid to have been productive of this philosophical good temper and moderation.

BUT though this equality of treatment fhould not be productive of this good temper and moderation in all, or even in the greater part of the religious fects of a particular country; yet provided those fects were fufficiently numerous, and each of them confequently too fmall to difturb the publick tranquillity, the exceffive zeal of each for its particular tenets, could not well be productive of any very hurtful effects, but, on the contrary, of feveral good ones: and if the government was perfectly decided both to let them all alone, and to oblige them all to let alone one another, there is little danger that they would not of their own accord fubdivide themfelves fast enough, fo as foon to become fufficiently numerous.

IN every civilized fociety, in every fociety where the diffinction of ranks has once been completely established, there have been 9. always.

384

ВООК

always two different fchemes or fystems of morality current at the fame time; of which the one may be called the ftrict or auftere; the other the liberal, or, if you will, the loofe fystem. The former is generally admired and revered by the common people: The latter is commonly more effected and adopted by what are called people of fashion. The degree of disapprobation with which we ought to mark the vices of levity, the vices which are apt to arife from great prosperity, and from the excess of gaiety and good humour, feems to conflitute the principal diffinction between those two opposite fchemes or fystems. In the liberal or loofe fystem, luxury, wanton and even diforderly mirth, the purfuit of pleafure to fome degree of intemperance, the breach of chastity, at least in one of the two fexes, &c. provided they are not accompanied with grofs indecency, and do not lead to falfhood or injuffice, are generally treated with a good deal of indulgence, and are eafily either excufed or pardoned altogether. In the auftere fystem, on the contrary, those excesses are regarded with the utmost abhorrence and detestation. The vices of levity are always ruinous to the common people, and a fingle week's thoughtlefinefs and diffipation is often fufficient to undo a poor workman for ever, and to drive him through defpair upon committing the most enormous crimes. The wifer and better fort of the common people, therefore, have always the utmost abhorrence and detestation of fuch exceffes, which their experience tells them are fo immediately fatal to people of their condition. The diforder and extravagance of feveral years, on the contrary, will not always ruin a man of fashion, and people of that rank are very apt to confider the power of indulging in some degree of excess as one of the advantages of their fortune, and the liberty of doing fo without cenfure or reproach, as one of the privileges which belong to their flation. In people of their own station, therefore, they regard fuch excesses with but a fmall degree of difapprobation, and cenfure them either very flightly or not at all.

ALMOST

ALMOST all religious fects have begun among the common people, from whom they have generally drawn their earlieft, as well as their moft numerous profelytes. The auftere fyftem of morality has, accordingly, been adopted by those fects almost constantly, or with very few exceptions; for there have been fome. It was the fyftem by which they could best recommend themselves to that order of people to whom they first proposed their plan of reformation upon what had been before established. Many of them, perhaps the greater part of them, have even endeavoured to gain credit by refining upon this austere fystem, and by carrying it to fome degree of folly and extravagance; and this excessive rigour has frequently recommended them more than any thing elfe to the respect and veneration of the common people.

A MAN of rank and fortune is by his flation the diffinguished member of a great fociety, who attend to every part of his conduct, and who thereby oblige him to attend to every part of it himfelf. His authority and confideration depend very much upon the refpect which this fociety bears to him. He dare not do any thing which would difgrace or difcredit him in it, and he is obliged to a very ftrict observation of that species of morals, whether liberal or austere, which the general confent of this fociety prefcribes to perfons of his rank and fortune. A man of low condition, on the contrary, is far from being a diffinguished member of any great fociety. While he remains in a country village his conduct may be attended to, and he may be obliged to attend to it himfelf. In this fituation, and in this fituation only, he may have what is called a character to lofe. But as foon as he comes into a great city, he is funk in obfcurity and darknefs. His conduct is obferved and attended to by nobody, and he is therefore very likely to neglect it himfelf, and to abandon himfelf to every fort of low profligacy and vice. He never emerges fo effectually from this obfcurity, his conduct never excites fo much the

Vol. II.

3 D

attention

385

CHAP,

attention of any refpectable fociety, as by his becoming the member of a fmall religious fect. He from that moment acquires a degree of confideration which he never had before. All his brother fectaries are, for the credit of the fect, interefted to obferve his conduct, and if he gives occasion to any fcandal, if he deviates very much from those austere morals which they almost always require of one another, to punish him by what is always a very fevere punishment, even where no civil effects attend it, expulsion or excommunication from the fect. In little religious fects, accordingly, the morals of the common people have been almost always remarkably regular and orderly; generally much more fo than in the effablished church. The morals of those little fects, indeed, have frequently been rather difagreeably rigorous and unfocial.

THERE are two very eafy and effectual remedies, however, by whole joint operation the flate might, without violence, correct whatever was unfocial or difagreeably rigorous in the morals of all the little fects into which the country was divided.

THE first of those remedies is the fludy of science and philosophy, which the flate might render almost universal among all people of middling or more than middling rank and fortune; not by giving falaries to teachers in order to make them negligent and idle, but by inftituting some fort of probation, even in the higher and more difficult sciences, to be undergone by every perfon before he was permitted to exercise any liberal profession, or before he could be received as a candidate for any honourable office of trust or profit. If the flate imposed upon this order of men the necessity of learning, it would have no occasion to give itself any trouble about providing them with proper teachers. They would foon find better teachers for themselves than any whom the flate could provide for them. Science is the great antidote to the poison of enthusing and superflition;

386

BOOK

flition; and where all the fuperior ranks of people were fecured from C H A P. it, the inferior ranks could not be much exposed to it.

THE fecond of those remedies is the frequency and gaiety of public diversions. The state, by encouraging, that is by giving entire liberty to all those who for their own interest would attempt, without fcandal or indecency, to amufe and divert the people by painting, poetry, mufic, dancing; by all forts of dramatic reprefentations and exhibitions, would eafily diffipate, in the greater part of them, that melancholy and gloomy humour which is almost always the nurse of popular superstition and enthusiasm. Public diversions have always been the objects of dread and hatred, to all the fanatical promoters of those popular frenzies. The gaiety and good humour which those diversions inspire were altogether inconfistent with that temper of mind, which was fitteft for their purpole, or which they could best work upon. Dramatic reprefentations befides, frequently exposing their artifices to publick ridicule, and fometimes even to public execration, were upon that account, more than all other diversions, the objects of their peculiar abhorrence.

IN a country where the law favoured the teachers of no one religion more than those of another, it would not be neceffary that any of them should have any particular or immediate dependency upon the fovereign or executive power; or that he should have any thing to do, either in appointing, or in difmissing them from their offices. In such a situation he would have no occasion to give himfelf any concern about them, further than to keep the peace among them, in the same manner as among the rest of his subjects; that is, to hinder them from perfecuting, abusing, or oppressing one another. But it is quite otherwise in countries where there is an established or governing religion. The fovereign can in this cafe never 3 D 2 be

388

^{BOOK} be fecure, unlefs he has the means of influencing in a confiderable degree the greater part of the teachers of that religion.

THE clergy of every established church constitute a great incorporation. They can act in concert, and purfue their interest upon one plan and with one fpirit, as much as if they were under the direction of one man; and they are frequently too under fuch direction. Their interest as an incorporated body is never the fame with that of the fovereign, and is fometimes directly opposite to it. Their great interest is to maintain their authority with the people; and this authority depends upon the fuppofed certainty and importance of the whole doctrine which they inculcate, and upon the fuppofed neceffity of adopting every part of it with the most implicit faith, in order to avoid eternal misery. Should the fovereign have the imprudence to appear either to deride or doubt himfelf of the most triffing part of their doctrine, or from humanity attempt to protect those who did either the one or the other, the punctilious honour of a clergy who have no fort of dependency upon him, is immediately provoked to proferibe him as a profane perfon, and to employ all the terrors of religion in order to oblige the people to transfer their allegiance to fome more orthodox and obedient prince. Should he oppofe any of their pretensions or usurpations, the danger is equally great. The princes who have dared in this manner to rebel against the church, over and above this crime of rebellion, have generally been charged too with the additional crime of herefy, notwithftanding their folemn protestations of their faith and humble fubmission to every tenet which she thought proper to prefcribe to them. But the authority of religion is fuperior to every other authority. The fears which it fuggefts conquer all other fears. When the authorifed teachers of religion propagate through the great body of the people

people doctrines fubverfive of the authority of the fovereign, it is CHAP. by violence only, or by the force of a ftanding army, that he can maintain his authority. Even a standing army cannot in this cafe give him any lafting fecurity; becaufe if the foldiers are not foreigners, which can feldom be the cafe, but drawn from the great body of the people, which must almost always be the cafe, they are likely to be foon corrupted by those very doctrines. The revolutions which the turbulence of the Greek clergy was continually occafioning at Conftantinople, as long as the eaftern empire fubfifted; the convultions which, during the course of feveral centuries, the turbulence of the Roman clergy was continually occafioning in every part of Europe, fufficiently demonstrate how precarious and infecure must always be the situation of the sovereign who has no proper means of influencing the clergy of the established and governing religion of his country.

ARTICLES of faith, as well as all other fpiritual matters, it is evident enough, are not within the proper department of a temporal fovereign, who, though he may be very well qualified for protecting, is feldom fupposed to be fo for instructing the people. With regard to fuch matters, therefore, his authority can feldom be fufficient to counterbalance the united authority of the clergy of the eftablished church. The public tranquillity, however, and his own fecurity, may frequently depend upon the doctrines which they may think proper to propagate concerning fuch matters. As he can feldom directly oppose their decision, therefore, with proper weight and authority, it is neceffary that he fhould be able to influence it; and he can influence it only by the fears and expectations which he may excite in the greater part of the individuals of the order. Those fears and expectations may confist in the fear of deprivation or other punifhment, and in the expectation of further preferment.

BOOK

In all christian churches the benefices of the clergy are a fort of freeholds which they enjoy, not during pleasure, but during life, or 6....... good behaviour. If they held them by a more precarious tenure, and were liable to be turned out upon every flight difobligation either of the fovereign or of his ministers, it would perhaps be impoffible for them to maintain their authority with the people, who would then confider them as mercenary dependents upon the court, in the fincerity of whofe inftructions they could no longer have any confidence. But should the fovereign attempt irregularly, and by violence to deprive any number of clergymen of their freeholds on account, perhaps, of their having propagated, with more than ordinary zeal, some factious or seditious doctrine, he would only render, by fuch perfecution, both them and their doctrine ten times more popular, and therefore ten times more troublefome and dangerous than they had been before. Fear is in almost all cafes a wretched inftrument of government, and ought in particular never to be employed against any order of men who have the fmallest pretensions to independency. To attempt to terrify them, ferves only to irritate their bad humour, and to confirm them in an opposition which more gentle usage perhaps might easily induce them, either to soften, or to lay aside altogether. The violence which the French government ufually employed in order to oblige all their parliaments, or sovereign courts of justice, to enregister any unpopular edict, very feldom fucceeded. The means commonly employed, however, the imprisonment of all the refractory members, one would think were forcible enough. The princes of the houfe of Stewart fometimes employed the like means in order to influence fome of the members of the parliament of England; and theygenerally found them equally intractable. The parliament of England is now managed in another manner; and a very finall experiment which the duke of Choifeul made about twelve years ago upon the parliament of Paris, demonstrated fufficiently that all the parliaments

parliaments of France might have been managed still more easily in the fame manner. That experiment was not pursued. For L though management and perfusion are always the eafieft and the fafeft inftruments of government, as force and violence are the worft and the most dangerous, yet fuch, it feems, is the natural infolence of man, that he almost always difdains to use the good instrument, except when he cannot or dare not use the bad one. The French government could and durft use force, and therefore difdained to use management and perfuasion. But there is no order of men, it appears, I believe, from the experience of all ages, upon whom it is fo dangerous, or rather fo perfectly ruinous, to employ force and violence, as upon the respected clergy of any established church. The rights, the privileges, the perfonal liberty of every individual ecclefiaftic, who is upon good terms with his own order, are, even in the most despotic governments, more respected than those of any other perfon of nearly equal rank and fortune. It is fo in every gradation of defpotifm, from that of the gentle and mild government of Paris, to that of the violent and furious government of Conftantinople. But though this order of men can fcarce ever be forced, they may be managed as eafily as any other; and the fecurity of the fovereign, as well as the public tranquillity, feems to depend very much upon the means which he has of managing them ; and those means feem to confist altogether in the preferment which he has to beftow upon them.

In the antient conflitution of the Chriftian church, the bifhop of each diocefe was elected by the joint votes of the clergy and of the people of the epifcopal city. The people did not long retain their right of election; and while they did retain it, they almost always acted under the influence of the clergy, who in fuch fpiritual matters appeared to be their natural guides. The clergy, however, foon grew weary of the trouble of managing them, and 5 391

CHAP.

BOOK V. in the fame manner, was elected by the monks of the monaftery, at leaft in the greater part of abbacies. All the inferior ecclenaftical benefices comprehended within the diocefe were collated by the bifhop, who beflowed them upon fuch ecclefiaftics as he thought proper. All church preferments were in this manner in the difpofal of the church. The fovereign, though he might have fome indirect influence in those elections, and though it was fometimes usual to afk both his confent to elect, and his approbation of the election, yet had no direct or fufficient means of managing the clergy. The ambition of every clergyman naturally led him to pay court, not fo much to his fovereign, as to his own order, from which only he could expect preferment.

> THROUGH the greater part of Europe the Pope gradually drew to himfelf first the collation of almost all bishopricks and abbacies, or of what were called Confistorial benefices, and afterwards, by various machinations and pretences, of the greater part of inferior benefices comprehended within each diocefe; little more being left to the bishop than what was barely necessary to give him a decent authority with his own clergy. By this arrangement the condition of the fovereign was still worfe than it had been before. The clergy of all the different countries of Europe were thus formed into a fort of spiritual army, dispersed in different quarters, indeed, but of which all the movements and operations could now be directed by one head, and conducted upon one uniform plan. The clergy of each particular country might be confidered as a particular detachment of that army, of which the operations could eafily be fupported and feconded by all the other detachments quartered in the different countries round about. Each detachment was not only independent of the fovereign of the country in which it was quartered, and by which it was maintained, but dependant upon a foreign

foreign fovereign, who could at any time turn its arms against the CHAP. fovereign of that particular country, and fupport them by the arms of all the other detachments.

THOSE arms were the most formidable that can well be imagined. In the autient state of Europe, before the establishment of arts and manufactures, the wealth of the clergy gave them the fame fort of influence over the common people, which that of the great barons gave them over their respective vaffals, tenants, and retainers. In the great landed effates, which the miftaken piety both of princes and private perfons had beftowed upon the church, jurifdictions were established of the fame kind with those of the great barons; and for the fame reafon. In those great landed eftates, the clergy, or their bailiffs, could eafily keep the peace without the fupport or affistance either of the king or of any other person; and neither the king nor any other perfon could keep the peace there without the fupport and affiftance of the clergy. The jurifdictions of the clergy, therefore, in their particular baronies or manors, were equally independent, and equally exclusive of the authority of the king's courts, as those of the great temporal lords. The tenants of the clergy were, like those of the great barons, almost all tenants at will, entirely dependent upon their immediate lords, and therefore liable to be called out at pleafure, in order to fight in any quarrel in which the clergy might think proper to engage them. Over and above the rents of those estates, the clergy possesfield, in the tythes, a very large portion of the rents of all the other effates in every kingdom of Europe. The revenues arising from both those species of rents were, the greater part of them, paid in kind, in corn, wine, cattle, poultry, &c. The quantity exceeded greatly what the clergy could themfelves confume; and there were neither arts nor manufactures for the produce of which they could exchange the furplus. The clergy could derive advantage from this immense furplus 3E VOL. II.

393

394

BOOK furplus in no other way than by employing it, as the great barons employed the like furplus of their revenues, in the most profuse hospitality, and in the most extensive charity. Both the hospitality and the charity of the antient clergy, accordingly, are faid to have been very great. They not only maintained almost the whole poor of every kingdom, but many knights and gentlemen had frequently no other means of fubfistence than by travelling about from monaflery to monaftery, under pretence of devotion, but in reality toenjoy the hospitality of the clergy. The retainers of some particular prelates were often as numerous as those of the greatest laylords; and the retainers of all the clergy taken together were, perhaps, more numerous than those of all the lay-lords. There was always much more union among the clergy than among the laylords. The former were under a regular discipline and subordination to the papal authority. The latter were under no regular difcipline or fubordination, but almost always equally jealous of one another, and of the king. Though the tenants and retainers of the clergy, therefore, had both together been less numerous than those of the great lay-lords, and their tenants were probably much less numerous, yet their union would have rendered them more formidable. The hospitality and charity of the clergy too, not only gave them the command of a great temporal force, but increased very much the weight of their spiritual weapons. Those virtues procured them the highest respect and veneration among all the inferior ranks of people, of whom many were conftantly, and almost all occasionally, fed by them. Every thing belonging or related to fo popular an order, its posseffions, its privileges, its doctrines, neceffarily appeared facred in the eyes of the common people, and every violation of them, whether real or pretended, the higheft act of facrilegious wickedness and profaneness. In this state of things, if the fovereign frequently found it difficult to refift the confederacy of a few of the great nobility, we cannot wonder that he 3 thould -

fhould find it ftill more fo to refift the united force of the clergy of C H A P. his own dominions, fupported by that of the clergy of all the neighbouring dominions. In fuch circumftances the wonder is, not that he was fometimes obliged to yield, but that he ever was able to refift.

THE privileges of the clergy in those antient times (which to us who live in the prefent times appear the moft abfurd) their total exemption from the fecular jurifdiction, for example, or what in England was called the benefit of clergy; were the natural or rather the neceffary confequences of this flate of things. How dangerous must it have been for the fovereign to attempt to punish a clergyman for any crime whatever, if his own order were disposed to protect him, and to represent either the proof as infufficient for convicting fo holy a man, or the punifhment as too fevere to be inflicted upon one whole perfon had been rendered facred by religion. The fovereign could, in fuch circumstances, do no better than leave him to be tried by the ecclefiastical courts, who, for the honour of their own order, were interested to restrain, as much as possible, every member of it from committing enormous crimes, or even from giving occasion to fuch gross fcandal as might difgust the minds of the people.

In the flate in which things were through the greater part of Europe during the tenth, eleventh, twelfth, and thirteenth centuries, and for fome time both before and after that period, the conflitution of the church of Rome may be confidered as the most formidable combination that ever was formed against the authority and fecurity of civil government, as well as against the liberty, reason, and happines of mankind, which can flourish only where civil government is able to protect them. In that conflitution the groffest delusions of superflition were supported in such a manner by 3 E 2 the

B O O K V. all danger from any affault of human reafon : becaufe though human reafon might perhaps have been able to unveil, even to the eyes of the common people, fome of the delufions of fuperflition; it could never have diffolved the ties of private intereft. Had this conflitution been attacked by no other enemies but the feeble efforts of human reafon, it muft have endured forever. But that immenfe and well built fabric, which all the wifdom and virtue of man could never have fhaken, much lefs have over-turned, was by the natural courfe of things, firft weakened, and afterwards in part deftroyed, and is now likely, in the courfe of a few centuries more, perhaps, to crumble into ruins altogether.

> THE gradual improvements of arts, manufactures, and commerce, the fame caufes which destroyed the power of the great barons, deftroyed in the fame manner, through the greater part of Europe, the whole temporal power of the clergy. In the produce of arts, manufactures, and commerce, the clergy, like the great barons, found fomething for which they could exchange their rude produce, and thereby difcovered the means of fpending their whole revenues upon their own perfons, without giving any confiderable share of them to other people. Their charity became gradually less extensive, their hospitality less liberal or less profuse. Their retainers became confequently lefs numerous, and by degrees dwindled away altogether. The clergy, too, like the great barons, wished to get a better rent from their landed eflates, in order to fpend it, in the fame manner, upon the gratification of their own private vanity and folly. But this increase of rent could be got only by granting leafes to their tenants, who thereby became in a great measure independent of them. The ties of interest, which bound the inferior ranks of people to the clergy, were in this manner gradually broken and diffolved. They were even broken and diffolved

diffolved fooner than those which bound the fame ranks of people to the great barons: becaufe the benefices of the church being, the greater part of them, much finaller than the effates of the great barons, the poffeffor of each benefice was much fooner able to fpend the whole of its revenue upon his own perfon. During the greater part of the fourteenth and fifteenth centuries the power of the great barons was, through the greater part of Europe, in full vigour. But the temporal power of the clergy, the abfolute command which they had once had over the great body of the people, was very much decayed. The power of the church was by that time very nearly reduced through the greater part of Furope to what arofe from her fpiritual authority; and even that fpiritual authority was much weakened when it ceafed to be fupported by the charity and hofpitality of the clergy. The inferior ranks of people no longer looked upon that order, as they had done before, as the comforters of their diftrefs, and the relievers of their indigence. On the contrary, they were provoked and difgusted by the vanity, luxury, and expence of the richer clergy, who appeared to fpend upon their own pleafures what had always before been regarded as the patrimony of the poor.

In this fituation of things, the fovereigns in the different flates of Europe endeavoured to recover the influence which they had once had in the difpofal of the great benefices of the church, by procuring to the deans and chapters of each diocefe the reftoration of their antient right of electing the bifhop, and to the monks of each abbacy that of electing the abbot. The re-eftablifhing of this ancient order was the object of feveral flatutes enacted in England during the courfe of the fourteenth century, particularly of what is called the flatute of provifors; and of the pragmatic fanction eftablifhed in France in the fifteenth century. In order to render the election valid, it was neceffary that the fovereign fhould 397

CHAP.

BOOK should both confent to it before-hand, and afterwards approve of the perfon elected; and though the election was still supposed to be free, he had, however, all the indirect means which his fituation neceffarily afforded him, of influencing the clergy in his own dominions. Other regulations of a fimilar tendency were established in other parts of Europe. But the power of the pope in the collation of the great benefices of the church feems, before the reformation, to have been no where fo effectually and fo univerfally reflrained as in France and England. The Concordat afterwards, in the fixteenth century, gave to the kings of France the abfolute right of prefenting to all the great, or what are called the confiftorial benefices of the Gallican church.

> SINCE the establishment of the Pragmatic fanction and of the Concordat, the clergy of France have in general shown lefs respect to the decrees of the papal court than the clergy of any other catholic country. In all the difputes which their fovereign has had with the pope, they have almost constantly taken party with the former. This independency of the clergy of France upon the court of Rome, feems to be principally founded upon the Pragmatic fanction and the Concordat. In the earlier periods of the monarchy, the clergy of France appear to have been as much devoted to the pope as those of any other. country. When Robert, the fecond prince of the Capetian race, was most unjustly excommunicated by the court of Rome, his own fervants, it is faid, threw the victuals which came from his table to the dogs, and refused to tafte any thing themselves which had been polluted by the contact of a perfon in his fituation. They were taught to do fo, it may very fafely be prefumed, by the clergy of his own dominions.

THE claim of collating to the great benefices of the church, a claim in defence of which the court of Rome had frequently shaken, and fometimes overturned the thrones of fome of the greatest fovereigns

398

 V_{-}

reigns in Christendom, was in this manner either reftrained or modified, or given up altogether, in many different parts of Europe, even before the time of the reformation. As the clergy had now lefs influence over the people, fo the flate had more influence over the clergy. The clergy therefore had both lefs power and lefs inclination to diffurb the flate.

THE authority of the church of Rome was in this state of declenfion, when the difputes which gave birth to the reformation, began in Germany, and foon fpread themfelves through every part of Europe. The new doctrines were every where received with a high degree of popular favour. They were propagated with all that enthuliaftic zeal which commonly animates the fpirit of party, when it attacks established authority. The teachers of those doctrines, though perhaps in other respects not more learned than many of the divines who defended the established church, feem in general to have been better acquainted with ecclefiaftical hiftory, and with the origin and progrefs of that.fyftem of opinions upon which the authority of the church was established, and they had thereby fome advantage in almost every dispute. The austerity of their manners gave them authority with the common people, who contrasted the strict regularity of their conduct with the diforderly lives of the greater part of their own clergy. They poffeffed too in a much higher degree than their adversaries, all the arts of popularity and of gaining profelytes, arts which the lofty and dignified fons of the church had long neglected, as being to them in a great measure useles. The reason of the new doctrines recommended them to fome, their novelty to many; the hatred and contempt of the eftablished clergy to a still greater number; but the zealous, paffionate and fanatical, though frequently coarfe and ruftic eloquence with which they were almost every where inculcated, recommended them to by far the greateft number.

THE

BOOK V.

THE fucce's of the new doctrines was almost every where fo great. that the princes who at that time happened to be on bad terms with the court of Rome, were by means of them eafily enabled in their own dominions, to over-turn the church, which, having loft the respect and veneration of the inferior ranks of people, could make fcarce any reliftance. The court of Rome had difobliged fome of the fmaller princes in the northern parts of Germany, whom it had probably confidered as too infignificant to be worth the managing. They univerfally, therefore, eftablished the reformation in their own dominions. The tyranny of Christiern II. and of Troll archbishop of Upfal, enabled Gustavus Vafa to expel them both from Sweden. The pope favoured the tyrant and the archbishop, and Gustavus Vafa found no difficulty in eftablishing the reformation in Sweden. Chriftiern II. was afterwards depofed from the throne of Denmark, where his conduct had rendered him as odious as in Sweden. The pope, however, was still disposed to favour him, and Frederic of Holstein, who had mounted the throne in his flead, revenged himfelf by following the example of Gustavus Vafa. The magistrates of Berne and Zurich, who had no particular quarrel with the pope, eftablished with great ease the reformation in their respective cantons, where just before fome of the clergy had, by an imposture fomewhat groffer than ordinary, rendered the whole order both odious and contemptible.

In this critical fituation of its affairs, the papal court was at fufficient pains to cultivate the friendship of the powerful fovereigns of France and Spain, of whom the latter was at that time emperor of Germany. With their affishance it was enabled, though not without great difficulty and much bloodshed, either to fuppress altogether, or to obstruct very much the progress of the reformation in their dominions. It was well enough inclined too to be complaisant to the king of England. But from the circumstances

flances of the times it could not be fo without giving offence to a fill greater fovereign, Charles V. king of Spain and emperor of Germany. Henry VIII. accordingly, though he did not embrace himfelf the greater part of the doctrines of the reformation, was yet enabled, by their general prevalence, to fupprefs all the monafteries, and to abolifh the authority of the church of Rome in his dominions. That he fhould go fo far, though he went no further, gave fome fatisfaction to the patrons of the reformation, who having got poffeffion of the government in the reign of his fon and fucceffor, completed without any difficulty the work which Henry VIII. had begun.

IN fome countries, as in Scotland, where the government was weak, unpopular, and not very firmly eftablished, the reformation was strong enough to overturn, not only the church, but the state likewife for attempting to support the church.

AMONG the followers of the reformation, difperfed in all the different countries of Europe, there was no general tribunal which, like that of the court of Rome, or an œcumenical council, could fettle all difputes among them, and with irrefiftible authority prefcribe to all of them the precife limits of orthodoxy. When the followers of the reformation in one country, therefore, happened to differ from their brethren in another, as they had no common judge to appeal to, the difpute could never be decided; and many fuch difputes arofe among them. Those concerning the government of the church, and the right of conferring ecclessifical benefices, were perhaps the most interesting to the peace and welfare of civil society. They gave birth accordingly to the two principal parties or fects among the followers of the reformation, the Lutheran and Calvinific fects, the only fects among them, of which the doctrine and difcipline have ever yet been established by law in any part of Europe.

VOL. II.

3 F

THE

В О О К V.

402

THE followers of Luther, together with what is called the church of England, preferved more or less of the episcopal government, eftablished fubordination among the clergy, gave the fovereign the difpofal of all the bishopricks, and other confistorial benefices within his dominions, and thereby rendered him the real head of the church; and without depriving the bifhop of the right of collating to the fmaller benefices within his diocefe, they, even to those benefices, not only admitted, but favoured the right of prefentation both in the fovereign and in all other lay-patrons. This fyftem of church government was from the beginning favourable to peace and good order, and to fubmiffion to the civil fovereign. It has never, accordingly, been the occasion of any tumult or civil commotion in any country in which it has once been established. The church of England in particular has always valued herfelf, with great reason, upon the unexceptionable loyalty of her principles. Under fuch a government the clergy naturally endeavour to recommend themfelves to the fovereign, to the court, and to the nobility and gentry of the country, by whofe influence they chiefly expect to obtain preferment. They pay court to those patrons, fometimes, no doubt, by the vileft flattery and affentation, but frequently too by cultivating all those arts which best deferve, and which are therefore most likely to gain them the efteem of people of rank and fortune; by their knowledge in all the different branches of useful and ornamental learning, by the decent liberality of their manners, by the focial good humour of their conversation, and by their avowed contempt of those absurd and hypocritical austerities which fanatics inculcate and pretend to practife, in order to draw upon themfelves the veneration, and upon the greater part of men of rank and fortune, who avow that they do not practife them, the abhorrence of the common people. Such a clergy, however, while they pay their court in this manner to the higher ranks of life, are very apt to negleft altogether the means of maintaining their influence and authority

rity with the lower. They are listened to, esteemed and respected by their fuperiors; but before their inferiors they are frequently incapable of defending, effectually and to the conviction of fuch hearers, their own fober and moderate doctrines against the most ignorant enthufiaft who chufes to attack them.

THE followers of Zuinglius, or more properly those of Calvin, on the contrary, beftowed upon the people of each parifh, whenever the church became vacant, the right of electing their own paftor; and eftablished at the fame time the most perfect equality among the clergy. The former part of this inflitution, as long as it remained in vigour, feems to have been productive of nothing but diforder and confusion, and to have tended equally to corrupt the morals both of the clergy and of the people. The latter part feems never to have had any effects but what were perfectly agreeable.

As long as the people of each parish preferved the right of electing their own paftors, they acted almost always under the influence of the clergy, and generally of the most factious and fanatical of the order. The clergy in order to preferve their influence in those popular elections, became, or affected to become many of them, fanatics themfelves, encouraged fanaticifm among the people, and gave the preference almost always to the most fanatical candidate. So fmall a matter as the appointment of a parish priest occasioned almost always a violent contest, not only in one parish, but in all the neighbouring parishes, who feldom failed to take party in the quarrel. When the parish happened to be fituated in a great city, it divided all the inhabitants into two parties; and when that city happened either to conflitute itself a little republic, or to be the head and capital of a little republic, as is the cafe with many of the confiderable cities in Switzerland and

3F 2

403

CHAP.

BOOK V.

404

and Holland, every paltry difpute of this kind, over and above exafperating the animofity of all their other factions, threatened to leave behind it both a new schifm in the church, and a new faction in the ftate. In those fmall republics, therefore, the magistrate very foon found it neceffary, for the fake of preferving the public peace, to affume to himfelf the right of prefenting to all vacant benefices. In Scotland, the most extensive country in which this prefbyterian form of church government has ever been established, the rights of patronage were in effect abolished by the act which established prefbytery in the beginning of the reign of William III. That act at least put it in the power of certain classes of people in each parish, to purchase, for a very small price, the right of electing their own paftor. The conftitution which this act established was allowed to fubfift for about two and twenty years, but was abolished by the 10th of queen Ann, ch. 12. on account of the confusions and diforders which this more popular mode of election had almost every where occafioned. In fo extensive a country as Scotland, however, a tumult in a remote parish was not fo likely to give diffurbance to government, as in a smaller state. The 10th of queen Ann restored the rights of patronage. But though in Scotland the law gives the benefice without any exception to the perfon prefented by the patron; yet the church requires fometimes (for fhe has not in this respect been very uniform in her decisions) a certain concurrence of the people, before she will confer upon the presentee what is called the cure of fouls, or the ecclefiaftical jurifdiction in the parifh. She fometimes at leaft, from an affected concern for the peace of the parifh, delays the fettlement till this concurrence can be procured. The private tampering of fome of the neighbouring clergy, fometimes to procure, but more frequently to prevent this concurrence, and the popular arts which they cultivate in order to enable them upon fuch occasions to tamper more effectually, are perhaps the causes which 4 princi-

principally keep up whatever remains of the old fanatical fpirit, either C H A P. in the clergy or in the people of Scotland.

THE equality which the prefbyterian form of church government establishes among the clergy, confist, fift, in the equality of authority or ecclefiaftical jurifdiction; and, fecondly, in the equality of benefice. In all prefbyterian churches the equality of authority is perfect: that of benefice is not fo. The difference however, between one benefice and another, is feldom fo confiderable as commonly to tempt the poffeffor even of the fmall one to pay court to his patron, by the vile arts of flattery and affentation, in order to get a better. In all the prefbyterian churches, where the rights of patronage are thoroughly eftablifhed, it is by nobler and better arts that the eftablifhed clergy in general endeavour to gain the favour of their fuperiors; by their learning, by the irreproachable regularity of their life, and by the faithful and diligent difcharge of their duty. Their patrons even frequently complain of the independency of their fpirit, which they are apt to conftrue into ingratitude for past favours, but which at worft, perhaps, is feldom any more than that indifference which naturally arifes from the confcioufnefs that no further favours of the kind are ever to be expected. There is fcarce perhaps to be found any where in Europe a more learned, decent, independent, and respectable set of men, than the greater part of the prefbyterian clergy of Holland, Geneva, Switzerland, and Scotland.

WHERE the church benefices are all nearly equal, none of them can be very great, and this mediocrity of benefice, though t may no doubt be carried too far, has, however, fome very agreeable effects. Nothing but the most exemplary morals cangive dignity to a man of fmall fortune. The vices of levity and vanity necessfarily render him ridiculous, and are, besides, almost 405

2:5:

as ruinous to him as they are to the common people. In his own conduct, therefore, he is obliged to follow that fystem of morals which the common people respect the most. He gains their esteem and affection by that plan of life which his own interest and situation would lead him to follow. The common people look upon him with that kindness with which we naturally regard one who approaches fomewhat to our own condition, but who, we think, ought to be in a higher. Their kindness naturally provokes his kindnefs. He becomes careful to inftruct them, and attentive to affist and relieve them. He does not even despise the prejudices of of people who are difposed to be fo favourable to him, and never treats them with those contemptuous and arrogant airs which we fo often meet with in the proud dignitaries of opulent and wellendowed churches. The prefbyterian clergy, accordingly, have more influence over the minds of the common people than perhaps the clergy of any other established church. It is accordingly in presbyterian countries only that we ever find the common people converted, without perfecution, completely, and almost to a man, to the eftablished church.

In countries where church benefices are the greater part of them very moderate, a chair in a univerfity is generally a better effablishment than a church benefice. The univerfities have, in this cafe, the picking and chusing of their members from all the churchmen of the country, who, in every country, conflitute by far the most numerous class of men of letters. Where church benefices, on the contrary, are many of them very confiderable, the church naturally draws from the universities the greater part of their eminent men of letters; who generally find fome patron who does himfelf honour by procuring them church preferment. In the former fituation we are likely to find the universities filled with the most emi-

nent

406

воок

nent men of letters that are to be found in the country. In the lat- CHAP. ter we are likely to find few eminent men among them, and those 'few among the youngest members of the fociety, who are likely too to be drained away from it, before they can have acquired experience and knowledge enough to be of much use to it. It is obferved by Mr. de Voltaire that father Porrée, a jesuit of no great eminence in the republic of letters, was the only profeffor they had ever had in France whofe works were worth the reading. In a country which has produced fo many eminent men of letters, it must appear fomewhat fingular that fcarce one of them should have been a professor in a university. The famous Gassendi was, in the beginning of his life, a profeffor in the university of Aix. Upon the first dawning of his genius, it was reprefented to him, that by going into the church he could eafily find a much morequiet and comfortable fublistence, as well as a better fituation for purfuing his studies; and he immediately followed the advice. The obfervation of Mr. de Voltaire may be applied, I believe, not only to France, but to all other Roman catholic countries. We very rarely find, in any of them, an eminent man of letters who is a professor in a university, except, perhaps, in the professions of law and phyfic; profeffions from which the church is not fo likely to draw them. After the church of Rome, that of England, is by far the richeft and beft endowed church in Chriftendom. In England, accordingly, the church is continually draining the univerfities. of all their best and ablest members; and an old college tutor, who is known and diffinguished in Europe as an eminent man of letters, is as rarely to be found there as in any Roman catholic country. In-Geneva, on the contrary, in the protestant cantons of Switzerland, 'n the protestant countries of Germany, in Holland, in Scotland, in Sweden, and Denmark, the most eminent men of letters whomthose countries have produced, have, not all indeed, but the far greater part of them, been professions in universities. In those countries.

BOOK countries the universities are continually draining the church of all its most eminent men of letters.

IT may, perhaps, be worth while to remark, that, if we except the poets, a few orators, and a few historians, the far greater part of the other eminent men of letters, both of Greece and Rome, appear to have been either public or private teachers; generally either of philosophy or of rhetoric. This remark will be found to hold true from the days of Lysias and Isocrates, of Plato and Aristotle, down to those of Plutarch and Epicletus, of Suctonius and Quintilian. To impose upon any man the necessity of teaching, year after year, any particular branch of science, seems, in reality, to be the most effectual method for rendering him completely mafter of it himfelf. By being obliged to go every year over the fame ground, if he is good for any thing, he neceffarily becomes, in a few years, well acquainted with every part of it : and if upon any particular point he fhould form too hafty an opinion one year, when he comes in the course of his lectures to re-confider the fame fubject the year thereafter, he is very likely to correct it. As to be a teacher of fcience is certainly the natural employment of a mere man of letters; fo is it likewife, perhaps, the education which is most likely to render him a man of folid learning and knowledge. The mediocrity of church benefices naturally tends to draw the greater part of men of letters, in the country where it takes place, to the employment in which they can be the most useful to the public, and, at the fame time, to give them the best education, perhaps, they are capable of receiving. It tends to render their learning both as folid as poffible, and as useful as possible.

THE revenue of every established church, such parts of it excepted as may arise from particular lands or manors, is a branch, it ought to be observed, of the general revenue of the state, which is

is thus diverted to a purpole very different from the defence of the flate. The tythe, for example, is a real land-tax, which puts it out of the power of the proprietors of land to contribute fo largely towards the defence of the flate as they otherwife might be able to do. The rent of land, however, is, according to fome, the fole fund, and, according to others, the principal fund, from which, in all great monarchies, the exigencies of the flate must be ultimately fupplied. The more of this fund that is given to the church, the lefs, it is evident, can be spared to the state. It may be laid down as a certain maxim, that, all other things being supposed equal, the richer the church, the poorer must necessarily be, either the fovereign on the one hand, or the people on the other; and, in all cafes, the lefs able must the state be to defend itself. In several protestant countries, particularly in all the protestant cantons of Switzerland, the revenue which antiently belonged to the Roman catholic church, the tythes and church lands, has been found a fund fufficient, not only to afford competent falaries to the eftablished clergy, but to defray with little or no addition, all the other expences of the flate. The magistrates of the powerful canton of Berne, in particular, have accumulated out of the favings from this fund a very large fum, supposed to amount to feveral millions, part of which is deposited in a public treasure, and part is placed at interest in what are called the public funds of the different indebted nations of Europe; chiefly in those of France and Great Britain. What may be the amount of the whole expence which the church, either of Berne, or of any other protestant canton, costs the state, I do not pretend to know. By a very exact account it appears, that, in 1755, the whole revenue of the clergy of the church of Scotland, including their glebe or church lands, and the rent of their manfes or dwelling-houfes, effimated according to a reafonable valuation, amounted only to 68,5141. 1s. 5d. 12. This very moderate revenue affords a decent fubfistence to nine hundred and forty-VOL. II. four 3 G

BOOK

four ministers. The whole expence of the church, including what is occasionally laid out for the building and reparation of churches, and of the manses of ministers, cannot well be supposed to exceed eighty or eighty-five thousand pounds a year. The most opulent church in Christendom does not maintain better the uniformity of faith, the fervour of devotion, the spirit of order, regularity, and auftere morals in the great body of the people, than this very poorly endowed church of Scotland. All the good effects, both civil and religious, which an eftablished church can be supposed to preduce. are produced by it as completely as by any other. The greater part of the protestant churches of Switzerland, which in general are not better endowed than the church of Scotland, produce those effects in a still higher degree. In the greater part of the protestant cantons, there is not a fingle perfon to be found who does not profefs himfelf to be of the established church. If he professes himself to be of any other, indeed, the law obliges him to leave the canton. But fo fevere, or rather indeed fo oppreffive a law, could never have been executed in fuch free countries, had not the diligence of the clergy before-hand converted to the established church the whole body of the people, with the exception of, perhaps, a few individuals only. In fome parts of Switzerland, accordingly, where, from the accidental union of a protestant and Roman catholic country, the conversion has not been to complete, both religions are not only tolerated, but eftablished by law.

THE proper performance of every fervice feems to require that its pay or recompence fhould be, as exactly as poffible, proportioned to the nature of the fervice. If any fervice is very much under-paid, it is very apt to fuffer by the meannefs and incapacity of the greater part of thofe who are employed in it. If it is very much over-paid, it is apt to fuffer, perhaps, flill more by their. negligence and idlenefs. A man of a large revenue, whatever may be be his profeffion, thinks he ought to live like other men of large revenues; and to fpend a great part of his time in feftivity, in vanity, and in diffipation. But in a clergyman this train of life not only confumes the time which ought to be employed in the duties of his function, but in the eyes of the common people deftroys almost entirely that fanctity of character which can alone enable him to perform those duties with proper weight and authority.

PART- IV.

Of the Expence of supporting the Dignity of the Sovereign.

OVER and above the expence neceffary for enabling the fovereign to perform his feveral duties, a certain expence is requifite for the fupport of his dignity. This expence varies both with the different periods of improvement, and with the different forms of government.

IN an opulent and improved fociety, where all the different orders of people are growing every day more expensive in their houses, in their furniture, in their tables, in their drefs, and in their equipage; it cannot well be expected that the fovereign should alone hold out against the fashion. He naturally, therefore, or rather necessarily becomes more expensive in all those different articles too. His dignity even feems to require that he should become fo.

As in point of dignity, a monarch is more raifed above his fubjects than the chief magistrate of any republic is ever supposed to be above his fellow citizens; fo a greater expence is necessary for supporting that higher dignity. We naturally expect more splendor in the court of a king than in the mansion-house of a doge or burgomaster.

CONCLUSION.

THE expence of defending the fociety, and that of fupporting the dignity of the chief magiftrate, are both laid out for the general benefit of the whole fociety. It is reafonable, therefore, that they fhould be defrayed by the general contribution of the whole fociety, all the different members contributing, as nearly as poffible, in proportion to their respective abilities.

THE expence of the administration of justice too may, no doubt, be confidered as laid out for the benefit of the whole fociety. There is no impropriety, therefore, in its being defrayed by the general contribution of the whole fociety. The perfons, however, who give occafion to this expence are those, who, by their injustice in one way or another, make it neceffary to feek redrefs or protection from the courts of juffice. The perfons again most immediately benefited by this expence, are those whom the courts of justice, either reftore to their rights, or maintain in their rights. The expence of the administration of justice, therefore, may very properly be defrayed by the particular contribution of one, or other, or both of those two different fets of perfons, according as different occasions may require, that is, by the fees of court. It cannot be neceffary to have recourfe to the general contribution of the whole fociety, except for the conviction of those criminals who have not themselves any estate or fund fufficient for paying those fees.

THOSE local or provincial expences of which the benefit is local or provincial (what is laid out, for example, upon the police of a particular town or diffrict) ought to be defrayed by a local or provincial revenue, and ought to be no burden upon the general revenue of the fociety. It is unjust that the whole fociety should contribute towards an expence of which the benefit is confined to a part of the fociety. THE

THE expence of maintaining good roads and communications is, no doubt, beneficial to the whole fociety, and may, therefore, without any injuffice, be defrayed by the general contribution of the whole fociety. This expence, however, is most immediately and directly beneficial to those who travel or carry goods from one place to another, and to those who confume fuch goods. The turnpike tolls in England, and the duties called peages in other countries, lay it altogether upon those two different sets of people, and thereby discharge the general revenue of the fociety from a very confiderable burden.

THE expence of the inflitutions for education and religious inflruction, is likewife, no doubt, beneficial to the whole fociety, and may, therefore, without injuffice, be defrayed by the general contribution of the whole fociety. This expence, however, might perhaps with equal propriety, and even with fome advantage, be defrayed altogether by those who receive the immediate benefit of fuch education and inftruction, or by the voluntary contribution of those who think they have occasion for either the one or the other.

WHEN the inflitutions or public works which are beneficial to the whole fociety, either cannot be maintained altogether, or are not maintained altogether by the contribution of fuch particular members of the fociety as are most immediately benefited by them, the deficiency must in most cafes be made up by the general contribution of the whole fociety. The general revenue of the fociety, over and above defraying the expence of defending the fociety and of fupporting the dignity of the chief magistrate, must make up for the deficiency of many particular branches of revenue. The fources ofthis general or public revenue, I shall endeavour to explain in the following chapter.

CHAP. II.

Of the Sources of the general or publick Revenue of the Society.

HE revenue which must defray, not only the expence of defending the fociety and of fupporting the dignity of the chief magistrate, but all the other necessfary expences of government, for which the constitution of the state has not provided any particular revenue, may be drawn, either, first, from some fund which peculiarly belongs to the sovereign or commonwealth, and which is independent of the revenue of the people; or, secondly, from the revenue of the people.

PART I.

Of the Funds or Sources of Revenue which may peculiarly belong to the Sovereign or Commonwealth.

THE funds or fources of revenue which may peculiarly belong to the fovereign or commonwealth must confist, either in stock, or in land.

THE fovereign, like any other owner of flock, may derive a revenue from it, either by employing it himfelf, or by lending it. His revenue is in the one cafe, profit; in the other, intereft.

THE revenue of a Tartar or Arabian chief confifts in profit. It arifes principally from the milk and increase of his own herds and flocks, of which he himfelf fuperintends the management, and is the principal shepherd or herdssman of his own horde or tribe. It is, however, in this earliest and rudest state of civil government only only that profit has ever made the principal part of the public re- CHAP. venue of a monarchical state.

SMALL republics have fometimes derived a confiderable revenue from the profit of mercantile projects. The republic of Hamburgh is faid to do fo from the profits of a public wine cellar and apothecary's fhop *. The flate cannot be very great of which the fovereign has leifure to carry on the trade of a wine merchant or apothecary. The profit of a public bank has been a fource of revenue to more confiderable flates. It has been fo not only to Hamburgh, but to Venice and Amfterdam. A revenue of this kind has even by fome people been thought not below the attention of fo great an empire as that of Great Britain. Reckoning the ordinary dividend of the bank of England at five and a half per cent. and. its capital at ten millions feven hundred and eighty thousand pounds, the neat annual profit, after paying the expence of management, must amount, it is faid, to five hundred and ninety-twothousand nine hundred pounds. Government, it is pretended, could borrow this capital at three per cent. interest, and by taking the management of the bank into its own hands, might make a clear profit.of two hundred and fixty-nine thousand five hundred poundsa year. The orderly, vigilant, and parfimonious administration of fuch ariftocracies as those of Venice and Amsterdam, is extremely proper, it appears from experience, for the management of a mercantile project of this kind. But whether fuch a government as that of England; which, whatever may be its virtues, has never:

* See Memoires concernant les Droits & Impolitions en Europe : tome 1. page 73. This work was compiled by the order of the court for the ufe of a commission employed for fome years pass in confidering the proper means for reforming the finances of France. The account of the French taxes, which takes up three volumes in quarto, may be regarded as perfectly authentic. That of those of other European nations was compiled from fuch informations as the French ministers at the different courts could procure. It is much shorter, and probably not quite so exact as that of the French taxes.

been

воок

416

been famous for good œconomy; which, in time of peace, has generally conducted itfelf with the flothful and negligent profusion that is perhaps natural to monarchies; and in time of war has conflantly acted with all the thoughtless extravagance that democracies are apt to fall into; could be fafely trufted with the management of fuch a project must at least be a good deal more doubtful.

THE post office is properly a mercantile project. The government advances the expence of establishing the different offices, and of buying or hiring the necessary horses or carriages, and is repaid with a large profit by the duties upon what is carried. It is perhaps the only mercantile project which has been successfully managed by, I believe, every fort of government. The capital to be advanced, is not very confiderable. There is no mystery in the business. The returns are not only certain, but immediate.

PRINCES, however, have frequently engaged in many other mercantile projects, and have been willing, like private perfons, to mend their fortunes by becoming adventurers in the common branches of trade. They have fcarce ever fucceeded. The profusion with which the affairs of princes are always managed, renders it almost impoffible that they fhould. The agents of a prince regard the wealth of their mafter as inexhauftible; are carelefs at what price they buy; are carelefs at what price they fell; are carelefs at what expence they transport his goods from one place to another. Those agents frequently live with the profusion of princes, and fometimes too, in spite of that profusion, and by a proper method of making up their accounts, acquire the fortunes of princes. It was thus, as we are told by Machiavel, that the agents of Lorenzo of Medicis, not a prince of mean abilities, carried on his trade. The republic of Florence was feveral times obliged to pay the debt into which their extravagance had

had involved him. He found it convenient, accordingly, to give up the bufinefs of merchant, the bufinefs to which his family had originally owed their fortune, and in the latter part of his life to employ both what remained of that fortune, and the revenue of the flate of of which he had the difpofal, in projects and expences more fuitable to his flation.

No two characters feem more inconfiftent than those of trader and fovereign. If the trading fpirit of the English East India company renders them very bad fovereigns; the spirit of fovereignty seems to have rendered them equally bad traders. While they were traders only, they managed their trade successfully, and were able to pay from their profits a moderate dividend to the proprietors of their stock. Since they became fovereigns, with a revenue which, it is faid, was originally more than three millions sterling, they have been obliged to beg the extraordinary affistance of government in order to avoid immediate bankruptcy. In their former fituation, their fervants in India confidered themselves as the clerks of merchants: In their prefent fituation, those fervants confider themselves as the ministers of fovereigns.

A STATE may fometimes derive fome part of its public revenue from the intereft of money, as well as from the profits of flock. If it has amaffed a treasure, it may lend a part of that treasure, either to foreign flates, or to its own fubjects.

THE canton of Berne derives a confiderable revenue by lending a part of its treafure to foreign flates, that is, by placing it in the public funds of the different indebted nations of Europe, chiefly in those of France and England. The fecurity of this revenue must depend, first, upon the fecurity of the funds in which it is placed, or upon the good faith of the government which has the management of them; and, fecondly, upon the certainty or pro-Vol. II. 3 H 417

CHAP.

BOOK V. bability of the continuance of peace with the debtor nation. In the cafe of a war, the very first act of hostility, on the part of the debtor nation, might be the forfeiture of the funds of its creditor. This policy of lending money to foreign states is, fo far as I know, peculiar to the canton of Berne.

> THE city of Hamburgh * has eftablished a fort of public pawnshop, which lends money to the subjects of the state upon pledges at fix per cent. interest. This pawn-shop or Lombard, as it is called, affords a revenue, it is pretended, to the state of a hundred and fifty thousand crowns, which, at sour and suppose the crown, amounts to 33,7501. starting.

THE government of Penfylvania without amaffing any treafure, invented a method of lending, not money indeed, but what is equivalent to money, to its fubjects. By advancing to private people, at interest, and upon land fecurity to double the value, paper bills of credit to be redeemed fifteen years after their date, and in the mean time made transferable from hand to hand like bank notes, and declared by act of affembly to be a legal tender in all payments from one inhabitant of the province to another, it raifed a moderate revenue, which went a confiderable way towards defraying an annual expence of about 4500 l. the whole ordinary expence of that frugal and orderly government. The fuccess of an expedient of this kind must have depended upon three different circumstances; first, upon the demand for fome other inftrument of commerce, befides gold and filver money; or upon the demand for fuch a quantity of confumable flock, as could not be had without fending abroad the greater part of their gold and filver money, in order to purchase it; fecondly, upon the good credit of the government which made use of this expedient; and, thirdly, upon the moderation with which it

* See id. ibid.

W18.

was ufed, the whole value of the paper bills of credit never exceeding that of the gold and filver money which would have been neceffary for carrying on their circulation, had there been no paper bills of credit. The fame expedient was upon different occafions adopted by feveral other American colonies: but, from want of this moderation, it produced, in the greater part of them, much more diforder than conveniency.

THE unftable and perishable nature of flock and credit, however, render them unfit to be trufted to, as the principal funds of that fure, fleady and permanent revenue, which can alone give fecurity and dignity to government. The government of no great nation, that was advanced beyond the shepherd state, feems ever to have derived the greater part of its public revenue from such fources.

LAND is a fund of a more flable and permanent nature; and the rent of public lands, accordingly, has been the principal fource of the public revenue of many a great nation that was much advanced beyond the fhepherd flate. From the produce or rent of the public lands, the antient republics of Greece and Italy derived, for a long time, the greater part of that revenue which defrayed the neceffary expences of the commonwealth. The rent of the crown lands conflituted for a long time the greater part of the revenue of the antient fovereigns of Europe.

WAR and the preparation for war, are the two circumftances which in modern times occafion the greater part of the neceffary expence of all great flates. But in the antient republics of Greece and Italy every citizen was a foldier, who both ferved and prepared himfelf for fervice at his own expence. Neither of those two circumftances, therefore, could occafion any very confiderable expence to the flate. The rent of a very moderate landed 3 H 2 eflate 419

СНАР.

420

ВООК V. eftate might be fully fufficient for defraying all the other necessary expences of government.

In the antient monarchies of Europe, the manners and cuftoms of the times fufficiently prepared the great body of the people for war; and when they took the field they were, by the condition of their feudal tenures, to be maintained, either at their own expence, or at that of their immediate lords, without bringing any new charge upon the fovereign. The other expences of government were, the greater part of them, very moderate. The administration of justice, it has been shown, instead of being a cause of expence, was a source of revenue. The labour of the country people, for three days before and for three days after harvest, was thought a fund fufficient for making and maintaining all the bridges, highways, and other public works which the commerce of the country was supposed to require. In those days the principal expence of the fovereign feems to have confifted in the maintenance of his own family and houfhold. The officers of his houshold, accordingly, were then the great officers of ftate. The lord treasurer received his rents. The lord fteward and lord chamberlain looked after the expence of his family. The care of his ftables was committed to the lord conftable and the lord marshal. His houses were all built in the form of castles, and feem to have been the principal fortreffes which he poffeffed. The keepers of those houses or castles might be confidered as a fort of military governors. They feem to have been the only military officers whom it was neceffary to maintain in time of peace. In these circumstances the rent of a great landed estate might, upon ordinary occasions, very well defray all the necessary expences of government.

In the prefent flate of the greater part of the civilized monarchies of Europe, the rent of all the lands in the country, managed

managed as they probably would be if they all belonged to one proprietor, would fcarce perhaps amount to the ordinary revenue which they levy upon the people even in peaceable times. The ordinary revenue of Great Britain, for example, including not only what is neceffary for defraying the current expense of the year, but for paying the intereft of the public debts, and for finking a part of the capital of those debts, amounts to upwards of ten millions a year. But the land-tax, at four shillings in the pound, falls short of two millions a year. This land-tax, as it is called, however, is fuppofed to be one-fifth, not only of the rent of all the land, but of that of all the houses, and of the interest of all the capital stock of Great Britain, that part of it only excepted which is either lent to the public, or employed as farming flock in the cultivation of land. A very confiderable part of the produce of this tax arifes from the rent of houses, and the interest of capital stock. The land-tax of the city of London, for example, at four shillings in the pound, amounts to 123,3991. 6s. 7 d. That of the city of Westminster, to 63,0921. IS. 5d. That of the palaces of Whitehall and St. James's, to 30,7541. 6s. 3d. A certain proportion of the land-tax is in the fame manner affeffed upon all the other cities and townscorporate in the kingdom, and arifes almost altogether, either from. the rent of houfes, or from what is supposed to be the interest of trading and capital flock. According to the effimation, therefore, by which Great Britain is rated to the land-tax, the whole mafs of revenue arising from the rent of all the lands, from that of all the houses, and from the interest of all the capital stock, that part of it only excepted which is, either lent to the public, or employed in the cultivation of land, does not exceed ten millions fterling a year, the ordinary revenue which government levies upon the people even inpeaceable times. The effimation by which Great Britain is rated to the land-tax is, no doubt, taking the whole kingdom at any average, very much below the real value; though in feveral particular 3

ÇHAP.

TT.

an and

BOOK V.

ticular counties and diffricts it is faid to be nearly equal to that value. The rent of the lands alone, exclusive of that of houses, and of the interest of stock, has by many people been estimated at twenty millions, an estimation made in a great measure at random, and which, I apprehend, is as likely to be above as below the truth. But if the lands of Great Britain, in the present state of their cultivation, do not afford a rent of more than twenty millions a year, they could not well afford the half, most probably not the fourth part of that rent, if they all belonged to a single proprietor, and were put under the negligent, expensive, and oppressive management of his factors and agents. The crown lands of Great Britain do not at present afford the fourth part of the rent, which could probably be draws from them, if they were the property of private persons. If the crown lands were more extensive, it is probable, they would be still worfe managed.

THE revenue which the great body of the people derives from land is in proportion, not to the rent, but to the produce of the land. The whole annual produce of the land of every country, if we except what is referved for feed, is either annually confumed by the great body of the people, or exchanged for fomething elfe that is confumed by them. Whatever keeps down the produce of the land below what it would otherwife rife to, keeps down the revenue of the great body of the people, still more than it does that of the proprietors of land. The rent of land, that portion of the produce which belongs to the proprietors, is fcarce any where in Great Britain fupposed to be more than a third part of the whole produce. If the land, which in one flate of cultivation affords a rent of ten millions flerling a year, would in another afford a rent of twenty millions; the rent being, in both cafes, fuppofed a third part of the produce; the revenue of the proprietors would be lefs than it otherwife might be by ten millions a year only; but the revenue of the great body of the people

ple would be lefs than it otherwife might be by thirty millions a year, deducting only what would be neceffary for feed. The population of the country would be lefs by the number of people which thirty millions a year, deducting always the feed, could maintain, according to the particular mode of living and expence which might take place in the different ranks of men among whom the remainder was diffributed.

THOUGH there is not at prefent, in Europe, any civilized flate of any kind which derives the greater part of its public revenue from the rent of lands which are the property of the flate; yet, in all the great monarchies of Europe, there are still many large tracts of land which belong to the crown. They are generally forest; and fometimes forest where, after travelling feveral miles, you will fcarce find a fingle tree; a mere wafte and lofs of country in refpect both of produce and population. In every great monarchy of Europe the fale of the crown lands would produce a very large fum of money, which, if applied to the payment of the public debts, would deliver from mortgage a much greater revenue than. any which those lands have ever afforded to the crown. In countries where lands, improved and cultivated very highly, and yielding. at the time of fale as great a rent as can eafily be got from them, commonly fell at thirty years purchafe; the unimproved, uncultivated, and low-rented crown lands might well be expected to fell at forty, fifty, or fixty years purchase. The crown might immediately enjoy the revenue which this great price would redeem frommortgage. In the course of a few years it would probably enjoy another revenue. When the crown lands had become private property, they would, in the course of a few years, become wellimproved and well-cultivated. The increase of their produce would. increase the population of the country, by augmenting the revenueand confumption of the people. But the revenue which the crown. derives

CHAP.

воок

derives from the duties of cuftoms and excife, would neceffarily increase with the revenue and confumption of the people. -----

> THE revenue which, in any civilized monarchy, the crown derives from the crown lands, though it appears to coft nothing to individuals, in reality cofts more to the fociety than perhaps any other equal revenue which the crown enjoys. It would, in all cafes, be for the interest of the society to replace this revenue to the crown by fome other equal revenue, and to divide the lands among the people, which could not well be done better, perhaps, than by exposing them to public fale.

> LANDS, for the purpofes of pleafure and magnificence, parks, gardens, public walks, &c. poffeffions which are every where confidered as caufes of expence, not as fources of revenue, feem to be the only lands which, in a great and civilized monarchy, ought to belong to the crown.

> PUBLIC flock and public lands, therefore, the two fources of revenue which may peculiarly belong to the fovereign or commonwealth, being both improper and infufficient funds for defraying the neceffary expence of any great and civilized flate; it remains that this expence must, the greater part of it, be defrayed by taxes of one kind or another; the people contributing a part of their own private revenue in order to make up a public revenue to the fovereign or commonwealth.

PART II. Of Taxes.

THE private revenue of individuals, it has been shewn in the , first book of this inquiry, arifes ultimately from three different fources; Rent, Profit, and Wages. Every tax must finally be paid from

from fome one, or other of those three different forts of revenue, or from all of them indifferently. I shall endeavour to give the best account I can, first, of those taxes which, it is intended, should fall upon rent; fecondly, of those which, it is intended, should fall upon profit; thirdly, of those which, it is intended, should fall upon wages; and, fourthly, of those which, it is intended, should fall indifferently upon all those three different fources of private revenue. The particular confideration of each of these four different forts of taxes will divide the fecond part of the prefent chapter into four articles, three of which will require feveral other fubdivisions. Many of those taxes, it will appear from the following review, are not finally paid from the fund, or fource of revenue, upon which it was intended they should fall.

BEFORE I enter upon the examination of particular taxes, it is neceffary to premife the four following maxims with regard to taxes in general.

I. The fubjects of every flate ought to contribute towards the fupport of the government, as nearly as possible, in proportion to their refpective abilities; that is, in proportion to the revenue which they respectively enjoy under the protection of the flate. The expence of government to the individuals of a great nation, is like the expence of management to the joint tenants of a great eftate, who are all obliged to contribute in proportion to their respective interests in the estate. In the observation or neglect of this maxim confifts, what is called the equality or inequality of taxation. Every tax, it must be observed once for all, which falls finally upon one only of the three forts of revenue above-mentioned, is neceffarily unequal, in fo far as it does not affect the other two. In the following examination of different taxes I shall feldom take much further notice of this fort of inequality, but shall, VOL. II. in 3 I

LOOK in most cases, confine my observations to that inequality which is occasioned by a particular tax falling unequally even upon that particular fort of private revenue which is affected by it.

II. THE tax which each individual is bound to pay ought to be certain, and not arbitrary. The time of payment, the manner of payment, the quantity to be paid, ought all to be clear and plain to the contributor, and to every other perfon. Where it is otherwife, every perfon fubject to the tax is put more or lefs in the power of the tax-gatherer, who can either aggravate the tax upon any obnoxious contributor, or extort, by the terror of fuch aggravation, fome prefent or perquifite to himfelf. The uncertainty of taxation encourages the infolence and favours the corruption of an order of men who are naturally unpopular, even where they are neither infolent nor corrupt. The certainty of what each individual ought to pay is, in taxation, a matter of fo great importance, that a very confiderable degree of inequality, it appears, I believe, from the experience of all nations, is not near fo great an evil as a very fmall degree of uncertainty.

III. EVERY tax ought to be levied at the time, or in the manner in which it is most likely to be convenient for the contributor to pay it. A tax upon the rent of land or of houses, payable at the fame term at which such rents are usually paid, is levied at the time when it is most likely to be convenient for the contributor to pay; or, when he is most likely to have wherewithal to pay. Taxes upon such confumable goods are as articles of luxury, are all finally paid by the confumer, and generally in a manner that is very convenient for him. He pays them by little and little, as he has occasion to buy the goods. As he is at liberty too, either to buy, or not to buy as he pleases, it must be his own fault if he ever suffers any confiderable inconveniency from fuch taxes.

IV. EVERY

IV. EVERY tax ought to be fo contrived as both to take out and CHAP. to keep out of the pockets of the people as little as possible, over and above what it brings into the public treafury of the flate. A tax may either take out or keep out of the pockets of the people a great deal more than it brings into the public treafury, in the four following ways. First, the levying of it may require a great number of officers, whole falaries may cat up the greater part of the produce of the tax, and whole perquifites may impole another additional tax upon the people. Secondly, it may obstruct the industry of the people, and difcourage them from applying to certain branches of bufinefs which might give maintenance and employment to great multitudes. While it obliges the people to pay, it may thus diminish, or perhaps deftroy fome of the funds, which might enable them more eafily to do fo-Thirdly, by the forfeitures and other penalties which those unfortunate individuals incur who attempt unfuccefsfully to evade the tax, it may frequently ruin them, and thereby put an end to the benefit which the community might have received from the employment of their capitals. An injudicious tax offers a great temptation to fmuggling. But the penalties of fmuggling must rife in proportion to the temptation. The law, contrary to all the ordinary principles of juffice, first creates the temptation, and then punishes those who yield to it; and it commonly enhances the punishment too in proportion to the very circumstance which ought certainly to . alleviate it, the temptation to commit the crime*. Fourthly, by fubjecting the people to the frequent vifits, and the odious examination of the tax-gatherers, it may expose them to much unnecessary trouble, vexation, and oppreffion; and though vexation is not, flrictly fpeaking, expence, it is certainly equivalent to the expence at which every man would be willing to redeem himfelf from it. It is in fome one or other of thefe four different ways that taxes are frequently fo much more burdenfome to the people than they are beneficial to the fovereign.

* See Sketches of the Hiftory of Man, page 474. & feq.

3 I 2

THE

428 воок

THE evident juffice and utility of the foregoing maxims have recommended them more or lefs to the attention of all nations. All nations have endeavoured, to the beft of their judgment, to render their taxes as equal as they could contrive; as certain, as convenient to the contributor, both in the time and in the mode of payment, and, in proportion to the revenue which they brought to the prince, as little burdenfome to the people. The following fhort review of fome of the principal taxes which have taken place in different ages and countries will fhow that the endeavours of all nations have not in this refpect been equally fuccefsful.

ARTICLE J.

Taxes upon rent. Taxes upon the rent of Land.

A TAX upon the rent of land may either be impofed according, to a certain canon, every diffrict being valued at a certain rent, which valuation is not afterwards to be altered; or it may be impofed in fuch a manner as to vary with every variation in the real rent of the land, and to rife or fall with the improvement or declenfion of its cultivation.

A LAND tax which, like that of Great Britain, is affeffed uponeach diftrict according to a certain invariable canon, though it fhould be equal at the time of its firft eftablifhment, neceffarily becomes unequal in procefs of time, according to the unequal degrees of improvement or neglect in the cultivation of the different parts of the country. In England, the valuation according to which the different counties and parifhes were affeffed to the landtax by the 4th of William and Mary was very unequal even at its firft eftablifhment. This tax, therefore, fo far offends againft the firft of the four maxims above-mentioned. It is perfectly agreeable to the other three. It is perfectly certain. The time of payment for the tax, being the fame as that for the rent, is as convenient

convenient as it can be to the contributor. Though the landlord is in all cafes the real contributor, the tax is commonly advanced by the tenant, to whom the landlord is obliged to allow it in the payment of the rent. This tax is levied by a much finaller number of officers than any other which affords nearly the fame revenue. As the tax upon each district does not rife with the rife of the rent, the fovereign does not share in the profits of the landlord's improvements. They contribute, indeed, to the difcharge of the other landlords of the diffrict. But the aggravation of the tax, which this may fometimes occasion upon a particular estate, is always fo very fmall, that it never can difcourage those improvements, nor keep down the produce of the land below what it would otherwife rife to. As it has notendency to diminish the quantity, it can have none to raise the price of that produce. It does not obstruct the industry of the people. It. fubjects the landlord to no other inconveniency befides the unavoidable. one of paying the tax.

THE advantage, however, which the landlord has derived from the invariable conftancy of the valuation by which all the lands of Great Britain are rated to the land-tax, has been principally owing to fome circumftances altogether extraneous to the nature of the tax.

It has been owing in part to the great profperity of almost every part of the country, the rents of almost all the effates of Great Britainhaving, fince the time when this valuation was first effablished, been continually rising, and fearce any of them having fallen. The landlords, therefore, have almost all gained the difference between the tax which they would have paid, according to the prefent rent of their effates, and that which they actually pay according to the ancient valuation. Had the state of the country been different, had rents been gradually falling in confequence of the deelension of cultivation, the landlords would almost all have loss this difference. In the state of things which has happened to take place fince the revolution, the conflancy of the valuation has been advantageous to the landlord

429

СНАР.

BOOK landlord and hurtful to the fovereign. In a different flate of things it might have been advantageous to the fovereign and hurtful to the landlord.

430

As the tax is made payable in money, fo the valuation of the land is expressed in money. Since the establishment of this valuation the value of filver has been pretty uniform, and there has been no alteration in the flandard of the coin either as to weight or fineness. Had filver rifen confiderably in its value, as it feems to have done in the courfe of the two centuries which preceded the difcovery of the mines of America, the conftancy of the valuation might have proved very oppreffive to the landlord. Had filver fallen confiderably in its value, as it certainly did for about a century at least after the discovery of those mines, the same constancy of valuation would have reduced very much this branch of the revenue of the fovereign. Had any confiderable alteration been made in the standard of the money, either by finking the fame quantity of filver to a lower denomination, or by raifing it to a higher; had an ounce of filver, for example, inftead of being coined into five fhillings and twopence, been coined, either into pieces which bore fo low a denomination as two shillings and feven-pence, or into pieces which bore fo high a one as ten shillings and four pence, it would in the one cafe have hurt the revenue of the proprietor, in the other that of the fovereign.

IN circumftances, therefore, fomewhat different from those which have actually taken place, this conftancy of valuation might have been a'very great inconveniency, either to the contributors, or to the commonwealth. In the courfe of ages fuch circumftances, however, muft, at fome time or other, happen. But though empires, like all the other works of men, have all hitherto proved mortal, yet every empire aims at immortality. Every conflictution, therefore, which it is meant should be as permanent as the empire itfelf, ought to be convenient, not in certain circumftances only,

but

but in all circumftances; or ought to be fuited, not to those circum- C H A P. ftances which are transitory, occasional, or accidental, but to those under the which are necessary and therefore always the fame.

A TAX upon the rent of land which varies with every variation of the rent, or which rifes and falls according to the improvement or neglect of cultivation, is recommended by that fect of men of letters in France, who call themfelves the occonomifts, as the moft equitable of all taxes. All taxes, they pretend, fall ultimately upon the rent of land, and ought therefore to be impofed equally upon the fund which muft finally pay them. That all taxes ought to fall as equally as poffible upon the fund which muft finally pay them, is certainly true. But without entering into the difagreeable difcuffion of the metaphyfical arguments by which they fupport their very ingenious theory, it will fufficiently appear from the following review, what are the taxes which fall finally upon the rent of the land, and what are thofe which fall finally upon fome other fund.

In the Venetian territory all the arable lands which are given in leafe to farmers are taxed at a tenth of the rent*. The leafes are recorded in a public register which is kept by the officers of revenue in each province or district. When the proprietor cultivates his own lands, they are valued according to an equitable estimation and he is allowed a deduction of one-fifth of the tax, fo that for fuchlands he pays only eight instead of ten per cent. of the fupposed rent.

A LAND-TAX of this kind is certainly more equal than the land-tax of England. It might not, perhaps, be altogether fo certain, and the afferfment of the tax might frequently occasion a

* Memoires concernant les Droits, p. 240, 241.

good

439

 $\stackrel{\text{BOOK}}{V_{\bullet}}$ good deal more trouble to the landlord. It might too be a good deal more expensive in the levying.

SUCH a fystem of administration, however, might perhaps be contrived as would, in a great measure, both prevent this uncertainty and moderate this expence.

THE landlord and tenant, for example, might jointly be obliged to record their leafe in a public register. Proper penalties might be enacted against concealing or misrepresenting any of the conditions; and if part of those penalties was to be paid to either of the two parties who informed against and convicted the other of such concealment or misrepresentation, it would effectually deter them from combining together in order to defraud the public revenue. All the conditions of the lease might be fufficiently known from such a record.

SOME landlords, inftead of raifing the rent, take a fine for the renewal of the leafe. This practice is in moft cafes the expedient of a fpendthrift, who for a fum of ready money fells a future revenue of much greater value. It is in moft cafes, therefore, hurtful to the landlord. It is frequently hurtful to the tenant, and it is always hurtful to the community. It frequently takes from the tenant fo great a part of his capital, and thereby diminifhes fo much his ability to cultivate the land, that he finds it more difficult to pay a finall rent than it would otherwife have been to pay a great one. Whatever diminifhes his ability to cultivate, neceffarily keeps down, below what it would otherwife have been, the moft important part of the revenue of the community. By rendering the tax upon fuch fines a good deal heavier than upon the ordinary rent, this hurtful practice might be difcouraged to the no fmall advantage of

CHAP. of all the different parties concerned, of the landlord, of the tenant, of the fovercign. and of the whole community.

SOME leafes prescribe to the tenant a certain mode of cultivation, and a certain fucceffion of crops during the whole continuance of the leafe. This condition, which is generally the effect of the landlord's conceit of his own fuperior knowledge (a conceit in most cafes very ill founded), ought always to be confidered as an additional rent; as a rent in fervice inftead of a rent in money. In order to difcourage the practice, which is generally a foolifh one, this fpecies of rent might be valued rather high, and confequently taxed fomewhat higher than common money rents. 11.

SOME landlords, inftead of a rent in money, require a rent in kind, in corn, cattle, poultry, wine, oil, &c. others again require a rent in fervice. Such rents are always more hurtful to the tenant than beneficial to the landlord. They either take more or keep more out of the pocket of the former, than they put into that of the latter. In every country where they take place, the tenants are poor and beggarly, pretty much according to the degree in which they, take place. By valuing, in the fame manner, fuch rents rather high, and confequently taxing them fomewhat higher than common money-rents, a practice which is hurtful to the whole community might perhaps be fufficiently difcouraged.

WHEN the landlord chose to occupy himself a part of his own lands, the rent might be valued according to an equitable arbitration of the farmers and landlords in the neighbourhood, and a moderate abatement of the tax might be granted to him in the fame manner'as in the Venetian territory; provided the rent of the lands which he occupied did not exceed a certain fum. It is of importance that the landlord fhould be encouraged to cultivate a part of VOL. II. 3 K his

433

H.

434

his own land. His capital is generally greater than that of the BOOK tenant, and with less skill he can frequently raife a greater produce. The landlord can afford to try experiments, and is generally difpofed to do fo. His unfuccessful experiments occasion only a moderate loss to himfelf. His fuccefsful ones contribute to the improvement and better cultivation of the whole country. It might be of importance, however, that the abatement of the tax should encourage him to cultivate to a certain extent only. If the landlords fhould, the greater part of them, be tempted to farm the whole of their own lands, the country (inftead of fober and industrious tenants who are bound by their own intereft to cultivate as well as their capital and fkill will allow them) would be filled with idle and profligate bailiffs, whofe abufive management would foon degrade the cultivation, and reduce the annual produce of the land, to the diminution, not only of the revenue of their masters, but of the most important part of that of the whole fociety.

> SUCH a fystem of administration might, perhaps, free a tax of this kind from any degree of uncertainty which could occasion, either oppression, or inconveniency to the contributor; and might at the same time ferve to introduce into the common management of land, such a plan or policy as might contribute a good deal to the general improvement and good cultivation of the country.

> THE expence of levying a land-tax, which varied with every variation of the rent, would no doubt be fomewhat greater than that of levying one which was always rated according to a fixed valuation. Some additional expence would neceffarily be incurred both by the different regifter offices which it would be proper to eftablish in the different diffricts of the country, and by the different valuations which might occasionally be made of the lands which the proprietor chose to occupy himfelf. The expence of all this, however, mightbe

be very moderate, and much below what is incurred in the levying C H A P. of many other taxes, which afford a very inconfiderable revenue in comparison of what might eafily be drawn from a tax of this kind.

THE difcouragement which a variable land-tax of this kind might give to the improvement of land, feems to be the most important objection which can be made to it. The landlord would certainly be lefs difpofed to improve, when the fovereign, who contributed nothing to the expence, was to fhare in the profit of the improvement. Even this objection might perhaps be obviated by allowing the landlord, before he began his improvement, to afcertain, in conjunction with the officers of revenue, the actual value of his lands, according to the equitable arbitration of a certain number of landlords and farmers in the neighbourhood, equally chosen by both parties; and by rating him according to this valuation for fuch a number of years. as might be fully fufficient for his complete indemnification. To draw the attention of the fovereign towards the improvement of the land, from a regard to the increase of his own revenue, is one of the principal advantages proposed by this species of land-tax. The term, therefore, allowed for the indemnification of the landlord, ought not to be a great deal longer than what was neceffary for that purpose; left the remoteness of the interest should discourage too much this attention. It had better, however, be fomewhat too long than in any respect too short. No incitement to the attention of the fovereign can ever counterbalance the fmallest difcouragement to that of the landlord. The attention of the fovereign can be at beft but a very general and vague confideration of what is likely to contribute to the better cultivation of the greater part of his dominions. The attention of the landlord is a particular and minute confideration of what is likely to be the most advantageous application of every inch of ground upon his eflate. The principal attention of the fovereign ought to be to encourage, by 3K 2 every

BOOK every means in his power, the attention both of the landlord and of the farmer; by allowing both to purfue their own interest in Burners y managed their own way, and according to their own judgment; by giving to both the most perfect fecurity that they shall enjoy the full recompence of their own industry; and by procuring to both the most extensive market for every part of their produce, in confequence of establishing the easiest and fafest communications both by land and by water, through every part of his own dominions, as well as the most unbounded freedom of exportation to the dominions of all other princes.

> IF by fuch a fyftem of administration a tax of this kind could be fo managed as to give, not only no difcouragement, but, on the contrary, fome encouragement to the improvement of land, it does not appear likely to occafion any other inconveniency to the landlord, except always the unavoidable one of being obliged to pay the tax.

> In all the variations of the flate of the fociety, in the improvement and in the declenfion of agriculture; in all the variations in the value of filver, and in all those in the standard of the coin, a tax of this kind would, of its own accord and without any attention of government, readily fuit itfelf to the actual fituation of things, and would be equally just and equitable in all those different changes. It would, therefore, be much more proper to be established as a perpetual and unalterable regulation, or as what is called a fundamental law of the commonwealth, than any tax which was always to be levied according to a certain valuation.

Some flates, inftead of the fimple and obvious expedient of a register of leafes, have had recourse to the laborious and expensive

one

436

V.

one of an actual furvey and valuation of all the lands in the country. C H A P. They have fulpected, probably, that the leffor and leffce, in order to defraud the public revenue, might combine to conceal the real terms of the leafe. Doomfday-book feems to have been the refult of a very accurate furvey of this kind.

In the antient dominions of the king of Pruffia, the land-tax is affeffed according to an actual furvey and valuation, which is reviewed and altered from time to time *. According to that valuation, the lay proprietors pay from twenty to twenty-five per cent. of their revenue. Ecclefiaftics from forty to forty-five per cent. The furvey and valuation of Silefia was made by order of the prefent king; it is faid with great accuracy. According to that valuation the lands belonging to the bifhop of Breflaw are taxed at twenty-five per cent. of their rent. The other revenues of the ecclefiaftics of both religions, at fifty per cent. The commanderies of the Teutonic order and of that of Malta, at forty per cent. Lands held by a noble tenure, at thirty-eight and one-third per cent. Lands held by a bafe tenure, at thirty-five and one-third per cent.

THE furvey and valuation of Bohemia is faid to have been the work of more than a hundred years. It was not perfected till after the peace of 1748, by the orders of the prefent empress queen \dagger . The furvey of the dutchy of Milan, which was begun in the time of Charles VI., was not perfected till after 1760. It is effected one of the most accurate that has ever been made. The furvey of Savoy and Piedmont was executed under the orders of the late king of Sardinia \ddagger .

IN

воок V.

438

In the dominions of the king of Pruffia the revenue of the church is taxed much higher than that of lay proprietors. The revenue of the church is, the greater part of it, a burden upon the rent of land. It feldom happens that any part of it is applied towards the improvement of land; or is fo employed as to contribute in any refpect towards increasing the revenue of the great body of the people. His Pruffian majefty had probably, upon that account, thought it reafonable that it fhould contribute a good deal more towards relieving the exigencies of the flate. In fome countries the lands of the church are exempted from all taxes. In others they are taxed more lightly than other lands. In the dutchy of Milan, the lands which the church poffeffed before 1575, are rated to the tax at a third only of their value.

IN Silefia, lands held by a noble tenure are taxed three per cent. higher than those held by a base tenure. The honours and privileges of different kinds annexed to the former, his Prussian majesty had probably imagined, would sufficiently compensate to the proprietor a finall aggravation of the tax; while at the same time the humiliating inferiority of the latter would be in some measure alleviated by being taxed somewhat more lightly. In other countries, the system of taxation, instead of alleviating, aggravates this inequality. In the dominions of the king of Sardinia, and in those provinces of France which are subject to what is called the Real or predial taille, the tax falls altogether upon the lands held by a base tenure. Those held by a noble one are exempted.

A LAND-TAX affeffed according to a general furvey and valuation, how equal foever it may be at first, must, in the course of a very moderate period of time, become unequal. To prevent its becoming fo would require the continual and painful attention of government to all the variations in the state and produce of every

every different farm in the country. The governments of Pruffia, of Bohemia, of Sardinia, and of the dutchy of Milan, actually exert an attention of this kind; an attention fo unfuitable to the nature of government, that it is not likely to be of long continuance, and which, if it is continued, will probably in the long-run occafion much more trouble and vexation than it can poffibly bring relief to the contributors.

IN 1666, the generality of Montauban was affeffed to the Real or predial tallie according, it is faid, to a very exact furvey and valuation *. By 1727, this affeffment had become altogether unequal. In order to remedy this inconveniency, government has found no better expedient than to impofe upon the whole generality an additional tax of a hundred and twenty thousand livres. This additional tax is rated upon all the different diffricts fubject to the tallie according to the old affeffment. But it is levied only upon those which in the actual flate of things are by that affeitment under-taxed, and it is applied to the relief of those which by the same affeliment are overtaxed. Two diffricts, for example, one of which ought in the actual fate of things to be taxed at nine hundred, the other at eleven hundred livres, are by the old affeffment both taxed at a thousand livres. Both these districts are by the additional tax rated at eleven hundred livres each. But this additional tax is levied only upon the diffrict under-charged, and it is applied altogether to the relief of that overcharged, which confequently pays only nine hundred livres. The government neither gains nor lofes by the additional tax, which is applied together to remedy the inequalities arising from the old affessment. The application is pretty much regulated according to the difcretion of the intendant of the generality, and mult, therefore, be in a great measure arbitrary.

Taxes:

440 воок

Taxes which are proportioned, not to the Rent, but to the produce of Land.

> TAXES upon the produce of land are in reality taxes upon the rent; and though they may be originally advanced by the farmer, are finally paid by the landlord. When a certain portion of the produce is to be paid away for a tax, the farmer computes, as well as he can, what the value of this portion is, one year with another, likely to amount to, and he makes a proportionable abatement in the rent which he agrees to pay to the landlord. There is no farmer who does not compute beforehand what the church tythe, which is a landtax of this kind, is, one year with another, likely to amount to.

THE tythe, and every other land-tax of this kind, under the appearance of perfect equality, are very unequal taxes; a certain portion of the produce being, in different fituations, equivalent to a very different portion of the rent. In fome very rich lands the produce is fo great, that the one half of it is fully fufficient to replace to the farmer his capital employed in cultivation, together with the ordinary profits of farming flock in the neighbourhood. The other half, or, what comes to the fame thing, the value of the other half, he could afford to pay as rent to the landlord, if there was no tythe. But if a tenth of the produce is taken from him in the way of tythe, he must require an abatement of the fifth part of this rent, otherwife he cannot get back his capital with the ordinary profit. In this cafe the rent of the landlord, inflead of amounting to a half, or five-tenths of the whole produce, will amount only to four tenths of it. In poorer lands, on the contrary, the produce is fometimes fo fmall, and the expence of cultivation fo great, that it requires four-fifths of the whole produce to replace to the farmer his capital with the ordinary profit. In this cafe,

cafe, though there was no tythe, the rent of the landlord could C H A P. amount to no more than one fifth or two-tenths of the whole produce. But if the farmer pays one-tenth of the produce in the way of tythe, he muft require an equal abatement of the rent of the landlord, which will thus be reduced to one-tenth only of the whole produce. Upon the rent of rich lands, the tythe may fometimes be a tax of no more than one-fifth part, or four fhillings in the pound; whereas, upon that of poorer lands, it may fometimes be a tax of one-half, or of ten fhillings in the pound.

THE tythe, as it is frequently a very unequal tax upon the rent, fo it is always a great difcouragement both to the improvements of the landlord and to the cultivation of the farmer. The one cannot venture to make the moft important, which are generally the moft expensive improvements; nor the other to raife the moft valuable, which are generally too the moft expensive crops; when the church, which lays out no part of the expence, is to fhare fo very largely in the profit. The cultivation of madder was for a long time confined by the tythe to the United Provinces, which, being prefbyterian countries, and upon that account exempted from this deftructive tax, enjoyed a fort of monopoly of that useful dying drug againft the reft of Europe. The late attempts to introduce the culture of this plant into England, have been made only in confequence of the ftatute which enacted that five fhillings an acre fhould be received in lieu of all manner of tythe upon madder.

As through the greater part of Europe, the church, fo in many different countries of Afia, the flate, is principally fupported by a land-tax, proportioned, not to the rent, but to the produce of the land. In China, the principal revenue of the fovereign confifts in a tenth part of the produce of all the lands of the empire. This tenth part, however, is effimated fo very moderately, that, in many pro-Vol. I. <u>3</u> L vinces,

vinces, it is faid not to exceed a thirtieth part of the ordinary produce. The land-tax or land rent which ufed to be paid to the Mahometan government of Bengal, before that country fell into the hands of the Englifh Eaft India company, is faid to have amounted to about a fifth part of the produce. The land-tax of antient Egypt is faid likewife to have amounted to a fifth part.

IN Afia, this fort of land-tax is faid to interest the fovereign in the improvement and cultivation of land. The fovereigns of China, those of Bengal while under the Mahometan government, and those of antient Egypt, are faid accordingly to have been extremely attentive to the making and maintaining of good roads and navigable canals, in order to increase, as much as possible, both the quantity and value of every part of the produce of the land, by procuring to every part of it the most extensive market which their own dominions could afford. The tythe of the church is divided into fuch fmall portions, that no one of its proprietors can have any interest of this kind. The parson of a parish could never find his account in making a road or canal to a diftant part of the country, in order to extend the market for the produce of his own particular parish. Such taxes, when destined for the maintenance of the flate, have fome advantages which may ferve in fome measure to balance their inconveniency. When deflined for the maintenance of the church, they are attended with nothing but inconveniency.

TAXES upon the produce of land may be levied, either in kind; or, according to a certain valuation, in money.

THE parfon of a parish, or a gentleman of small fortune who lives upon his estate, may sometimes, perhaps, find some advantage in receiving, the one his tythe, and the other his rent, in kind. The

442

BOOK

The quantity to be collected, and the diffrict within which it is to be collected, are fo finall, that they both can overfee, with their own eyes, the collection and disposal of every part of what is due to them. A gentleman of great fortune, who lived in the capital, would be in danger of fuffering much by the neglect, and more by the fraud, of his factors and and agents, if the rents of an estate in a diftant province were to be paid to him in this manner. The lofs of the fovereign, from the abufe and depredation of his tax-gatherers, would necefiarily be much greater. The fervants of the moft careless private perfon are, perhaps, more under the eye of their mafter than those of the most careful prince; and a public revenue, which was paid in kind, would fuffer fo much from the mifmanagement of the collectors, that a very fmall part of what was levied upon the people would ever arrive at the treafury of the prince. Some part of the public revenue of China, however, is faid to be paid in this manner. The Mandarins and other taxgatherers will, no doubt, find their advantage in continuing the piactice of a payment which is fo much more liable to abufe than any payment in money.

A TAX upon the produce of land which is levied in money, may be levied either according to a valuation which varies with all the variations of the market price; or according to a fixed valuation, a bufhel of wheat, for example, being always valued at one and the fame money price, whatever may be the flate of the market. The produce of a tax levied in the former way, will vary only according to the variations in the real produce of the land, according to the improvement or neglect of cultivation. The produce of a tax levied in the latter way will vary, not only according to the variations in the produce of the land, but according to both those in the value of the precious metals, and those in the quantity of those metals which is at different times contained in 3 L 2 443

CHAP.

BOOK V.

444

coin of the fame denomination. The produce of the former will always bear the fame proportion to the value of the real produce of the land. The produce of the latter may, at different times, bear very different proportions to that value.

WHEN, instead either of a certain portion of the produce of land, or of the price of a certain portion, a certain fum of money is to be paid in full compensation for all tax or tythe; the tax becomes, in this cafe, exactly of the fame nature with the land-tax of England. It neither rifes nor falls with the rent of the land. It neither encourages nor difcourages improvement. The tythe in the greater part of those parishes which pay what is called a Modus in lieu of all other tythe, is a tax of this kind. During the Mahometan government of Bengal, inftead of the payment in kind of a fifth part of the produce, a modus, and, it is faid, a very moderate one, was established in the greater part of the districts or zemindaries of the country. Some of the fervants of the East India company, under pretence of reftoring the public revenue to its proper value, have, in fome provinces, exchanged this modus for a payment in kind. Under their management this change is likely both to difcourage cultivation, and to give new opportunities for abufe in the collection of the public revenue, which has fallen very muchbelow what it was faid to have been, when it first fell under the management of the company. The fervants of the company may, perhaps, have profited by this change, but at the expence, it is probable, both of their mafters and of the country.

Taxes upon the Rent of Houses.

THE rent of a houfe may be diffinguished into two parts, of which the one may very properly be called the Building rent; the other is commonly called the Ground rent.

THE

THE building rent is the intereft or profit of the capital expended in building the houfe. In order to put the trade of a builder upon a level with other trades, it is neceffary that this rent fhould be fufficient, first, to pay him the fame interest which he would have get for his capital if he had lent it upon good fecurity; and, fecondly, to keep the house in constant repair, or, what comes to the fame thing, to replace, within a certain term of years, the capital which had been employed in building it. The building rent, or the ordinary profit of building is, therefore, every where regulated by the ordinary intereft of money. Where the market rate of interest is four per cent. the rent of a house which, over and above paying the ground rent, affords fix, or fix and a half per cent. upon the whole expence of building, may perhaps afford a fufficient profit to the builder. Where the market rate of interest is five per cent, it may perhaps require feven or feven and a half per cent. If, in proportion to the interest of money, the trade of the builder affords at any time a much greater profit than this, it will foon draw fo much capital from other trades as will reduce the profit to its proper level. If it affords at any time much lefs than this, other trades will foon draw fo much capital from it as will again raife. that profit.

WHATEVER part of the whole rent of a houfe is over and above. what is fufficient for affording this reafonable profit, naturally goes to the ground-rent; and where the owner of the ground and ther owner of the building are two different perfons, is, in moft cafes, completely paid to the former. This furplus rent is the price. which the inhabitant of the houfe pays for fome real or fuppofed advantage of the fituation. In country houfes, at a diffance from any great town, where there is plenty of ground to chufe upon, the ground rent is fcarce any thing, or no more than what the ground which the houfe ftands upon would pay if- employed in agriculture.

445 СНАР.

BOOK agriculture. In country villas in the neighbourhood of fome great town, it is fometimes a good deal higher; and the peculiar conveniency or beauty of fituation is there frequently very well paid for. Ground rents are generally higheft in the capital, and in those particular parts of it where there happens to be the greateft demand for houfes, whatever be the reason of that demand, whether for trade and bufiness, for pleasure and society, or for mere vanity and fashion.

> A TAX upon houfe-rent, payable by the tenant and proportioned to the whole rent of each houfe, could not, for any confiderable time at leaft, affect the building rent. If the builder did not get his reafonable profit, he would be obliged to quit the trade; which, by raifing the demand for building, would in a fhort time bring back his profit to its proper level with that of other trades. Neither would fuch a tax fall altogether upon the ground rent; but it would divide itfelf in fuch a manner as to fall, partly upon the inhabitant of the houfe, and partly upon the owner of the ground.

> LET us fuppofe, for example, that a particular perfon judges that he can afford for houfe-rent an expence of fixty pounds a year; and let us fuppofe too that a tax of four fhillings in the pound, or of one-fifth, payable by the inhabitant, is laid upon houfe-rent. A houfe of fixty pounds rent will in this cafe coft him feventy-two pounds a year, which is twelve pounds more than he thinks he can afford. He will, therefore, content himfelf with a worfe houfe, or a houfe of fifty pounds rent, which, with the additional ten pounds that he must pay for the tax, will make up the fum of fixty pounds a year, the expence which he judges he can afford; and in order to pay the tax he will give up a part of the additional conveniency which he might have had from a houfe of ten pounds a year more rent. He will give up, I fay, a part of this

this additional conveniency; for he will feldom be obliged to give up the whole, but will, in confequence of the tax, get a better house for fifty pounds a year, than he could have got if there had been no tax. For as a tax of this kind, by taking away this particular competitor, must diminish the competition for houses of fixty pounds rent, fo it must likewife diminish it for those of fifty pounds rent, and in the fame manner for those of all other rents, except the lowest rent, for which it would for fome time increase the competition. But the rents of every class of houses for which the competition was diminished, would neceffarily be more or lefs reduced. As no part of this reduction, however, could, for any confiderable time at leaft, affect the building rent; the whole of it must in the long-run neceffarily fall upon the ground-rent. The final payment of this tax, therefore, would fall, partly upon the inhabitant of the houfe, who, in order to pay his fhare, would be obliged to give up a part of his conveniency; and partly upon the owner of the ground, who, in order to pay his fhare, would be obliged to give up a part of his revenue. In 'what proportion this final payment would be di-. vided between them, it is not perhaps very eafy to afcertain. The division would probably be very different in different circumstances, and a tax of this kind might, according to those different circumflances, affect very unequally both the inhabitant of the house and the owner of the ground.

The inequality with which a tax, of this kind might fall upon the owners of different ground rents, would arife altogether from the accidental inequality of this division. But the inequality with, which it might fall upon the inhabitants of different houses would arife, not only from this, but from another cause. The proportion of the expence of house-rent to the whole expense of living, is different in the different degrees of fortune. It is perhaps higheft in the higheft degree, and it diminishes gradually through the infe-

32. 1

5

CHAP. II.

447

rior

BOOK

rior degrees, fo as in general to be loweft in the loweft degree. The neceflaries of life occafion the great expence of the poor. They find it difficult to get food, and the greater part of their little revenue is fpent in getting it. The luxuries and vanities of life occafion the principal expence of the rich; and a magnificent houfe embellifhes and fets off to the beft advantage all the other luxuries and vanities which they poffers. A tax upon houfe-rents, therefore, would in general fall heavieft upon the rich; and in this fort of inequality there would not, perhaps, be any thing very unreafonable. It is not very unreafonable that the rich fhould contribute to the public expence, not only in proportion to their revenue, but fomething more than in that proportion.

THE rent of houses, though it in some respects resembles the rent of land, is in one respect essentially different from it. The rent of land is paid for the use of a productive subject. The land which pays it produces it. The rent of houses is paid for the use of an unproductive fubject. Neither the house nor the ground which it ftands upon produce any thing. The perfon who pays the rent, therefore, must draw it from fome other fource of revenue, distinct from and independent of this subject. A tax upon the rent of houses, so far as it falls upon the inhabitants, must be drawn from the fame fource as the rent itself, and must be paid from their revenue, whether derived from the wages of labour, the profits of flock, or the rent of land. So far as it falls upon the inhabitants, it is one of those taxes which fall, not upon one only, but indifferently upon all the three different fources of revenue; and is in every respect of the same nature as a tax upon any other fort of confumable commodities. In general there is not perhaps, any one article of expence or confumption by which the liberality or narrowness of a man's whole expence can be better judged of, than by his house-rent. A proportional tax upon this

this particular article of expence might, perhaps, produce a more confiderable revenue than any which has hitherto been drawn from it in any part of Europe. If the tax indeed was very high, the greater part of people would endeavour to evade it, as much as they could, by contenting themfelves with fmaller houfes, and by turning the greater part of their expence into fome other channel.

THE rent of houses might eafily be alcertained with fufficient accuracy, by a policy of the fame kind with that which would be neceffary for afcertaining the ordinary rent of land. Houfes not inhabited ought to pay no tax. A tax upon them would fall altogether upon the proprietor, who would thus be taxed for a fubject which afforded him neither conveniency nor revenue. Houfes inhabited by the proprietor ought to be rated, not according to the expence which they might have coft in building, but according to the rent which an equitable arbitration might judge them likely to bring, if leafed to a tenant. If rated according to the expence which they may have coft in building, a tax of three or four shillings in the pound, joined with other taxes, would ruin almost all the rich and great families of this, and, I believe, of every other civilized country. Whoever will examine, with attention, the different town and country houses of fome of the richeft and greateft families in this 'country, will find that, at the rate of only fix and a half, or feven per cent. upon the original expense of building, their house-rent is nearly equal to the whole neat rent of their eftates. It is the accumulated expence of feveral fucceffive generations, laid out upon objects of great beauty and magnificence, indeed; but, in proportion to what they coft, of very fmall exchangeable value.

GROUND-RENTS are a fiill more proper fubject of taxation than the rent of houfes. A tax upon ground-rents would not VOL. II. 3 M raife **4**49

CHAP-II.

BOOK

Land

raife the rents of houfes. It would fall altogether upon the owner of the ground-rent, who acts always as a monopolift, and exacts the greatest rent which can be got for the use of his ground. More or lefs can be got for it according as the competitors happen to be richer or poorer, or can afford to gratify their fancy for a particular fpot of ground at a greater or finaller expense. In every country the greatest number of rich competitors is in the capital, and it is there accordingly that the higheft ground-rents are always to be found. As the wealth of those competitors would in no respect be increased by a tax upon ground-rents, they would not probably be difpofed to pay more for the use of the ground. Whether the tax was to be advanced by the inhabitant, or by the owner of the ground, would be of little importance. The more the inhabitant was obliged to pay for the tax, the lefs he would incline to pay for the ground; fo that the final payment of the tax would fall altogether upon the owner of the ground-rent. The ground-rents of uninhabited houfes ought to pay no tax.

Bot II ground-rents and the ordinary rent of land are a fpecies of revenue which the owner, in many cafes, enjoys without any care or attention of his own. Though a part of this revenue fhould be taken from him in order to defray the expences of the flate, no difcouragement will thereby be given to any fort of induftry. The annual produce of the land and labour of the fociety, the real wealth and revenue of the great body of the people, might be the fame after fuch a tax as before. Ground-rents, and the ordinary rent of land, are, therefore, perhaps, the fpecies of revenue which can beft bear to have a peculiar tax impofed upon them.

GROUND-RENTS feem, in this refpect, a more proper fubject of peculiar taxation than even the ordinary rent of land. The ordinary rent of land is, in many cafes, owing partly at leaft to the attention

-450

attention and good management of the landlord. A very heavy tax might difcourage too much this attention and good management. Ground-rents, fo far as they exceed the ordinary rent of land, are altogether owing to the good government of the fovereign, which, by protecting the induftry either of the whole people, or of the inhabitants of fome particular place, enables them to pay fo much more than its real value for the ground which they build their houfes upon; or to make to its owner fo much more than compenfation for the lofs which he might fuffain by this ufe of it. Nothing can be more reafonable than that a fund which owes its exiftence to the good government of the flate, fhould be taxed peculiarly, or fhould contribute fomething more than the greater part of other funds, towards the fupport of that government.

THOUGH, in many different countries of Europe, taxes have been imposed upon the rent of houses, I do not know of any in which ground-rents have been confidered as a separate subject of taxation. The contrivers of taxes have, probably, found some difficulty in associations what part of the rent ought to be confidered as groundrent, and what part ought to be confidered as building rent. It should not, however, seem very difficult to diffinguish those two parts of the rent from one another.

IN Great Britain the rent of houfes is fuppofed to be taxed in the fame proportion as the rent of land, by what is called the annual land tax. The valuation, according to which each different parifh and diffrict is affeffed to this tax, is always the fame. It was originally extremely unequal, and it ftill continues to be fo. Through the greater part of the kingdom this tax falls ftill more lightly upon the rent of houfes than upon that of land. In fome few diffricts only, which were originally rated high, and in which the rents of houfes have fallen confiderably, the land tax of three or

3 M 2

451

CHAP.

four

four fhillings in the pound, is faid to amount to an equal proportion of the real rent of houfes. Untenanted houfes, though by law fubject to the tax. are, in most districts, exempted from it by the favour of the affestors; and this exemption fometimes occasions fome little variation in the rate of particular houfes, though that of the district is always the fame. Improvements of rent; by new buildings, repairs, &c.; go to the discharge of the district, which occasions still further variations in the rate of particular houfes.

In the province of Holland * every houfe is taxed at two and a half per cent. of its value, without any regard either to the rent which it actually pays, or to the circumflance of its being tenanted or untenanted. There feems to be a hardfhip in obliging the proprietor to pay a tax for an untenanted houfe, from which he can derive no revenue; efpecially fo very heavy a tax. In Holland, where the market rate of intereft does not exceed three per cent. two and a half per cent. upon the whole value of the houfe, muft, in moft cafes, amount to more than a third of the building-rent, perhaps of the whole rent. The valuation, indeed, according to which the houfes are rated, though very unequal, is faid to be always below the real value. When a houfe is rebuilt, improved, or enlarged, there is a new valuation, and the tax is rated accordingly.

THE contrivers of the feveral taxes which in England have, at different times, been imposed upon houses, feem to have imagined that there was fome great difficulty in afcertaining, with tolerable exactness, what was the real rent of every house. They have regulated their taxes, therefore, according to fome more obvious circumftance. fuch as they had probably imagined would, in most cases, bear fome proportion to the rent.

THE fift tax of this kind was hearth-money; or a tax of two fhillings upon every hearth. In order to afcertain how many

* Memoires concernant les Droits, &c. p. 223.

hearths

452

ВООК

hearths were in the houfe, it was neceffary that the tax-gatherer C H A P. fhould enter every room in it. This odious vifit rendered the tax odious. Soon after the revolution, therefore, it was abolifhed as a badge of flavery.

THE next tax of this kind was, a tax of two fhillings upon every dwelling houfe inhabited. A houfe with ten windows to pay four fhillings more. A houfe with twenty windows and upwards to pay eight fhillings. This tax was afterwards fo far altered, that houfes with twenty windows, and with lefs than thirty, were ordered to pay ten fhillings, and thofe with thirty windows and upwards to pay twenty fhillings. The number of windows can, in most cafes, be counted from the outfide, and, in all cafes, without entering every room in the houfe. The visit of the tax-gatherer, therefore, was lefs offensive in this tax than in the hearth-money.

THIS tax was afterwards repealed, and in the room of it was effablifhed the window tax, which has undergone too feveral altrations and augmentations. The window tax, as it ftands at prefent, (January, 1775) over and above the duty of three fhillings upon every houfe in England, and of one fhilling upon every houfe in Scotland, lays a duty upon every window, which, in England, augments gradually from two-pence, the loweft rate, upon houfes with not more than feven windows; to two fhillings, the higheft rate, upon houfes with twenty-five windows and upwards.

THE principal objection to all fuch taxes is their inequality, an inequality of the worft kind, as they muft frequently fall much heavier upon the poor than upon the rich. A houfe of ten pounds rent in a country town may fometimes have more windows than a houfe of five hundred pounds rent in London; and though the inhabitant of the former is likely to be a much poorer man than that of the latter, yet fo far as his contribution is regulated by the window

454

BOOK

 V_{*}

window-tax, he must contribute more to the fupport of the state. Such taxes are, therefore, directly contrary to the first of the four maxims above mentioned. They do not seem to offend much against any of the other three.

THE natural tendency of the window-tax, and of all other taxes upon houfes, is to lower rents. The more a man pays for the tax, the lefs, it is evident, he can afford to pay for the rent. Since the impofition of the window-tax, however, the rents of houfes have upon the whole rifen, more or lefs, in almost every town and village of Great Britain, with which I am acquainted. Such has been almost every where the increase of the demand for houfes, that it has raifed the rents more than the window-tax could fink them; one of the many proofs of the great prosperity of the country, and of the increasing revenue of its inhabitants. Had it not been for the tax, rents would probably have rifen flill higher.

ARTICLE II.

Taxes upon Profit, or upon the Revenue arising from Stock.

THE revenue or profit arising from flock naturally divides itfelf into two parts; that which pays the intereft, and which belongs to the owner of the flock; and that furplus part which is over and above what is neceffary for paying the intereft.

THIS latter part of profit is evidently a fubject not taxable directly. It is the compenfation, and in moft cafes it is no more than a very moderate compenfation, for the rifk and trouble of employing the flock. The employer muft have this compenfation, otherwife he cannot, confiftently with his own intereft, continue the employment. If he was taxed directly, therefore, in proportion to the whole profit, he would be obliged either to raife raife the rate of his profit, or to charge the tax upon the intereft of CHAP. money; that is, to pay lefs intereft. If he raifed the rate of his profit in proportion to the tax, the whole tax, though it might be advanced by him, would be finally paid by one or other of two different fets of people, according to the different ways in which he might employ the flock of which he had the management. If he employed it as a farming flock in the cultivation of land, he could raife the rate of his profit only by retaining a greater portion, or, what comes to the fame thing, the price of a greater portion of the produce of the land; and as this could be done only by a reduction of rent, the final payment of the tax would fall upon the landlord. If he employed it as a mercantile or manufacturing flock, he could raife the rate of his profit only by raifing the price of his goods; in which cafe the final payment of the tax would fall altogether upon the confumers of those goods. If he did not raife the rate of his profit, he would be obliged to charge the whole tax upon that part of it which was allotted for the interest of money. He could afford lefs intereft for whatever flock he borrowed, and the whole weight of the tax would in this cafe fall ultimately upon the intereft of money. So far as he could not relieve himfelf from the tax in the one way, he would be obliged to relieve himfelf in the other.

THE interest of money feems at first fight a fubject equally capable of being taxed directly as the rent of land. Like the rent of land, it is a neat produce which remains after completely compenfating the whole rifk and trouble of employing the flock. As a tax upon the rent of land cannot raife rents; becaufe the neat produce which remains after replacing the flock of the farmer, together with his reasonable profit, cannot be greater after the tax than before it: fo, for the fame reafon, a tax upon the interest of money could not raise the rate of interest; the quantity I

455

11.

Land

quantity of flock or money in the country, like the quantity of BOOK land, being fuppofed to remain the fame after the tax as before it. The ordinary rate of profit, it has been shewn in the first book, is every where regulated by the quantity of flock to be employed in proportion to the quantity of the employment, or of the business which must be done by it. But the quantity of the employment, or of the bufinefs to be done by ftock, could neither be increafed nor diminished by any tax upon the interest of money. If the quantity of the flock to be employed, therefore, was neither increased nor diminished by it, the ordinary rate of profit would necessarily remain the fame. But the portion of this profit neceffary for compenfating the rifk and trouble of the employer, would likewife remain the fame; that rifk and trouble being in no respect altered. The refidue, therefore, that portion which belongs to the owner of the flock, and which pays the interest of money, would necessarily remain the fame too. At first fight, therefore, the interest of money feems to be a fubject as fit to be taxed directly as the rent of land.

> THERE are, however, two different circumftances which render the interest of money a much less proper subject of direct taxation than the rent of land.

> FIRST, the quantity and value of the land which any man poffeffes can never be a fecret, and can always be afcertained with great exactnefs. But the whole amount of the capital flock which he poffeffes is almost always a fecret, and can fearce ever be afcertained with tolerable exactnefs. It is liable, befides, to almost continual variations. A year feldom passes away, frequently not a month, fometimes fearce a fingle day, in which it does not rife or fall more or lefs. An inquisition into every man's private circumstances, and an inquisition which, in order to 6

accommodate the tax to them, watched over all the fluctuations of C H A P. his fortune, would be a fource of fuch continual and endlefs vexa-

SECONDLY, land is a fubject which cannot be removed; whereas flock eafily may. The proprietor of land is neceffarily a citizen of the particular country in which his estate lies. The proprietor of flock is properly a citizen of the world, and is not neceffarily attached to any particular country. He would be apt to abandon the country in which he was exposed to a vexatious inquisition, in order to be affeffed to a burdenfome tax, and would remove his flock to fome other country where he could, either carry on his bufinefs, or enjoy his fortune more at his eafe. By removing his flock he would put an end to all the industry which it had maintained in the country which he left. Stock cultivates land; flock employs labour. A tax which tended to drive away flock from any particular country, would fo far tend to dry up every fource of revenue, both to the fovereign and to the fociety. Not only the profits of flock, but the rent of land and the wages of labour, would neceffarily be more or lefs diminished by its removal.

THE nations, accordingly, who have attempted to tax the revenue arifing from flock, inflead of any fevere inquifition of this kind, have been obliged to content themfelves with fome very loofe, and, therefore, more or lefs arbitrary effimation. The extreme inequality and uncertainty of a tax affeffed in this manner, can be compenfated only by its extreme moderation, in confequence of which every man finds himfelf rated fo very much below his real revenue, that he gives himfelf little diffurbance though his neighbour fhould be rated fomewhat lower.

By what is called the land-tax in England, it was intendedthat flock fhould be taxed in the fame proportion as land.Vol. II.3 N

When the tax upon land was at four shillings in the pound, or at one-fifth of the fupposed rent, it was intended that flock fhould be taxed at one-fifth of the fuppofed intereft. When the present annual land-tax was first imposed, the legal rate of intereft was fix per cent. Every hundred pounds flock, accordingly, was supposed to be taxed at twenty-four shillings, the fifth part of fix pounds. Since the legal rate of intereft has been reduced to five per cent. every hundred pounds flock is fuppofed to be taxed at twenty shillings only. The fum to be raifed, by what is called the land-tax, was divided between the country and the principal The greater part of it was laid upon the country; and of towns what was laid upon the towns, the greater part was affeffed upon the houfes. What remained to be affeffed upon the flock or trade of the towns (for the flock upon the land was not meant to be taxed) was very much below the real value of that flock or trade. Whatever inequalities, therefore, there might be in the original affeffment, gave little difturbance. Every parish and district still continues to be rated for its land, its houfes, and its ftock, according to the original affeffment; and the almost universal profperity of the country, which in most places has raifed very much the value of all these, has rendered those inequalities of still less importance now. The rate too upon each diffrict continuing always the fame, the uncertainty of this tax, fo far as it might be affeffed upon the flock of any individual, has been very much diminished, as well as rendered of much less consequence. If the greater part of the lands of England are not rated to the land-tax at half their actual value, the greater part of the flock of England is, perhaps, fcarce rated at the fiftieth part of its actual value. In fome towns the whole land-tax is affeffed upon houfes; as in Westminster, where slock and trade are free. It is otherwife in London.

458 воок

IN

IN all countries a fevere inquifition into the circumftances of CHAP. private perfons has been carefully avoided.

AT Hamburgh* every inhabitant is obliged to pay to the flate, one-fourth per cent. of all that he poffeffes; and as the wealth of the people of Hamburgh confifts principally in flock, this tax may be confidered as a tax upon flock. Every man affeffes himfelf, and, in the prefence of the magiftrate, puts annually into the public coffer a certain fum of money, which he declares upon oath to be one-fourth per cent. of all that he poffeffes, but without declaring what it amounts to, or being liable to any examination upon that fubject. This tax is generally fuppofed to be paid with great fidelity. In a finall republic, where the people have entire confidence in their magiftrates, are convinced of the neceffity of the tax for the fupport of the flate, and believe that it will be faithfully applied to that purpofe, fuch confcientious and voluntary payment may fometimes be expected. It is not peculiar to the people of Hamburgh.

THE canton of Underwald in Switzerland is frequently ravaged by ftorms and inundations, and is thereby expoled to extraordinary expences. Upon fuch occafions the people affemble, and every one is faid to declare with the greateft franknefs what he is worth, in order to be taxed accordingly. At Zurich the law orders, that in cafes of neceffity, every one fhould be taxed in proportion to his revenue; the amount of which he is obliged to declare upon oath. They have no fufpicion, it is faid, that any of their fellow citizens will deceive them. At Bafil the principal revenue of the ftate arifes from a fmall cuftom upon goods exported. All the citizens make oath that they will pay every three months all the taxes impofed by the law. All merchants and even all inn-keepers are trufted with keeping themfelves the

> * Memoires concernant les Droits, tome i. p. 74. 3 N 2

43

account

BOOK account of the goods which they fell either within or without the v. territory. At the end of every three months they fend this account to the treafurer, with the amount of the tax computed at the bottom of it. It is not fulpected that the revenue fuffers by this confidence*.

> To oblige every citizen to declare publickly upon oath the amount of his fortune, muft not, it feems, in those Swifs cantons, be reckoned a hardship. At Hamburgh it would be reckoned the greatest. Merchants engaged in the hazardous projects of trade, all tremble at the thoughts of being obliged at all times to expose the real state of their circumstances. The ruin of their credit and the miscarriage of their projects, they foresee, would too often be the confequence. A fober and parsimonious people, who are strangers to all fuch projects, do not feel that they have occasion for any such concealment.

> IN Holland, foon after the exaltation of the late prince of Orange to the fladtholderfhip, a tax of two per cent. or the fiftieth penny, as it was called, was imposed upon the whole fubftance of every citizen. Every citizen affeffed himfelf and paid his tax in the fame manner as at Hamburgh; and it was in general fupposed to have been paid with great fidelity. The people had at that time the greatest affection for their new government, which they had just established by a general infurrection. The tax was to be paid but once; in order to relieve the flate in a particular exigency. It was, indeed, too heavy to be permanent. In a country where the market rate of interest feldom exceeds three per. cent. a tax of two per cent. amounts to thirteen shillings and fourpence in the pound upon the highest neat revenue which is commonly drawn from flock. It is a tax

> > * Id. tome i. p. 163. 166. 171.

which very few people could pay without encroaching more or lefs upon their capitals. In a particular exigency the people may, from great public zeal, make a great effort, and give up even a part of their capital, in order to relieve the flate. But it is impoffible that they floud continue to do fo for any confiderable time; and if they did, the tax would foon ruin them fo completely as to render them altogether incapable of fupporting the flate.

The tax upon flock imposed by the land-tax bill in England, tho' it is proportioned to the capital, is not intended to diminish or take away any part of that capital. It is meant only to be a tax upon the interest of money proportioned to that upon the rent of land; fo that when the latter is at four shillings in the pound, the former may be at four shillings in the pound too. The tax at Hamburgh, and the still more moderate taxes of Underwald and Zurich, are meant, in the same manner, to be taxes, not upon the capital, but upon the interest or neat revenue of stock. That of Holland was meant to be a tax upon the capital.

Taxes upon the Profit of particular Employments.

IN fome countries extraordinary taxes are imposed upon the profits of flock; fometimes when employed in particular branches of trade, and fometimes when employed in agriculture.

OF the former kind are in England the tax upon hawkers and pedlars, that upon hackney coaches and chairs, and that which the keepers of ale-houfes pay for a licence to retail ale and fpirituous liquors. During the late war, another tax of the fame kind was propofed upon fhops. The war having been undertaken, it was faid, in defence of the trade of the country, the merchants who

CHAP.

462

BOOK who were to profit by it, ought to contribute towards the fupport v. of it.

A TAX, however, upon the profits of flock employed in any particular branch of trade, can never fall finally upon the dealers (who muft in all ordinary cafes have their reafonable profit, and, where the competition is free, can feldom have more than that profit) but always upon the confumers, who muft be obliged to pay in the price of the goods the tax which the dealer advances; and generally with fome over-charge.

A TAX of this kind when it is proportioned to the trade of the dealer, is finally paid by the confumer, and occasions no oppression to the dealer. When it is not fo proportioned, but is the fame upon all dealers, though in this cafe too it is finally paid by the confumer, yet it favours the great, and occasions fome oppression to the fmall dealer. The tax of five fhillings a week upon every hackney coach, and that of ten shillings a year upon every hackney chair, fo far as it is advanced by the different keepers of fuch coaches and chairs, is exactly enough proportioned to the extent of their respective dealings. It neither favours the great, nor oppresses tha fmaller dealer. The tax of twenty shillings a year for a licence to fell ale; of forty shillings for a licence to fell spirituous liquors; and of forty shillings more for a licence to fell wine, being the fame upon all retailers, must necessarily give fome advantage to the great, and occasion fome oppression to the small dealers. The former must find it more easy to get back the tax in the price of their goods than the latter. The moderation of the tax, however, renders this inequality of lefs importance, and it may to many people appear not improper to give fome discouragement to the multiplication of little ale-houfes. The tax upon fhops, it was intended, fhould be the fame upon all shops. It could not well have been otherwife. It 6 would

CHAP. would have been impoffible to proportion with tolerable exactnefs the tax upon a fhop to the extent of the trade carried on in it, without fuch an inquifition, as would have been altogether infupportable in a free country. If the tax had been confiderable, it would have oppreffed the fmall, and forced almost the whole retail trade into the hands of the great dealers. The competition of the former being taken away, the latter would have enjoyed a monopoly of the trade; and like all other monopolifts would foon have combined to raife their profits much beyond what was neceffary for the payment of the tax. The final payment, inftead of falling upon the shopkeeper, would have fallen upon the confumer, with a confiderable over-charge to the profit of the shopkeeper For these reasons, the project of a tax upon flops was laid afide, and in the room of it was substituted the subsidy 1759.

WHAT in France is called the perfonal taille is, perhaps, the most important tax upon the profits of flock employed in agriculture that is levied in any part of Europe.

In the diforderly flate of Europe during the prevalence of the feudal government, the fovereign was obliged to content himfelf with taxing those who were too weak to refule to pay taxes. The great lords, though willing to affift him upon particular emergencies, refused to fubject themselves to any conftant tax, and he was not ftrong enough to force them. The occupiers of land all over Europe were, the greater part of them, originally bond-men. Through the greater part of Europe they were gradually emancipated. Some of them acquired the property of landed effates which they held by fome bafe or ignoble tenure, fometimes under the king, and fometimes under fome other great lord, like the antient copy-holders of England. Others, without acquiring the property, obtained leafes for terms of years of the lands which they occupied 463

П.

464

BOOK

pied under their lord, and thus became lefs dependent upon him. The great lords feem to have beheld the degree of profperity and independency which this inferior order of men had thus come to enjoy, with a malignant and contemptuous indignation, and willingly confented that the fovereign flould tax them. In fome countries this tax was confined to the lands which were held in property by an ignoble tenure; and, in this cafe, the taille was faid to be real. The land-tax eftablished by the late king of Sardinia, and the taille in the provinces of Languedoc, Provence, Dauphiné, and Brittany; in the generality of Montauban, and in the elections of Agen and Condom, as well as in fome other diffricts of France, are taxes upon lands held in property by an ignoble tenure. In other countries the tax was laid upon the fuppoled profits of all those who held in farm or lease lands belonging to other people, whatever might be the tenure by which the proprietor held them; and in this cafe the taille was faid to be perfonal. In the greater part of those provinces of France, which are called the Countries of Elections, the taille is of this kind. The real taille, as it is impoled only upon a part of the lands of the country, is neceffarily an unequal, but it is not always an arbitrary tax, though it is fo upon fome occafions. The perfonal taille, as it is intended to be proportioned to the profits of a certain class of people, which can only be gueffed at, is neceffarily both arbitrary and unequal.

IN France the perfonal taille at prefent, (1775,) annually imposed upon the twenty generalities, called the Countries of Elections, amounts to 40,107,239 livres, 16 fous *. The proportion in which this fum is affeffed upon those different provinces, varies from year to year, according to the reports which are made to the king's council concerning the goodness or badness of the crops, as well as other circumftances which may either increase or diminish their

* Memoires concernant les Droits, &c. tome ii. p. 17.

respective

respective abilities to pay. Each generality is divided into a cer- CHAP. tain number of elections, and the proportion in which the fum imposed upon the whole generality is divided among those different elections, varies likewife from year to year, according to the reports made to the council concerning their refpective abilities. It feems impoffible that the council, with the best intentions, can ever proportion with tolerable exactness, either of those two affeffments to the real abilities of the province or diffrict upon which they are respectively laid. Ignorance and misinformation must always, more or lefs, miflead the most upright council. The proportion which each parish ought to support of what is affested upon the whole election, and that which each individual ought to fupport of what is affeffed upon his particular parifh, are both in the fame manuer varied, from year to year, according as circumftances are fuppofed to require. These circumstances are judged of, in the one cafe, by the officers of the election; in the other by those of the parish : and both the one and the other are, more or lefs, under the direction and influence of the intendant. Not only ignorance and mifinformation, but friendship, party animolity, and private refentment, are faid frequently to millead fuch affeffors. No man fubject to fuch a tax, it is evident, can ever be certain, before he is affessed, of what he is to pay. He cannot even be certain after he is affeffed. If any perfon has been taxed who ought to have been exempted; or if any perfon has been taxed beyond his proportion, though both must pay in the mean time, yet if they complain and make good their complaints, the whole parifh is reimpofed next year in order to reimburse them. If any of the contributors become bankrupt or infolvent, the collector is obliged to advance his tax, and the whole parish is reimposed next year in order to reimburse the collector. If the collector himfelf should become bankrupt, the parish which clefts him must answer for his conduct to the receivergeneral of the election. But, as it might be troublefome for the receiver to profecute the whole parish, he takes at his choice five or VOL. II. 30 fix.

465

II.

BOOK fix of the richeft contributors, and obliges them to make good what had been loft by the infolvency of the collector. The parifh is afterwards reimpofed in order to reimburfe those five or fix. Such reimpolitions are always over and above the taille of the particular year in which they are laid on.

> WHEN a tax is imposed upon the profits of flock in a particular branch of trade, the traders are all careful to bring no more goods. to market than what they can fell at a price fufficient to reimburfe them for advancing the tax. Some of them withdraw a part of their flocks from the trade, and the market is more fparingly fupplied than before. The price of the goods rifes, and the final payment of the tax falls upon the confumer. But when a tax is imposed upon the profits of flock employed in agriculture, it is not the intereft of the farmers to withdraw any part of their flock from that employment. Each farmer occupies a certain quantity. of land, for which he pays rent. For the proper cultivation of this land a certain quantity of flock is neceffary; and by withdrawing any part of this neceffary quantity, the farmer is not likely to be more able to pay either the rent or the tax. In order to pay the tax, it can never be his interest to diminish the quantity of his produce, nor confequently to fupply the market more fparingly than before. The tax, therefore, will never enable him to raife the price of his produce, fo as to reimburfe himfelf by throwing the final payment upon the confumer. The farmer, however, must have his reasonable profit as well as every other dealer, otherwise he must give up the trade. After the imposition of a tax of this kind, he can get this reafonable profit only by paying lefs rent to the landlord. The more he is obliged to pay in the way of tax, the lefs he can afford to pay in the way of rent. A tax of this kind imposed during the currency of a leafe may, no doubt, diffrefs or ruin the farmer. Upon the renewal of the leafe it must always fall upon the landlord.

466

IN

IN the countries where the perfonal taille takes place, the farmer is commonly affelled in proportion to the flock which he appears to employ in cultivation. He is, upon this account, frequently afraid to have a good team of horfes or oxen, but endeavours to cultivate with the meanest and most wretched instruments of hufbandry that he can. Such is his diftruft in the justice of his affeffors, that he counterfeits poverty, and wifhes to appear fcarce able to pay any thing for fear of being obliged to pay too much. By this miferable policy he does not, perhaps, always confult his own intereft in the most effectual manner; and he probably loses more by the diminution of his produce than he faves by that of his tax Though, in confequence of this wretched cultivation the market is no doubt, fomewhat worfe fupplied; yet the finall rife of price which this may occasion, as it is not likely even to indemnify the farmer for the diminution of his produce, it is still lefs likely to enable him to pay more rent to the landlord. The public, the farmer, the landlord, all fuffer more or lefs by this degraded cultivation. That the perfonal taille tends, in many different ways, to difcourage cultivation, and confequently to dry up the principal fource of the wealth of every great country, I have already had occasion to observe in the third book of this inquiry.

WHAT are called poll-taxes in the fouthern provinces of North America, and in the Weft Indian illands, annual taxes of fo much a head upon every negro, are properly taxes upon the profits of a certain fpecies of flock employed in agriculture. As the planters are, the greater part of them, both farmers and landlords, the final payment of the tax falls upon them in their quality of landlords without any retribution.

TAXES of fo much a head upon the bondmen employed in cultivation, feem antiently to have been common all over Europe. There fubfifts at prefent a tax of this kind in the empire of Ruffia.

302

CHAP.

4.67

It

. BOOK It is probably upon this account that poll-taxes of all kinds have often been represented as badges of flavery. Every tax, however, hand is to the perfon who pays it a badge, not of flavery, but of liberty, It denotes that he is fubject to government, indeed, but that, as he has fome property, he cannot himfelf be the property of a mafter. A poll-tax upon flaves is altogether different from a poll-tax upon freemen. The latter is paid by the perfons upon whom it is imposed; the former by a different set of persons. The latter is either altogether arbitrary or altogether unequal, and in most cafes is both the one and the other; the former, though in fome respects unequal, different flaves being of different values, is in no respect arbitrary. Every master who knows the number of his own flaves, knows exactly what he has to pay. Those different taxes, however, being called by the fame name, have been confidered as of the fame nature.

> THE taxes which in Holland are imposed upon men and maid fervants, are taxes, not upon flock, but upon expence; and so far refemble the taxes upon confumable commodities. The tax of a guinea a head for every man fervant, which has lately been imposed in Great Britain, is of the fame kind. It falls heaviest upon the middling rank. A man of two hundred a year may keep a fingle man fervant. A man of ten thousand a year will not keep fifty. It does not affect the poor.

TAXES upon the profits of flock in particular employments can never affect the intereft of money. Nobody will lend his money for lefs intereft to thole who exercife the taxed, than to thole who exercife the untaxed employments. Taxes upon the revenue arifing from flock in all employments, where the government attempts to levy them with any degree of exactnefs, will, in many cafes, fall upon the intereft of money. The Vingtieme or twentieth-penny in France, is a tax of the fame kind with what is called the land-tax in

in England, and is affeffed, in the fame manner, upon the revenue arifing from land, houfes, and ftock. So far as it affects ftock, it is affeffed, though not with great rigour, yet with much more exactnefs than that part of the land-tax of England which is impofed upon the fame fund. It, in many cafes, falls altogether upon the intereft of money. Money is frequently funk in France upon what are called Contracts for the conftitution of a rent, that is, perpe. tual annuities redeemable at any time by the debtor upon repayment of the fum originally advanced, but of which this redemption is not exigible by the creditor except in particular cafes. The vingtieme feems not to have raifed the rate of thofe annuities, though it is exactly levied upon them all.

APPENDIX to ARTICLES I. and II.

Taxes upon the capital Value of Land, Houfes, and Stock.

WHILE property remains in the poffeffion of the fame performs whatever permanent taxes may have been imposed upon it, they have never been intended to diminish or take away any part of its capital value, but only fome part of the revenue arising from it. But when property changes hands, when it is transmitted either from the dead to the living, or from the living to the living, such taxes have frequently been imposed upon it as necessarily take away fome part of its capital value.

THE transference of all forts of property from the dead to the living, and that of immoveable property, of lands and houfes, from the living to the living, are transfactions which are in their nature either public and notorious, or fuch as cannot be long concealed. Such transfactions, therefore, may be taxed directly. The transference of flock or moveable property from the living to the living by the lending of money, is frequently a fecret transfaction, and may always be made fo. It cannot eafily, therefore, be taxed directly.

directly. It has been taxed indirectly in two different ways; firft, by requiring that the deed, containing the obligation to repay, fhould be written upon paper or parchment, which had paid a certain flamp-duty, otherwife not to be valid; fecondly, by requiring, under the like penalty of invalidity, that it fhould be recorded either in a public or fecret register, and by imposing certain duties upon fuch registration. Stamp-duties and duties of registration have frequently been imposed likewife upon the deeds transferring property of all kinds from the dead to the living, and upon those transferring immoveable property from the living to the living, transactions which might eafily have been taxed directly.

THE Vicefima Hereditatum, the twentieth penny of inheritances, imposed by Augustus upon the antient Romans, was a tax upon the transference of property from the dead to the living. Dion Cassius †, the author who writes concerning it the least indistinctly, fays, that it was imposed upon all successions, legacies and donations, in case of death, except upon those to the nearest relations, and to the poor.

OF the fame kind is the Dutch tax upon fucceffions*. Collateral fucceffions are taxed, according to the degree of relation, from five to thirty per cent. upon the whole value of the fucceffion. Teftamentary donations or legacies to collaterals, are fubject to the like duties. Those from husband to wife, or from wife to husband, to the fiftieth penny. The Luctuosa Hereditas, the mournful fucceffion of alcendents to defeendents, to the twentieth penny only. Direct fucceffions, or those of defeendents to alcendents, pay no tax. The death of a father, to fuch of his children as live in the fame house with him, is feldom attended with any increase, and frequently with a confiderable diminution of revenue; by the loss of his industry, of his office, or of fome life-rent effate, of

+ Lib. 55. See alfo Burman de Vectigalibus pop. Rom. cap. xi. and Bouchaud de l'impôt du vingtieme fur les fucceffions.

which

473

ВООК

which he may have been in poffeffion. That tax would be cruel and C H A P. oppreffive which aggravated their lofs by taking from them any part of his fucceffion. It may, however, fometimes be otherwife with those children who, in the language of the Roman law, are faid to be emancipated; in that of the Scotch law, to be foris-familiated; that is, who have received their portion, have got families of their own, and are fupported by funds feparate and independent of those of their father. Whatever part of his fucceffion might come to fuch children, would be a real addition to their fortune, and might, therefore, perhaps, without more inconveniency than what attends all duties of this kind, be liable to fome tax.

THE cafualties of the feudal law were taxes upon the tranfference of land, both from the dead to the living, and from the living to the living. In antient times they conflituted in every part of Europe one of the principal branches of the revenue of the crown.

THE heir of every immediate valial of the crown paid a certain duty, generally a year's rent, upon receiving the invefiture of the effate. If the heir was a minor, the whole rents of the effate, during the continuance of the minority, devolved to the fuperior without any other charge, befides the maintenance of the minor, and the payment of the widow's dower, when there happened to be a dowager upon the land. When the minor came to be of age, another tax, called Relief, was ftill due to the fuperior, which generally amounted likewife to a year's rent. A long minority, which in the prefent times fo frequently difburdens a great effate of all its incumbrances, and reftores the family to their antient fplendor, could in thofe times have no fuch effect. The wafte, and not the difincumbrance of the effate, was the common effect of a long minority.

By the feudal law the valial could not alienate without the confent of his fuperior, who generally extorted a fine or composition for granting it. This fine, which was at first arbitrary, $\frac{7}{7}$ came

BOOK V. Came in many countries to be regulated at a certain portion of the price of the land. In fome countries, where the greater part of the other feudal cuftoms have gone into difufe, this tax upon the alienation of land fill continues to make a very confiderable branch of the revenue of the fovereign. In the canton of Berne it is fo high as a fixth part of the price of all noble fiefs; and a tenth part of that of all ignoble ones*. In the canton of Lucerne the tax upon the fale of lands is not univerfal, and takes place only in certain diftricts. But if any perfon fells his land, in order to remove out of the territory, he pays ten per cent. upon the whole price of the fale \uparrow . Taxes of the fame kind upon the fale either of all lands, or of lands held by certain tenures, take place in many other countries, and make a more or lefs confiderable branch of the revenue of the fovereign.

> SUCH transactions may be taxed indirectly, by means either of ftamp-duties, or of duties upon registration; and those duties either may or may not be proportioned to the value of the subject which is transferred.

> IN Great Britain the flamp-duties are higher or lower, not fo much according to the value of the property transferred (an eighteen penny or half crown flamp being fufficient upon a bond for the largeft fum of money) as according to the nature of the deed. The higheft do not exceed fix pounds upon every fheet of paper, or fkin of parchment; and thefe high duties fall chiefly upon grants from the crown, and upon certain law proceedings; without any regard to the value of the fubject. There are in Great Britain no duties on the regisfration of deeds or writings, except the fees of the officers, who keep the register; and thefe are feldom more than a reafonable recompence for their labour. The crown derives no revenue from them.

* Memoires concernant les Droits, &c. tom. i. p. 154. + Id. p. 157.

IN

IN Holland * there are both ftamp-duties and duties upon regifiration; which in fome cafes are, and in fome are not proportioned to the value of the property transferred. All testaments must be written upon flampt-paper, of which the price is proportioned to the property disposed of, fo that there are flamps which cost from three-pence, or three flivers a fheet, to three hundred florins, equal to about twenty-feven pounds ten shillings of our money. If the flamp is of an inferior price to what the teffator ought to have made ufe of, his fuccession is confiscated. This is over and above all their other taxes on fucceffion. Except bills of exchange, and fome other mercantile bills, all other deeds, bonds and contracts, are fubject to a flamp-duty. This duty, however, does not rife in proportion to the value of the fubject. All fales of land and of houfes, and all mortgages upon either, must be registered, and, upon registration, pay a duty to the flate of two and a half per cent. upon the amount of the price or of the mortgage. This duty is extended to the fale of all fhips and veffels of more than two tons burthen, whether decked or undecked. Thefe, it feems, are confidered as a fort of houses upon the water. The fale of moveables, when it is ordered by a court of juffice, is fubject to the like duty of two and a half per cent.

IN France there are both ftamp duties and duties upon registration. The former are confidered as a branch of the aides or excife, and in the provinces where those duties take place, are levied by the excise officers. The latter are confidered as a branch of the domain of the crown, and are levied by a different fet of officers.

THOSE modes of taxation, by flamp-duties and by duties upon registration, are of very modern invention. In the course of little more than a century, however, flamp-duties have, in Europe, become almost universal, and duties upon registration extremely common.

* Id. tom. i. p. 223, 224, 225. Vol. II. 3 P There 473 С Н А Р.

474

There is no art which one government fooner learns of another than that of draining money from the pockets of the people.

TAXES upon the transference of property from the dead to the living, fall finally as well as immediately upon the perfon to whom the property is transferred. Taxes upon the fale of land fall altogether upon the feller. The feller is almost always under the necesfity of felling, and must, therefore, take such a price as he can get. The buyer is fearce ever under the neceffity of buying, and will, therefore, only give fuch a price as he likes. He confiders what the land will cost him in tax and price together. The more he is obliged to pay in the way of tax, the lefs he will be difpofed to give in the way of price. Such taxes, therefore, fall almost always upon a neceffitous person, and must, therefore, be frequently very cruel and oppreffive. Taxes upon the fale of new-built houfes, where the building is fold without the ground, fall generally upon the buyer, because the builder must generally have his profit; otherwise he must give up the trade. If he advances the tax, therefore, the, buyer must generally repay it to him. Taxes upon the fale of old houses, for the same reason as those upon the sale of land, fall generally upon the feller; whom in most cases either conveniency or neceffity obliges to fell. The number of new-built houfes that are annually brought to market, is more or lefs regulated by the demand. Unlefs the demand is fuch as to afford the builder his profit, after paying all expences, he will build no more houses. The number of old houfes which happen at any time to come to market is regulated by accidents of which the greater part have no relation to the demand. Two or three great bankruptcies in a mercantile town, will bring many houfes to fale, which must be fold for what can be got for them. Taxes upon the fale of groundrents fall altogether upon the feller; for the fame reafon as those upon the fale of land. Stamp duties, and dutics upon the registration

tion of bonds and contracts for borrowed money, fall altogether upon the borrower, and, in fact, are always paid by him. Duties of the fame kind upon law proceedings fall upon the fuitors. They reduce to both the capital value of the fubject in difpute. The more it cofts to acquire any property, the lefs must be the neat value of it when acquired.

ALL taxes upon the transference of property of every kind, fo far as they diminish the capital value of that property, tend to diminish the funds deflined for the maintainance of productive labour. They are all more or lefs unthrifty taxes that increase the revenue of the fovereign, which feldom maintains any but productive labourers; at the expence of the capital of the people, which maintains none but productive.

SUCH taxes, even when they are proportioned to the value of the property transferred, are still unequal; the frequency of transference not being always equal in property of equal value. When they are not proportioned to this value, which is the cafe with the greater part of the stamp-duties, and duties of registration, they are still more fo. They are in no respect arbitrary, but are or may be in all cafes perfectly clear and certain. Though they fometimes fall upon the perfon who is not very able to pay; the time of payment is in most cases fufficiently convenient for him. When the payment becomes due, he must in most cases have the money to pay. They are levied at very little expence, and in general fubject the contributors to no other inconveniency befides always the unavoidable one of paying the tax.

IN France the ftamp-duties are not much complained of. Thole of registration, which they call the Contrôle, are. They give occafion, it is pretended, to much extortion in the officers of the farmers general

3 P 2

475

CHAP.

general who collect the tax, which is in a great meafure arbitrary and uncertain. In the greater part of the libels which have been written against the prefent fystem of finances in France, the abuses of the controle make a principal article. Uncertainty, however, does not feem to be necessfarily inherent in the nature of fuch taxes. If the popular complaints are well founded, the abuse must arise, not so much from the nature of the tax, as from the want of precision and diffinctuels in the words of the edicts or laws which impose it.

THE registration of mortgages, and in general of all rights upon immoveable property, as it gives great fecurity both to creditors and purchafers, is extremely advantageous to the public. That of the greater part of deeds of other kinds is frequently inconvenient and even dangerous to individuals, without any advantage to the public. All registers which, it is acknowledged, ought to be kept feeret, ought certainly never to exist. 'I he credit of individuals ought certainly never to depend upon fo very flender a fecurity as the probity and religion of the inferior officers of revenue. But where the fees of registration have been made a fource of revenue to the fovereign, register offices have commonly been multiplied without end, both for the deeds which ought to be registered, and for those which ought not. In France there are feveral different forts of fecret registers. This abufe, though not perhaps a neceffary, it must be acknowledged, is a very natural effect of fuch taxes.

SUCH flamp-duties as those in England upon cards and dice, upon news-papers and periodical pamphlets, &c. are properly taxes upon confumption; the final payment falls upon the perfons who use or confume fuch commodities. Such flamp-duties as those upon licences to retail ale, wine and spirituous liquors, though intended, perhaps, to fall upon the profits of the retailers, are likewife

476

BOOK

likewife finally paid by the confumers of those liquors. Such taxes, C H A P. though called by the fame name, and levied by the fame officers and in the fame manner with the ftamp-duties above mentioned upon the transference of property, are however of a quite different nature, and fall upon quite different funds.

ARTICLE III.

Taxes upon the Wages of Labour ...

THE wages of the inferior classes of workmen, I have endeavoured to flow in the first book, are every where necessarily regulated by two different circumftances; the demand for labour, and the ordinary or average price of provisions. The demand for labour, according as it happens to be either increasing, flationary, or declining; or to require an increasing, flationary, or declining population, regulates the fubfiftence of the labourer, and determines in what degree it shall be, either liberal, moderate, or fcanty. The ordinary or average price of provisions determines the quantity of money which must be paid to the workman in order to enable him, one year with another, to purchase this liberal, moderate, orfcanty fublistence. While the demand for labour and the price ofprovisions, therefore, remain the fame, a direct tax upon the. wages of labour can have no other effect than to raife them fomewhat higher than the tax. Let us fuppole, for example, that in. a particular place the demand for labour and the price of provifions were fuch, as to render ten fhillings a week the ordinary wages of labour; and that a tax of one-fifth, or four fhillings in the pound, was imposed upon wages. If the demand for labour and the price of provisions remained the fame, it would still be neceffary that the labourer should in that place earn fuch a fublistence as could be bought only for ten fhillings a week, or that after. paying

воок

478

paying the tax he fhould have ten fhillings a week free wages. But in order to leave him fuch free wages after paying fuch a tax, the price of labour muft in that place foon rife, not to twelve fhillings a week only, but to twelve and fixpence; that is, in order to enable him to pay a tax of one-fifth, his wages muft neceffarily foon rife, not one-fifth part only, but one-fourth. Whatever was the proportion of the tax, the wages of labour muft in all cafes rife, not only in that proportion, but in a higher proportion. If the tax, for example, was one-tenth, the wages of labour muft neceffarily foon rife, not one-tenth part only, but one-eighth.

A DIRECT tax upon the wages of labour, therefore, though the labourer might perhaps pay it out of his hand, could not properly be faid to be even advanced by him; at least if the demand for labour and the average price of provisions remained the fame after the tax as before it. In all fuch cafes, not only the tax, but fomething more than the tax, would in reality be advanced by the perfon who immediately employed him. The final payment would in different cases fall upon different persons. The rife which fuch a tax might occasion in the wages of manufacturing labour would be advanced by the mafter manufacturer, who would both be entitled and obliged to charge it, with a profit, upon the price of his goods. The final payment of this rife of wages, therefore, together with the additional profit of the mafter manufacturer, would fall upon the confumer. The rife which fuch a tax might occafion in the wages of country labour would be advanced by the farmer, who, in order to maintain the fame number of labourers as before, would be obliged to employ a greater capital. In order to get back this greater capital, together with the ordinary profits of flock, it would be neceffary that he fhould retain a larger portion, or what comes to the fame thing, the price of a larger portion, of the produce of the land, and confequently that he

fhould

fhould pay lefs rent to the landlord. The final payment of this rife of wages, therefore, would in this cafe fall upon the landlord, together with the additional profit of the farmer who had advanced it. In all cafes, a direct tax upon the wages of labour muft, in the long run, occasion both a greater reduction in the rent of land, and a greater rife in the price of manufactured goods, than would have followed from the proper affeffment of a fum equal to the produce of the tax, partly upon the rent of land, and partly upon confumable commodities.

IF direct taxes upon the wages of labour have not always occafioned a proportionable rife in those wages, it is because they have generally occasioned a confiderable fall in the demand for labour. The declension of industry, the decrease of employment for the poor, the diminution of the annual produce of the land and labour of the country, have generally been the effects of fuch taxes. In confequence of them, however, the price of labour must always be higher than it otherwise would have been in the actual flate of the demand : and this enhancement of price, together with the profit of those who advance it, must always be finally paid by the landlords and confumers.

A TAX upon the wages of country labour does not raife the price of the rude produce of land in proportion to the tax; for the fame reafon that a tax upon the farmers profit does not raife that price in that proportion.

ABSURD and deftructive as fuch taxes are, however, they takeplace in many countries. In France that part of the taille which is charged upon the induftry of workmen and day-labourers in country villages, is properly a tax of this kind. Their wages are computed according to the common rate of the diffrict in which they refide, and that they may be as little liable as poffible to any over-charge, their yearly gains are effimated at no more than two hundred 479

CHAP.

BOOK

hundred working days in the year *. The tax of each individual is varied from year to year according to different circumftances, of which the collector or the commiffary, whom the intendant appoints to affift him, are the judges. In Bohemia, in confequence of the alteration in the fyftem of finances which was begun in 1748, a very heavy tax is imposed upon the industry of artificers. They are divided into four claffes. The higheft clafs pay a hundred florins a year; which, at two and twenty pence halfpenny a florin, amounts to 91.7 s. 6 d. The fecond clafs are taxed at feventy; the third at fifty; and the fourth, comprehending artificers in villages, and the loweft clafs of those in towns, at twenty-five florins \dagger .

THE recompence of ingenious artifts and of men of liberal profeflions, I have endeavoured to fhow in the firft book, neceffarily keeps a certain proportion to the emoluments of inferior trades. A tax upon this recompence, therefore, could have no other effect than to raife it fomewhat higher than in proportion to the tax. If it did not rife in this manner, the ingenious arts and the liberal profeffions, being no longer upon a level with other trades, would be fo much deferted that they would foon return to that level.

THE emoluments of offices are not, like those of trades and profeffions, regulated by the free competition of the market, and do not, therefore, always bear a just proportion to what the nature of the employment requires. They are, perhaps, in most countries, higher than it requires; the perfons who have the adminifiration of government being generally disposed to reward both themsfelves and their immediate dependents rather more than enough. The emoluments of offices, therefore, can in most cafes very well

* Id. tom. ii. p. 108.

3

+ Id. tom. iii. p. 87.

bear

bear to be taxed. The perfons, befides, who enjoy public offices, CHAP. especially the more lucrative, are in all countries the objects of general envy; and a tax upon their emoluments, even though it fhould be fomewhat higher than upon any other fort of revenue, is always a very popular tax. In England, for example, when by the land-tax every other fort of revenue was supposed to be affeffed at four shillings in the pound, it was very popular to lay a real tax of five shillings in the pound upon the falaries of offices which exceeded a hundred pounds a year; those of the judges and a few others lefs obnoxious to envy excepted. There are in England no other direct taxes upon the wages of labour.

ARTICLE IV.

Taxes which, it is intended, should, fall indifferently upon every different Species of Revenue.

THE taxes which, it is intended, should fall indifferently upon every different species of revenue, are capitation taxes, and taxes upon confumable commodities. These must be paid indifferently from whatever revenue the contributors may poffefs; from the rent of their land, from the profits of their flock, or from the wages of their labour.

Capitation Taxes.

CAPITATION taxes, if it is attempted to proportion them to the fortune or revenue of each contributor, become altogether arbitrary. The flate of a man's fortune varies from day to day, and without an inquifition more intolerable than any tax, and renewed at leaft once every year, can only be gueffed at. His affeliment, therefore, must in most cases depend upon the good or bad humour of his affeffors, and must, therefore, be altogether arbitrary and uncertain.

Vol. II.

3 Q

CAPITATION

П.

воок V.

CAPITATION taxes, if they are proportioned, not to the fupposed fortune, but to the rank of each contributor, become altogether unequal; the degrees of fortune being frequently unequal in the fame degree of rank.

SUCH taxes, therefore, if it is attempted to render them equal, become altogether arbitrary and uncertain; and if it is attempted to render them certain and not arbitrary, become altogether unequal. Let the tax be light or heavy, uncertainty is always a great grievance. In a light tax a confiderable degree of inequality may be fupported; in a heavy one it is altogether intolerable.

In the different poll-taxes which took place in England, during the reign of William III. the contributors were, the greater part of them, affeffed according to the degree of their rank; as dukes, marquisses, earls, viscounts, barons, esquires, gentlemen, the eldeft and youngeft fons of peers, &c. All shopkeepers and tradefmen worth more than three hundred pounds, that is, the better fort of them, were fubject to the fame affeliment; how great foever might be the difference in their fortunes. Their rank was more confidered than their fortune. Several of those who in the first poll-tax were rated according to their supposed fortune, were afterwards rated according to their rank. Serjeants, attornies, and proctors at law, who in the first poll-tax were affessed at three shillings in the pound of their supposed income, were afterwards affessed as gentlemen. In the affessiment of a tax, which was not very heavy, a confiderable degree of inequality had been found lefs infupportable than any degree of uncertainty.

IN the capitation which has been levied in France without any , interruption fince the beginning of the prefent century, the higheft orders of people are rated according to their rank by an invariable tariff;

tariff; the lower orders of people, according to what is fuppofed CHAP. to be their fortune, by an affeffment which varies from year to year. The officers of the king's court, the judges and other officers in the fuperior courts of juffice, the officers of the troops, &c. are affeffed in the firft manner. The inferior ranks of people in the provinces are affeffed in the fecond. In France the great eafily fubmit to a confiderable degree of inequality in a tax which, fo far as it affects them, is not a very heavy one; but could not brook the arbitrary affeffment of an intendant. The inferior ranks of people muft, in that country, fuffer patiently the ufage which their fuperiors think proper to give them.

IN England the different poll-taxes never produced the fum which had been expected from them, or which, it was fuppofed, they might have produced, had they been exactly levied. In France the capitation always produces the fum expected from it. The mild government of England, when it affeffed the different ranks of people to the poll-tax, contented itself with what that affeffment happened to produce; and required no compensation for the lofs which the flate might fuffain either by those who could not pay, or by those who would not pay (for there were many fuch), and who, by the indulgent execution of the law, were not forced to pay. The more fevere government of France affeffes upon each generality a certain fum, which the intendant must find as he can. If any province complains of being affeffed too high, it may, in the affeffment of next year, obtain an abatement proportioned to the over-charge of the year before: But it must pay in the meantime. The intendant, in order to be fure of finding the fum affeffed upon his generality, was impowered to affefs it in a larger fum, that the failure or inability of fome of the contributors might be compensated by the over-charge of the reft; and till 1765, the fixation of this furplus affefiment, was left altogether

3Q2

to

BOOK V. by the perfectly well informed author of the Memoirs upon the impositions in France, the proportion which falls upon the nobility, and upon those whose privileges exempt them from the taille, is the least confiderable. The largest falls upon those super the taille, who are affested to the capitation at so much a pound of what they pay to that other tax.

> CAPITATION taxes, fo far as they are levied upon the lower, ranks of people, are direct taxes upon the wages of labour, and are attended with all the inconveniencies of fuch taxes.

CAPITATION taxes are levied at little expence; and, where they are rigoroully exacted, afford a very fure revenue to the flate. It is upon this account that in countries where the eafe, comfort, and fecurity of the inferior ranks of people are little attended to, capitation taxes are very common. It is in general, however, but a fmall part of the public revenue, which, in a great empire, has ever been drawn from fuch taxes; and the greateft fum which they have ever afforded, might always have been found in fome other way much more convenient to the people.

Taxes upon confumable Commodities.

THE impoffibility of taxing the people, in proportion to their revenue, by any capitation, feems to have given occasion to the invention of taxes upon confumable commodities. The state not knowing how to tax, directly and proportionably, the revenue of its subjects, endeavours to tax it indirectly by taxing their expense, which, it is supposed, will in most cases be nearly in proportion to their revenue.

revenue. Their expence is taxed by taxing the confumable commo- C H A P. dities upon which it is laid out.

CONSUMABLE commodities are either neceffaries or luxuries.

By neceffaries I understand, not only the commodities which are indifpenfably neceffary for the fupport of life, but whatever the cuftom of the country renders it indecent for creditable people. even of the loweft order, to be without. A linen fhirt, for example, is, strictly speaking, not a necessary of life. The Greeke and Romans lived, I fuppofe, very comfortably, though they had no linen. But in the prefent times, through the greater part of Europe, a creditable day-labourer would be ashamed to appear in public without a linen fhirt, the want of which would be fuppofed to denote that difgraceful degree of poverty, which, it is prefumed, no body can well fall into without extreme bad conduct. Cuftom, in the fame manner, has rendered leather fhoes a neceffary of life in England. The poorest creditable perfon of either fex would be ashamed to appear in public without them. In Scotland, custom has rendered them a neceffary of life to the loweft order of men: but not to the fame order of women, who may, without any diferedit, walk about bare footed. In France, they are neceffaries neither to men nor to women; the loweft rank of both fexes appearing there publicly, without any difcredit, fometimes in wooden shoes, and sometimes bare-footed. Under necessaries therefore, I comprehend, not only those things which nature, but those things which the established rules of decency have rendered neceffary to the loweft rank of people. All other things, I call luxuries; without meaning by this appellation, to throw the smallest degree of reproach upon the temperate use of them. Beer and ale, for example, in Great Britain, and wine, even in the wine countries, I call luxuries. A man of any rank may, without any

BOOK

486

any reproach, abitain totally from tafting fuch liquors. Nature does not render them neceflary for the fupport of life; and cuftom no where renders it indecent to live without them.

As the wages of labour are every where regulated, partly by the demand for it, and partly by the average price of the neceflary articles of fubfiftence; whatever raifes this average price muft neceflarily raife those wages, fo that the labourer may ftill be able to purchafe that quantity of those neceflary articles which the flate of the demand for labour, whether increasing, flationary, or declining, requires that he should have \dagger . A tax upon those articles neceffarily raifes their price fomewhat higher than the amount of the tax, becaufe the dealer, who advances the tax, must generally get it back with a profit. Such a tax must, therefore, occasion a rife in the wages of labour proportionable to this rife of price.

It is thus that a tax upon the neceffaries of life, operates exactly in the fame manner as a direct tax upon the wages of labour. The labourer, though he may pay it out of his hand, cannot, for any confiderable time at leaft, be properly faid even to advance it. It must always in the long-run be advanced to him by his immediate employer in the advanced rate of his wages. His employer, if he is a manufacturer, will charge upon the price of his goods this rife of wages, together with a profit; fo that the final payment of the tax, together with this over-charge, will fall upon the confumer. If his employer is a farmer, the final payment, together with a like over-charge, will fall upon the rent of the landlord.

It is otherwife with taxes upon what I call luxuries; even upon those of the poor. The rife in the price of the taxed commodities,

+ See Book I. Chap. 8.

will

will not neceffarily occasion any rife in the wages of labour. A tax upon tobacco, for example, though a luxury of the poor as well as of the rich, will not raife wages. Though it is taxed in England at three times, and in France at fifteen times its original price, those high duties feem to have no effect upon the wages of labour. The fame thing may be faid of the taxes upon tea and fugar; which in England and Holland have become luxuries of the loweft ranks of people; and of those upon chocolate, which in Spain is faid to have become fo. The different taxes which in Great Britain have in the courfe of the prefent century been impofed upon fpirituous liquors, are not supposed to have had any effect upon the wages of labour. The rife in the price of porter, occafioned by an additional tax of three shillings upon the barrel of strong beer, has not raifed the wages of common labour in London. These were about eighteenpence and twenty-pence a day before the tax, and they are not more now.

THE high price of fuch commodities does not neceffarily diminifh the ability of the inferior ranks of people to bring up families. Upon the fober and induftrious poor, taxes upon fuch commodities act as fumptuary laws, and difpofe them either to moderate, or to refrain altogether from the ufe of fuperfluities which they can no longer eafily afford. Their ability to bring up families, in confequence of this forced frugality, inflead of being diminifhed, is frequently, perhaps, increafed by the tax. It is the fober and induftrious poor who generally bring up the moft numerous families, and who principally fupply the demand for ufeful labour. All the poor indeed are not fober and induftrious, and the diffolute and diforderly might continue to indulge themfelves in the ufe of fuch commodities after this rife of price in the fame manner as before; without regarding the diffrefs which this indulgence might bring upon their families. Such diforderly per-

9

487

CHAP.

H...

fons,

fous, however, feldom rear up numerous families; their children generally perifhing from neglect, mifmanagement, and the fcantinefs or unwholefomenefs of their food. If by the firength of their conflitution they furvive the hardfhips to which the bad conduct of their parents expofes them; yet the example of that bad conduct commonly corrupts their morals; fo that, inflead of being ufeful to fociety by their induftry, they become public nuifances by their vices and diforders. Though the advanced price of the luxuries of the poor, therefore, might increafe fomewhat the diffrefs of fuch diforderly families, and thereby diminifh fomewhat their ability to bring up children; it would not probably diminifh much the ufeful population of the country.

ANY rife in the average price of neceffaries, unlefs it is compenfated by a proportionable rife in the wages of labour, muft neceffarily diminifh more or lefs the ability of the poor to bring up numerous families, and confequently to fupply the demand for ufeful labour; whatever may be the flate of that demand, whether increafing, flationary, or declining; or fuch as requires an increafing, flationary, or declining population.

TAXES upon luxurics have no tendency to raife the price of any other commodities except that of the commodities taxed. Taxes upon neceffaries, by raifing the wages of labour, neceffarily tend to raife the price of all manufactures, and confequently to diminifh the extent of their fale and confumption. Taxes upon luxuries are finally paid by the confumers of the commodities taxed, without any retribution. They fall indifferently upon every fpecies of revenue, the wages of labour, the profits of flock, and the rent of land. Taxes upon neceffaries, fo far as they affect the labouring poor, are finally paid, partly by landlords in the diminifhed rent of their lands, and partly by rich confumers, whether landlords

488

воок

L-----

landlords or others, in the advanced price of manufactured goods; and always with a confiderable over-charge. The advanced price of fuch manufactures as are real necessaries of life, and are deftined for the confumption of the poor, of coarfe woollens, for example, must be compensated to the poor by a farther advancement of their wages. The middling and fuperior ranks of people, if they underflood their own interest, ought always to oppose all taxes upon the neceffaries of life, as well as all direct taxes upon the wages of labour. The final payment of both the one and the other falls altogether upon themfelves, and always with a confiderable over-They fall heaviest upon the landlords, who always pay in charge. a double capacity; in that of landlords, by the reduction of their rent; and in that of rich confumers, by the increase of their expence. The observation of Sir Matthew Decker, that certain taxes are, in the price of certain goods, fometimes repeated and accumulated four or five times, is perfectly just with regard to taxes upon the neceffaries of life. In the price of leather, for example, you must pay, not only for the tax upon the leather of your own shoes, but for a part of that upon those of the shoe-maker and the tanner. You must pay too for the tax upon the falt, upon the foap, and upon the candles which those workmen confume while employed in your fervice, and for the tax upon the leather, which the falt-maker, the foap-maker, and the candlemaker confume while employed in their fervice.

IN Great Britain, the principal taxes upon the neceffaries of life are those upon the four commodities just now mentioned, falt, leather, foap, and candles.

SALT is a very antient and a very universal fubject of taxation. It was taxed among the Romans, and it is fo at prefent in, I believe, every part of Europe. The quantity annually confumed by Vol. II. 3 R any CHAP.

BOOK

any individual is fo fmall, and may be purchased fo gradually, that nobody, it feems to have been thought, could feel very fenfibly even a pretty heavy tax upon it. It is in England taxed at three shillings and fourpence a bushel; about three times the original price of the commodity. In fome other countries the tax is still higher. Leather is a real neceffary of life. The use of linen renders soap fuch. In countries where the winter nights are long, candles are a neceffary instrument of trade. Leather and soap are in Great Britain taxed at three halfpence a pound; candles at a penny; taxes which, upon the original price of leather may amount to about eight or ten per cent; upon that of foap to about twenty or five and twenty per cent; and upon that of candles to about fourteen or fifteen per cent; taxes which, though lighter than that upon falt, are still very heavy. As all those four commodities are real necessaries of life, fuch heavy taxes upon them must increase fomewhat the expence of the sober and industrious poor, and must confequently raife more or lefs the wages of their labour.

IN a country where the winters are fo cold as in Great Britain, fuel is, during that feafon, in the ftricteft fenfe of the word, a neceffary of life, not only for the purpofe of dreffing victuals, but for the comfortable fubfiftence of many different forts of workmen who work within doors; and coals are the cheapeft of all fuel. The price of fuel has fo important an influence upon that of labour, that all over Great Britain manufactures have confined themfelves principally to the coal countries; other parts of the country, on account of the high price of this neceffary article, not being able to work fo cheap. In fome manufactures, befides, coal is a neceffary influment of trade; as in thofe of glafs, iron, and all other metals. If a bounty could in any cafe be reafonable, it might perhaps be fo upon the tranfportation of coals from thofe parts of the country in which they abound, to thofe in which they are wanted. But

But the legiflature, inflead of a bounty, has imposed a tax of three fhillings and three-pence a ton upon coal carried coaftways; which upon most forts of coal is more than fixty per cent. of the original price at the coal-pit. Coals carried either by land or by inland navigation pay no duty. Where they are naturally cheap, they are confumed duty free : Where they are naturally dear, they are loaded with a heavy duty.

SUCH taxes, though they raife the price of fublistence, and confequently the wages of labour, yet they afford a confiderable revenue to government, which it might not be eafy to find in any other way. There may, therefore, be good reasons for continuing them. The bounty upon the exportation of corn, fo far as it tends in the actual flate of tillage to raife the price of that neceffary article, produces all the like bad effects; and inflead of affording any revenue, frequently occasions a very great expence to government. The high duties upon the importation of foreign corn, which in years of moderate plenty amount to'a prohibition; and the abfolute prohibition of the importation either of live cattle or of falt provisions, which takes place in the ordinary flate of the law, and which, on account of the fcarcity, is at prefent fulpended for a limited time with regard to Ireland and the British plantations, have all the bad effects of taxes upon the necessaries of life, and produce no revenue to government. Nothing feems neceffary for the repeal of fuch regulations, but to convince the public of the futility of that fystem in confequence of which they have been eftablished.

TAXES upon the necessaries of life are much higher in many other countries than in Great Britain. Duties upon flour and meal when ground at the mill, and upon bread when baked at the oven, take place in many countries. In Holland the money price of the bread confumed in towns is fuppofed to be doubled by means of fuch

3 R 2

491

CHAP.

BOOK

fuch taxes. In lieu of a part of them, the people who live in the country pay every year fo much a head, according to the fort of Langund bread they are fuppoied to confume. Those who confume wheaten bread, pay three gilders fifteen flivers; about fix fhillings and ninepence halfpenny. Thefe, and fome other taxes of the fame kind, by raifing the price of labour, are faid to have ruined the greater part of the manufactures of Holland *. Similar taxes, though not quite fo heavy, take place in the Milanese, in the states of Genoa, in the dutchy of Modena, in the dutchies of Parma, Placentia, and Guastalla, and in the ecclesiastical state. A French authort of some note has proposed to reform the finances of his country, by fubflituting in the room of the greater part of other taxes, this most ruinous of all taxes. There is nothing fo abfurd, fays Cicero, which has not fometimes been afferted by fome philosophers.

> TAXES upon butchers meat are still more common than those upon bread. It may indeed be doubted whether butchers meat is any where a neceffary of life. Grain and other vegetables, with the help of milk, cheefe, and butter, or oil, where butter is not to be had, it is known from experience, can, without any butchers meat, afford the most plentiful, the most wholesome, the most nourishing, and the most invigorating dict. Decency no where requires that any man should eat butchers meat, as it in most places requires that he should wear a linen shirt or a pair of leather shoes.

> CONSUMABLE commodities, whether necessaries or luxuries, may be taxed in two different ways. The confumer may either pay an annual fum on account of his using or confuming goods of a certain kind; or the goods may be taxed while they remain in the hands of the dealer, and before they are delivered to the confumer. The confumable goods which last a confiderable time before they are confumed altogether, are most properly taxed in the one way.

* Memoires concernant les Droits, &c. p. 210, 211. + Le reformateur.

Thofe

Those of which the confumption is either immediate or more speedy, C in the other. The coach-tax and plate-tax are examples of the former method of imposing: The greater part of the other duties of excise and customs, of the latter.

A COACH may, with good management, last ten or twelve years. It might be taxed, once for all, before it comes out of the hands of the coach-maker. But it is certainly more convenient for the buyer to pay four pounds a year for the privilege of keeping a coach, than to pay all at once forty or forty-eight pounds additional price to the coach-maker; or a fum equivalent to what the tax is likely to coft him during the time he uses the fame coach. A fervice of plate, in the fame manner, may laft more than a century. It is certainly eafier for the confumer to pay five shillings a year for every hundred ounces of plate, near one per cent. of the value, than to redeem this long annuity at five and twenty or thirty years purchafe, which would enhance the price at least five and twenty or thirty per cent. The different taxes which affect houfes are certainly more conveniently paid by moderate annual payments, than by a heavy tax of equal value upon the first building or fale of the house.

IT was the well known propofal of Sir Mathew Decker that all commodities, even those of which the confumption is either immediate or very speedy, should be taxed in this manner; the dealer advancing nothing, but the confumer paying a certain annual sum for the licence to confume certain goods. The object of his scheme was to promote all the different branches of foreign trade, particularly the carrying trade, by taking away all duties upon importation and exportation, and thereby enabling the merchant to employ his whole capital and credit in the purchase of goods and the freight of ships, no part of either being diverted towards the advancing

CHAP.

494

BOOK advancing of taxes. The project, however, of taxing, in this manner, goods of immediate or fpeedy confumption, feems liable to the four following very important objections. First, the tax would be more unequal, or not fo well proportioned to the expence and confumption of the different contributors, as in the way in which it is commonly impofed. The taxes upon ale, wine, and fpirituous liquors, which are advanced by the dealers, are finally paid by the different confumers exactly in proportion to their respective confumption. But if the tax was to be paid by purchafing a licence to drink those liquors, the fober would, in proportion to his confumption, be taxed much more heavily than the drunken confumer. A family which exercised great hospitality would be taxed much more lightly than one who entertained fewer gueffs. Secondly, this mode of taxation, by paying for an annual, half-yearly, or quarterly licence to confume certain goods, would diminifh very much one of the principal conveniences of taxes upon goods of fpeedy confumption; the piece-meal payment. In the price of three-pence halfpenny, which is at prefent paid for a pot of porter, the different taxes upon malt, hops, and beer, together with the extraordinary profit which the brewer charges for having advanced them, may perhaps amount to about three halfpence. If a workman can conveniently spare those three halfpence, he buys a pot of porter. If he cannot, he contents himfelf with a pint, and, as a penny faved is a penny got, he thus gains a farthing by his temperance. He pays the tax piece-meal, as he can afford to pay it, and when he can afford to pay it; and every act of payment is perfectly voluntary, and what he can avoid if he chufes to do fo. Thirdly, fuch taxes would operate less as fumptuary laws. When the licence was once purchased, whether the purchaser drunk much or drunk little, his tax would be the fame. Fourthly, if a workman was to pay all at once, by yearly, half-yearly, or quarterly payments, a tax equal to what he at prefent pays, with little or no inconveniency, upon all the diffe-

9

rent

rent pots and pints of porter which he drinks in any fuch period of CHAP. time, the fum might frequently diffrefs him very much. This mode of taxation, therefore, it feems evident, could never, without the most grievous oppression, produce a revenue nearly equal to what is derived from the prefent mode without any oppreffion. In feveral countries, however, commodities of an immediate or very fpeedy confumption are taxed in this manner. In Holland, people pay fo much a head for a licence to drink tea. I have already mentioned a tax upon bread, which, fo far as it is confumed in farm-houfes and country villages, is there levied in the fame manner.

THE duties of excife are imposed chiefly upon goods of home produce defined for home confumption. They are imposed only upon a few forts of goods of the most general use. There can never be any doubt either concerning the goods which are fubject to those duties, or concerning the particular duty which each fpecies of goods is fubject to. They fall almost altogether upon what I call luxuries, excepting always the four duties above-mentioned, upon falt, foap, leather, candles, and, perhaps, that upon green glass.

THE duties of customs are much more antient than those of excife. They feem to have been called cuftoms, as denoting cuftomary payments which had been in use from time immemorial. They appear to have been originally confidered as taxes upon the profits of merchants. During the barbarous times of feudal anarchy, merchants, like all the other inhabitants of burghs, were confidered as little better than emancipated bondmen, whofe perfons were despifed, and whose gains were envied. The great nobility, who had confented that the king fhould tallage the profits of their own tenants, were not unwilling that he fhould tallage likewife those of an order of men whom it was much less their interest to protect.

II.

protect. In those ignorant times, it was not understood, that the profits of merchants are a fubject not taxable directly; or that the final payment of all fuch taxes must fall, with a confiderable overcharge, upon the confumers.

THE gains of alien merchants were looked upon more unfavourably than those of English merchants. It was natural, therefore, that those of the former should be taxed more heavily than those of the latter. This diffinction between the duties upon aliens and those upon English merchants, which was begun from ignorance, has been continued from the spirit of monopoly, or in order to give our own merchants an advantage both in the home and in the foreign market.

WITH this diffinction, the ancient duties of cuftoms were impofed equally upon all forts of goods, neceffaries as well as luxuries, goods exported as well as goods imported. Why fhould the dealers in one fort of goods, it feems to have been thought, be more favoured than those in another? or why fhould the merchant exporter be more favoured than the merchant importer?

THE antient cuftoms were divided into three branches. The first, and perhaps the most antient of all those duties, was that upon wool and leather. It feems to have been chiefly or altogether an exportation duty. When the woollen manufacture came to be established in England, less the king should lose any part of his cuftoms upon wool by the exportation of woollen cloths, a like duty was imposed upon them. The other two branches were, first, a duty upon wine, which being imposed at fo much a ton, was called a tonnage; and, fecondly, a duty upon all other goods, which, being imposed at fo much a pound of their supposed value, was called a poundage. In the forty-feventh year of Edward III. a duty

496

BOOK

a duty of fixpence in the pound was imposed upon all goods CHAP. exported and imported, except wools, wool-fells, leather, and wines, which were subject to particular duties. In the fourteenth of Richard II. this duty was raifed to one fhilling in the pound; but three years afterwards, it was again reduced to fix-pence. It was raifed to eight-pence in the fecond year of Henry IV.; and in the fourth year of the fame prince, to one shilling. From this time to the ninth year of William III. this duty continued at one shilling in the pound. The duties of tonnage and poundage were generally granted to the king by one and the fame act of parliament, and were called the Subfidy of Tonnage and Poundage. The fubfidy of poundage having continued for fo long a time at one shilling in the pound, or at five per cent.; a fubfidy came, in the language of the cuftoms, to denote a general duty of this kind of five per cent. This fubfidy, which is now called the Old Subfidy, ftill continues to be levied according to the book of rates established in the twelfth of Charles II. The method of afcertaining, by a book of rates, the value of goods fubject to this duty, is faid to be older than the time of James I. The new fubfidy imposed by the ninth and tenth of William III., was an additional five per cent. upon the greater part of goods. The one-third and the two-third fubfidy made up between them another five per cent. of which they were poportionable parts. The fublidy of 1747 made a fourth five per cent. upon the greater part of goods; and that of 1759, a fifth upon fome particular forts of goods. Befides those five fublidies, a great variety of other duties have occasionally been imposed upon particular forts of goods, in order fometimes to relieve the exigencies of the flate, and fometimes to regulate the trade of the country, according to the principles of the mercantile fystem.

THAT fystem has come gradually more and more into fashion. The old fublidy was imposed indifferently upon exportation as well VOL. II. 3 S as

as importation. The four subsequent subsidies, as well as the other duties which have fince been occafionally imposed upon particular forts of goods, have, with a few exceptions, been laid altogether upon importation. The greater part of the ancient duties which had been imposed upon the exportation of the goods of home produce and manufacture, have either been lightened or taken away altogether. In most cases they have been taken away. Bounties have even been given upon the exportation of fome of them. Drawbacks too, fometimes of the whole, and, in most cases, of a part of the duties which are paid upon the importation of foreign goods. have been granted upon their exportation. Only half the duties imposed by the old fubfidy upon importation are drawn back upon exportation : but the whole of those imposed by the latter subfidies and other imposts are, upon the greater part of goods, drawn back in the fame manner. This growing favour of exportation, and discouragement of importation, have fuffered only a few exceptions, which chiefly concern the materials of fome manufactures. Thefe, our merchants and manufacturers are willing should come as cheap as poffible to themfelves, and as dear as poffible to their rivals and competitors in other countries. Foreign materials are, upon this account, fometimes allowed to be imported duty free; Spanish wool, for example, flax, and raw linen yarn. The exportation of the materials of home produce, and of those which are the peculiar produce of our colonies, has fometimes been prohibited, and fometimes fubjected to higher duties. The exportation of English wool has been prohibited. That of beaver skins, of beaver wool, and of gum Senega, has been fubjected to higher duties; Great Britain, by the conqueft of Canada and Senegal, having got almost the monopoly of those commodities.

THAT the mercantile fystem has not been very favourable to the revenue of the great body of the people, to the annual produce

498

BOOK

duce of the land and labour of the country, I have endeavoured to fhew in the fourth book of this inquiry. It feems not to have been more favourable to the revenue of the fovereign; fo far at least as that revenue depends upon the duties of cuftoms.

IN confequence of that fyftem, the importation of feveral forts of goods has been prohibited altogether. This prohibition has in fome cafes entirely prevented, and in others has very much diminifhed the importation of those commodities, by reducing the importers to the neceffity of fmuggling. It has entirely prevented the importation of foreign woollens; and it has very much diminished that of foreign filks and velvets. In both cases it has entirely annihilated the revenue of cuftoms which might have been levied upon fuch importation.

THE high duties which have been imposed upon the importation of many different forts of foreign goods, in order to discourage their confumption in Great Britain, have in many cafes ferved only to encourage fmuggling; and in all cafes have reduced the revenue of the cuftoms below what more moderate duties would have afforded. The faying of Dr. Swift, that in the arithmetic of the cuftoms two and two, inftead of making four, make fometimes only one, hold perfectly true with regard to fuch heavy duties, which never could have been imposed, had not the mercantile fystem taught us, in many cafes, to employ taxation as an inftrument, not of revenue, but of monopoly.

THE bounties which are fometimes given upon the exportation of home produce and manufactures, and the drawbacks which are paid upon the re-exportation of the greater part of foreign goods, have given occasion to many frauds, and to a fpecies of fmuggling more deftructive of the public revenue than any

3 S 2

CHAP.

500

BOOK any other. In order to obtain the bounty or drawback, the goods, it is well known, are fometimes shipped and fent to fea; but foon afterwards clandeslinely re-landed in some other part of the country. The defalcation of the revenue of cuftoms occafioned by bounties and drawbacks, of which a great part are obtained fraudulently, is very great. The gross produce of the cuftoms in the year which ended on the 5th of January, 1755, amounted to 5,06°,0001. The bounties which were paid out of this revenue, though in that year there was no bounty upon corn, amounted to 167,8001. The drawbacks which were paid upon debentures and certificates to 2,156,8001. Bounties and drawbacks together amounted to 2,324,6001. In confequence of these deductions the revenue of the customs amounted only to 2,743,4001.: from which deducting 287,9001. for the expence of management in falaries and other incidents, the neat revenue of the cuftoms for that year comes out to be 2,455,5001. The expence of management amounts, in this manner to between five and fix per cent. upon the großs revenue of the cuftoms, and to fomething more than ten per cent. upon what remains of that revenue, after deducting what is paid away in bounties and drawbacks.

> HEAVY duties being imposed upon almost all goods imported, our merchant importers fmuggle as much, and make entry of as little as they can. Our merchant exporters, on the contrary, make entry of more than they export; fometimes out of vanity, and to pass for great dealers in goods which pay no duty; and fometimes to gain a bounty or a drawback. Our exports, in confequence of these different frauds, appear upon the customhouse books greatly to overbalance our imports; to the unspeakable comfort of those politicians who measure the national prosperity by what they call the balance of trade.

> > ALL

ALL goods imported, unlefs particularly exempted, and fuch exemptions are not very numerous, are liable to fome duties of cuftoms. If any goods are imported not mentioned in the book of rates, they are taxed at 4s. 9d. $\frac{9}{20}$ for every twenty fhillings value, according to the oath of the importer, that is, nearly at five fubfidies, or five poundage duties. The book of rates is extremely comprehenfive, and enumerates a great variety of articles, many of them little ufed, and therefore not well known. It is upon this account frequently uncertain under what article a particular fort of goods ought to be claffed, and confequently what duty they ought to pay. Miftakes with regard to this fometimes ruin the cuftom-houfe officer, and frequently occafion much trouble, expence and vexation to the importer. In point of perfpicuity, precifion, and diffinctnefs, therefore, the duties of cuftoms are much inferior to thofe of excife.

In order that the greater part of the members of any fociety fhould contribute to the public revenue in proportion to their refpective expence, it does not feem neceffary that every fingle article of that expence fhould be taxed. The revenue, which is levied by the duties of excife, is fuppofed to fall as equally upon the contributors, as that which is levied by the duties of cuftoms; and the duties of excife are impofed upon a few articles only of the moft general use and confumption. It has been the opinion of many people that, by proper management, the duties of cuftoms might likewife, without any lofs to the public revenue, and with great advantage to foreign trade, be confined to a few articles only.

THE foreign articles, of the most general use and confumption in Great Britain, seem at present to confist chiefly in foreign wines and brandies; in some of the productions of America and the West Indies, sugar, rum, tobacco, cacao-nuts, &c. and in fome

502

BOOK V. of all kinds, feveral forts of piece goods, &c. Thefe different aricles afford, perhaps, at prefent the greater part of the revenue which is drawn from the duties of cuftoms. The taxes which at prefent fubfift upon foreign manufactures, if you except those upon the few contained in the foregoing enumeration, have the greater part of them been imposed for the purpose, not of revenue, but of monopoly, or to give our own merchants an advantage in the home market. By removing all prohibitions, and by fubjecting all foreign manufactures to fuch moderate taxes, as it was found from experience afforded upon each article the greateft revenue to the public, our own workmen might fill have a confiderable advantage in the home market, and many articles, fome of which at prefent afford no revenue to government, and others a very inconfiderable one, might afford a very great one.

HIGH taxes, fometimes by diminishing the confumption of the taxed commodities, and fometimes by encouraging fmuggling, frequently afford a fmaller revenue to government than what might be drawn from more moderate taxes.

WHEN the diminution of revenue is the effect of the diminution of confumption, there can be but one remedy, and that is the lowering of the tax.

WHEN the diminution of the revenue is the effect of the encouragement given to fmuggling, it may perhaps be remedied in two ways; either by diminifhing the temptation to fmuggle, or by increafing the difficulty of fmuggling. The temptation to fmuggle can be diminifhed only by the lowering of the tax; and the difficulty of fmuggling can be increafed only by eftablishing that fystem of administration which is most proper for preventing it.

THE

THE excife laws, it appears, I believe, from experience, obftruct C and embarrals the operations of the fmuggler much more effectually than those of the cuftoms. By introducing into the cuftoms a fystem of administration as fimilar to that of the excife as the nature of the different duties will admit, the difficulty of fmuggling might be very much increased. This alteration, it has been fupposed by many people, might very eafily be brought about.

THE importer of commodities liable to any duties of cuftoms. it has been faid, might at his option be allowed either to carry them to his own private warehouse, or to lodge them in a warehouse provided either at his own expence or at that of the public, but under the key of the cuftomhouse officer, and never to be opened but in his prefence. If the merchant carried them to his own private warehouse, the duties to be immediately paid, and never afterwards to be drawn back; and that warehouse to be at all times subject to the visit and examination of the customhouse officer, in order to afcertain how far the quantity contained in it corresponded with that for which the duty had been paid. If he carried them to the public warehoufe, no duty to be paid till they were taken out for home confumption. If taken out for exportation, to be duty-free; proper fecurity being always given that they should be fo exported. The dealers in those particular commodities, either by wholefale or retail, to be at all times fubject to the vifit and examination of the cuftomhouse officer; and to be obliged to justify by proper certificates the payment of the duty upon the whole quantity contained in their shops or warehoufes. What are called the excife duties upon rum imported are at prefent levied in this manner, and the fame fystem of administration might perhaps be extended to all duties upon goods imported; provided always, that those duties were, like the dutics of excife, confined to a few forts of goods of the most general

CHAP.

general use and confumption. If they were extended to almost all forts of goods, as at prefent, public warehouses of fufficient extent could not easily be provided, and goods of a very delicate nature, or of which the prefervation required much care and attention, could not fafely be trufted by the merchant in any warehouse but his own.

IF by fuch a fystem of administration fmuggling, to any confiderable extent, could be prevented even under pretty high duties; and if every duty was occafionally either heightened or lowered according as it was most likely, either the one way or the other, to afford the greatest revenue to the state; taxation being always employed as an inftrument of revenue and never of monopoly; it feems not improbable that a revenue, at least equal to the prefent neat revenue of the cuftoms, might be drawn from duties upon the importation of only a few forts of goods of the most general ufe and confumption; and that the duties of cuftoms might thus be brought to the fame degree of fimplicity, certainty, and precifion, as those of excile. What the revenue at present loses, by drawbacks upon the re-exportation of foreign goods which are afterwards relanded and confumed at home, would under this fyftem be faved altogether. If to this faving, which would alone be very confiderable, was added the abolition of all bounties upon the exportation of home-produce; in all cafes in which those bounties were not in reality drawbacks of fome duties of excife which had before been advanced; it cannot well be doubted but that the neat revenue of customs might, after an alteration of this kind, be fully equal to what it had ever been before.

IF by fuch a change of fystem the public revenue fuffered no lofs; the trade and manufactures of the country would certainly gain a very confiderable advantage. The trade in the commodities

. 9

BOOK

504

not

not taxed, by far the greatest number, would be perfectly free, and might be carried on to and from all parts of the world with every poffible advantage. Among those commodities would be comprehended all the neceffaries of life, and all the materials of manufacture. So far as the free importation of the necessaries of life reduced their average money price in the home-market, it would reduce the moncy price of labour, but without reducing in any refpect its real recompence. The value of money is in proportion to the quantity of the necessaries of life which it will purchafe. That of the neceffaries of life is altogether independant of the quantity of money which can be had for them. The reduction in the money price of labour would necefiarily be attended with a proportionable one in that of all home-manufactures, which would thereby gain fome advantage in all foreign markets. The price of fome manufactures would be reduced in a still greater proportion by the free importation of the raw materials. If raw filk could be imported from China and Indoftan duty-free, the filk manufacturers in England could greatly underfell those of both France and Italy. There would be no occasion to prohibit the importation of foreign filks and velvets. The cheapnefs of their goods would fecure to our own workmen, not only the poffeffion of the home, but a very great command of the foreign market. Even the trade in the commodities taxed would be carried on with much more advantage than at prefent. If those commodities were delivered out of the public warehouse for foreign exportation, being in this cafe exempted from all taxes, the trade in them would be perfectly free. The carrying trade in all forts of goods would under this fystem enjoy every possible advantage. If those commodities were delivered out for home-confumption, the importer not being obliged to advance the tax till he had an opportunity of felling his goods, either to fome dealer, or to fome confumer, he could always afford to fell them cheaper than if he had been

VOL. II.

3 T

505

CHAP.

506

BOOK been obliged to advance it at the moment of importation. Under the fame taxes, the foreign trade of confumption even in the taxed commodities, might in this manner be carried on with much more advantage than it can at prefent.

> IT was the object of the famous excife fcheme of Sir Robert Walpole to eftablifh, with regard to wine and tobacco, a fyftem not very unlike that which is here propofed. But though the bill which was then brought into parliament, comprehended thofe two commodities only; it was generally fuppofed to be meant as an introduction to a more extensive fcheme of the fame kind. Faction, combined with the interest of fmuggling merchants, raifed fo violent, though fo unjust, a clamour against that bill, that the minister thought proper to drop it; and from a dread of exciting a clamour of the fame kind, none of his fuccessfors have dared to refume the project.

> THE duties upon foreign luxuries imported for home-confumption, though they fometimes fall upon the poor, fall principally upon people of middling or more than middling fortune. Such are, for example, the duties upon foreign wines, upon coffee, chocolate, tea, fugar, &c.

> THE duties upon the cheaper luxuries of home-produce defined for home-confumption, fall pretty equally upon people of all ranks in proportion to their refpective expense. The poor pay the duties upon malt, hops, beer, and ale, upon their own confumption: The rich, upon both their own confumption and that of their fervants.

> THE whole confumption of the inferior ranks of people, or of those below the middling rank, it must be observed, is in every country

country much greater, not only in quantity, but in value, than that of the middling and of those above the middling rank. The whole expence of the inferior is much greater than that of the superior ranks. In the first place, almost the whole capital of every country is annually diffributed among the inferior ranks of people, as the wages of productive labour. Secondly, a great part of the revenue arifing from both the rent of land and the profits of flock, is annually diffributed among the fame rank, in the wages and maintenance of menial fervants, and other unproductive labourers. Thirdly, fome part of the profits of flock belongs to the fame rank, as a revenue arifing from the employment of their fmall capitals. The amount of the profits annually made by fmall fhopkeepers, tradefmen, and retailers of all kinds, is every where very confiderable, and makes a very confiderable portion of the annual produce. Fourthly, and laftly, fome part even of the rent of land belongs to the fame rank; a confiderable part to those who are fomewhat below the middling rank, and a fmall part even to the lowest rank; common labourers fometimes poffeffing in property an acre or two of land. Though the expence of those inferior ranks of people, therefore, taking them individually, is very finall, yet the whole mais of it, taking them collectively, amounts always to by much the largest portion of the whole expence of the fociety; what remains, of the annual produce of the land and labour of the country for the confumption of the fuperior ranks, being always much lefs, not only in quantity but in value. The taxes upon expence, therefore, which fall chiefly upon that of the fuperior ranks of people, upon the fmaller portion of the annual produce, are likely to be much lefs productive than, either those which fall indifferently upon the expence of all ranks, or even those which fall chiefly upon that of the inferior ranks; than either those which fall indifferently upon the whole annual produce, or those which fall chiefly upon the larger portion

3 T 2

507

CHAP.

BOOK tion of it. The excife upon the materials and manufacture of home-made fermented and fpirituous liquors is accordingly, of all the different taxes upon expence, by far the most productive; and this branch of the excife falls very much, perhaps principally, upon the expence of the common people. In the year which ended on the 5th of July, 1775, the groß produce of this branch of the excife amounted to 3,341,8371. 9 s. 9 d.

> IT must always be remembered, however, that it is the luxurious and not the neceffary expence of the inferior ranks of people that ought ever to be taxed. The final payment of any tax upon their neceffary expence would fall altogether upon the fuperior ranks of people; upon the finaller portion of the annual produce, and not upon the greater. Such a tax must in all cases either raife the wages of labour, or leffen the demand for it. It could not raife the wages of labour, without throwing the final payment of the tax upon the fuperior ranks of people. It could not leffen the demand for labour, without leffening the annual produce of the land and labour of the country, the fund from which all taxes. must be finally paid. Whatever might be the state to which a tax of this kind reduced the demand for labour, it must always raife wages higher than they otherwife would be in that flate; and the final payment of this, enhancement of wages must in all cafes. fall upon the fuperior ranks of people.

FERMENTED liquors brewed and fpirituous liquors diffilled, not for fale, but for private ule, are not in Great Britain liable to any duties of excile. This exemption, of which the object is to fave private families from the odious vifit and examination of the tax-gatherer, occasions the burden of those duties to fall frequently much lighter upon the 'rich than upon the poor: It is not, indeed, very common to distil for private use, though it is done

done fometimes. But in the country, many middling and almost CHAP. all rich and great families brew their own beer. Their ftrong beer, therefore, cofts them eight fhillings a barrel lefs than it cofts the common brewer, who must have his profit upon the tax, as well as upon all the other expence which he advances. Such families, therefore, must drink their beer at least nine or ten shillings a barrel cheaper than any liquor of the fame quality can be drunk by the common people, to whom it is every where more convenient to buy. their beer, by little and little, from the brewery or the ale-houfe. Malt, in the fame manner, that is made for the use of a private. family, is not liable to the vifit or examination of the tax-gatherer : but in this cafe the family must compound at feven shillings and fixpence a head for the tax. Seven shillings and fixpence are equal to the excife upon ten bushels of malt; a quantity fully equal to what all the different members of any fober family, men, women, and children, are at an average likely to confume. But in rich and great families, where country hospitality is much practifed, the malt liquors confumed by the members of the family make but a fmall part of the confumption of the house. Either on account of this compofition, however, or for other reasons, it is not near to common to malt as to brew for private use. It is difficult to imagine any equitable reason why those who either brew or diffil for private use, fhould not be fubject to a composition of the fame kind.

A GREATER revenue than what is at prefent drawn from all the heavy taxes upon malt, beer, and ale, might be raifed, it has frequently been faid, by a much lighter tax upon malt; the opportu-nities of defrauding the revenue being much greater in a brewery than in a malt-houfe; and those who brew for private use being exempted from all duties or composition for duties, which is not the cafe with those who malt for private use.

509

12

IN.

воок

510

In the porter brewery of London, a quarter of malt is commonly brewed into more than two barrels and a half, fometimes into three barrels of porter. The different taxes upon malt amount to fix fhillings a quarter; those upon strong beer and ale to eight shillings a barrel. In the porter brewery therefore, the different taxes upon malt, beer and ale, amount to between twenty-fix and thirty fhillings upon the produce of a quarter of malt. In the country brewery for common country fale, a quarter of malt is feldom brewed into lefs than two barrels of ftrong and one barrel of finall beer; frequently into two barrels and a half of firong beer. The different taxes upon finall beer amount to one shilling and four-pence a barrel. In the country brewery, therefore, the different taxes upon malt, beer, and ale, feldom amount to lefs than twenty-three fhillings and four-pence, frequently to twenty-fix shillings, upon the produce of a quarter of malt. Taking the whole kingdom at an average, therefore, the whole amount of the duties upon malt, beer, and ale, cannot be effimated at lefs than twenty-four or twenty-five shillings upon the produce of a quarter of malt. But by taking off all the different duties upon beer and ale, and by tripling the malt-tax, or by raifing it from fix to eighteen shillings upon the quarter of malt, a greater revenue, it is faid, might be raifed by this fingle tax than what is at present drawn from all those heavier taxes.

BOOK UNDER the old malt tax, indeed, is comprehended a tax of four fillings upon the hogfhead of cyder, and another of ten fhillings upon the barrel of mum. In 1774, the tax upon cyder produced only 30831. 6s. 8d. It probably fell fomewhat flort of its ufual amount; all the different taxes upon cyder having that year produced lefs than ordinary. The tax upon mum, though much heavier, is still less productive, on account of the smaller confumption of that liquor. But to balance whatever may be the ordinary amount of those two taxes; there is comprehended under what is called The country excife, first, the old excife of fix shillings and eight-pence upon the hogshead of cyder; fecondly a like tax of fix fhillings and eight-pence upon the hogfhead of verjuice; thirdly, another of eight fhillings and nine-pence upon the hogfhead of vinegar; and, lastly, a fourth tax of eleven-pence upon the gallon of mead or metheglin: The produce of those different taxes will probably much more than counterbalance that of the duties imposed, by what is called The annual malt tax, upon cyder and mum.

> MALT is confumed not only in the brewery of beer and ale, but in the manufacture of low wines and fpirits. If the malt tax was to be raifed to eighteen shillings upon the quarter, it might be neceffary to make fome abatement in the different excifes which are imposed upon those particular forts of low wines and spirits of which malt makes any part of the materials. In what are called Malt fpirits, it makes commonly but a third part of the materials; the other two-thirds being either raw barley, or one-third barley and one-third wheat. In the diffillery of malt fpirits, both the opportunity and the temptation to fmuggle, are much greater than either in a brewery or in a malt-house; the opportunity, on account of the fmaller bulk and greater value of the commodity; and the temptation, on account of the fuperior 1 height

height of the duties, which amount to 2 s. 6 d. upon the gallon of C H A P. fpirits. By increasing the duties upon malt, and reducing those upon the diffillery, both the opportunities and the temptation to fmuggle would be diminished, which might occasion a still further augmentation of revenue.

IT has for fome time paft been the policy of Great Britain to difcourage the confumption of fpirituous liquors, on account of their fuppofed tendency to ruin the health and to corrupt the morals of the common people. According to this policy, the abatement of the taxes upon the diffillery ought not to be fo great as to reduce in any refpect the price of those liquors. Spirituous liquors might remain as dear as ever; while at the fame time the wholefome and invigorating liquors of beer and ale might be confiderably reduced in their price. The people might thus be in part relieved from one of the burdens of which they at prefent complain the most; while at the fame time the revenue might be confiderably augmented.

THE objections of Dr. Davenant to this alteration in the prefent fyftem of excife duties, feem to be without foundation. Those objections are, that the tax, inflead of dividing itfelf as at prefent pretty equally upon the profit of the maltfter, upon that of the brewer, and upon that of the retailer, would, fo far as it affected profit, fall altogether upon that of the maltfter; that the maltfter could not fo eafily get back the amount of the tax in the advanced price of his malt, as the brewer and retailer in the advanced price of their liquor; and that fo heavy a tax upon malt might reduce the rent and profit of barley land.

No tax can ever reduce, for any confiderable time, the rate of profit in any particular trade, which must always keep its level Vol. II. <u>3</u> U with

with other trades in the neighbourhood. The prefent duties upon malt, beer and ale, do not affect the profits of the dealers in those commodities, who all get back the tax with an additional profit, in the enhanced price of their goods. A tax indeed may render the goods upon which it is imposed fo dear as to diminish the confumption of them. But the confumption of malt is' in malt liquors; and a tax of eighteen support the quarter of malt could not well render those liquors dearer, than the different taxes amounting to twenty-four or twenty-five shillings, do at prefent. Those liquors, on the contrary, would probably become cheaper, and the confumption of them would be more likely to increase than to diminish.

IT is not very easy to understand why it should be more difficult for the maltster to get back eighteen shillings in the advanced price of his malt, than it is at prefent for the brewer to get back twentyfour or twenty-five, fometimes thirty shillings, in that of his liquor. The maltster, indeed, instead of a tax of fix shillings, would be obliged to advance one of eighteen shillings upon every quarter of malt. But the brewer is at present obliged to advance a tax of twenty-four or twenty-five, fometimes thirty shillings, upon every quarter of malt which he brews. It could not be more inconvenient for the maltster to advance a lighter tax, than it is at prefent for the brewer to advance a heavier one. The maltster doth not always keep in his granaries a flock of malt which it will require a longer time to dispose of, than the flock of beer and ale which the brewer frequently keeps in his cellars. The former, therefore, may frequently get the returns of his money as foon as the latter. But whatever inconveniency might arife to the maltfler from being obliged to advance a heavier tax, it could eafily be remedied by granting him a few months longer credit than is at prefent commonlygiven to the brewer,

NOTHING

514

BOOK

NOTHING could reduce the rent and profit of barley land which CHAP. did not reduce the demand for barley. But a change of fystem, which reduced the duties upon a quarter of malt brewed into beer and ale from twenty-four and twenty-five shillings to eighteen shillings, would be more likely to increase than diminish that demand. The rent and profit of barley land, befides, must always be nearly equal to those of other equally fertile and equally well cultivated land. If they were lefs, fome part of the barley land would foon be turned to fome other purpole; and if they were greater, more land would foon be turned to the raifing of barley. When the ordinary price of any particular produce of land is at what may be called a monopoly price, a tax upon it neceffarily reduces the rent and profit of the land which grows it. A tax upon the produce of those precious vineyards, of which the wine falls fo much short of the effectual demand, that its price is always above the natural proportion to that of the produce of other equally fertile and equally well cultivated land, would neceffarily reduce the rent and profit of those vineyards. The price of the wines, being already the higheft that could be got for the quantity commonly fent to market, it could not be raifed higher without diminishing that quantity; and the quantity could not be diminished without still greater loss, because the lands could not be turned to any other equally valuable produce. The whole weight of the tax, therefore, would fall upon the rent and profit; properly upon the rent of the vineyard. When it has been proposed to lay any new tax upon fugar, our fugar planters have frequently complained that the whole weight of fuch taxes fell, not upon the confumer, but upon the producer; they never having been able to raife the price of their fugar after the tax, higher than it was before. The price had, it feems, before the tax been a monopoly price; and the argument adduced to shew that sugar was an improper subject of taxation, demonstrated, perhaps, that it was a proper one; the gains of monopolists, whenever they can be come at, being certainly 3 U 2

515

II.

BOOK tainly of all fubjects the moft proper. But the ordinary price of barley has never been a monopoly price; and the rent and profit of barley land have never been above their natural proportion to those of other equally fertile and equally well cultivated land. The different taxes which have been imposed upon malt, beer, and ale, have never lowered the price of barley, have never reduced the rent and profit of barley land. The price of malt to the brewer has constantly rifen in proportion to the taxes imposed upon it; and those taxes, together with the different duties upon beer and ale, have constantly either raifed the price, or what comes to the fame thing, reduced the quality of those commodities to the consumer. The final payment of those taxes has fallen constantly upon the consumer, and not upon the producer.

> THE only people likely to fuffer by the change of fyftem here propofed, are thole who brew for their own private ufe. But the exemption, which this fuperior rank of people at prefent enjoy, from very heavy taxes which are paid by the poor labourer and artificer, is furely most unjust and unequal, and ought to be taken away, even though this change was never to take place. It has probably been the interest of this fuperior order of people, however, which has hitherto prevented a change of fystem that could not well fail both to increase the revenue and to relieve the people.

> BESIDES fuch duties as those of cuftoms and excise above-mentioned, there are feveral others which affect the price of goods more unequally and more indirectly. Of this kind are the duties which in French are called Peages, which in old Saxon times were called duties of Paffage, and which feem to have been originally eftablished for the fame purpose as our turnpike tolls, or the tolls upon our canals and navigable rivers; for the maintenance of the road or of the navigation. Those duties, when applied to fuch purpose, are most

most properly imposed according to the bulk or weight of the goods. As they were originally local and provincial duties, applicable to local and provincial purpofes, the administration of them was in most cases entrusted to the particular town, parish, or lordship, in which they were levied; fuch communities being in fome way or other fuppoled to be accountable for the application. The fovereign, who is altogether unaccountable, has in many countries affumed to himfelf the administration of those duties; and though he has in most cases enhanced very much the duty, he has in many entirely neglected the application. If the turnpike tolls of Great Britain should ever become one of the refources of government, we may learn, by the example of many other nations, what would probably be the confequence. Such tolls are no doubt finally paid by the confumer; but the confumer is not taxed in proportion to his expence when he pays, not according to the value, but according to the bulk or weight of what he confumes. When fuch duties are imposed, not according to the bulk or weight, but according to the fuppofed value of the goods, they become properly a fort of inland cuftoms or excifes, which obstruct very much the most important of all branches of commerce, the interior commerce of the country.

IN fome fmall states duties fimilar to those passage duties are impofed upon goods carried acrofs the territory, either by land or by water, from one foreign country to another. These are in some countries called transit-duties. Some of the little Italian states, which are fituated upon the Po, and the rivers which run into it, derive fome revenue from duties of this kind, which are paid altogether by foreigners, and which, perhaps, are the only duties that one state can impose upon the subjects of another, without obstructing in any respect the industry or commerce of its own. The most important transit-duty in the world is that levied by the king of Denmark upon all merchant thips which pass through the Sound.

SUCHE

518

SUCH taxes upon luxuries as the greater part of the dutics of cuftoms and excife, though they all fall indifferently upon every different species of revenue, and are paid finally, or without any retribution, by whoever confumes the commodities upon which they are imposed, yet they do not always fall equally or proportionably upon the revenue of every individual. As every man's humour regulates the degree of his confumption, every man contributes rather according to his humour than in proportion to his revenue; the profuse contribute more, the parfimonious less, than their proper proportion. During the minority of a man of great fortune, he contributes commonly very little by his confumption towards the fupport of that flate from whole protection he derives a great revenue. Those who live in another country contribute nothing, by their confumption, towards the fupport of the government of that country, in which is fituated the fource of their revenue. If in this latter country there should be no land-tax, nor any confiderable duty upon the transference either of moveable or of immoveable property, as is the cafe in Ireland, fuch absentces may derive a great revenue from the protection of a government to the fupport of which they do not contribute a fingle fhilling. This inequality is likely to be greateft in a country of which the government is in some respects subordinate and dependent upon that of fome other. The people who posses the most extenfive property in the dependent, will in this cafe generally chufe to live in the governing country. Ireland is precifely in this fituation, and we cannot therefore wonder that the propofal of a tax upon absentees should be fo very popular in that country. It might, perhaps, be a little difficult to afcertain either what fort, or what degree of absence would subject a man to be taxed as an absentee, or at what precife time the tax should either begin or end. If you except, however, this very peculiar fituation, any inequality in the contribution of individuals, which can arife from fuch taxes, is

2

much

and the second

much more than compenfated by the very circumftance which occafions that inequality; the circumftance that every man's contribution is altogether voluntary; it being altogether in his power either to confume or not to confume the commodity taxed. Where fuch taxes, therefore, are properly affeffed and upon proper commodities, they are paid with lefs grumbling than any other. When they are advanced by the merchant or manufacturer, the confumer, who finally pays them, foon comes to confound them with the price of the commodities, and almoft forgets that he pays any tax.

SUCH taxes are or may be perfectly certain, or may be affeffed fo as to leave no doubt concerning either what ought to be paid, or when it ought to be paid; concerning either the quantity or the time of payment. Whatever uncertainty there may fometimes be, either in the duties of cuftoms in Great Britain, or in other duties of the fame kind in other countries, it cannot arife from the nature of those duties, but from the inaccurate or unfkilful manner in which the law that imposes them is expressed.

TAXES upon luxuries generally are, and always may be, paid piece-meal, or in proportion as the contributors have occasion to purchase the goods upon which they are imposed. In the time and mode of payment they are, or may be, of all taxes the most convenient. Upon the whole, such taxes, therefore, are, perhaps, as agreeable to the three first of the four general maxims concerning taxation, as any other. They offend in every respect against the fourth.

SUCH taxes, in proportion to what they bring into the public treafury of the flate, always take out or keep out of the pockets of the people more than almost any other taxes. They feem to do this, in all the four different ways in which it is poffible to do it.

FIRST, the levying of fuch taxes, even when imposed in the most judicious manner, requires a great number of custom-house and excise 519

CHAP.

BOOK excife officers, whole falaries and perquifites are a real tax upon the people, which brings nothing into the treasury of the state. This expence, however, it must be acknowledged, is more moderate in Great Britain than in most other countries. In the year which ended on the fifth of July, 1775, the großs produce of the different duties, under the management of the commissioners of excife in England, amounted to 5,507,3081. 18s. 8^t/₊d. which was levied at an expence of little more than five and a half per cent. From this groß produce, however, there must be deducted what was paid away in bounties and drawbacks upon the exportation of excifeable goods, which will reduce the neat produce below five millions. The levying of the falt duty, an excife duty, but under a different management, is much more expensive. The neat revenue of the cuftoms does not amount to two millions and a half, which is levied at an expence of more than ten per cent. in the falaries of officers, and other incidents. But the perquifites of cuftomhouse officers are every where much greater than their falaries; at fome ports more than double or triple those falaries. If the falaries of officers, and other incidents, therefore, amount to more than ten per cent. upon the neat revenue of the cuftoms; the whole expence of levying that revenue may amount, in falaries and perquifites together, to more than twenty or thirty per cent. The officers of excife receive few or no perquifites; and the adminiftration of that branch of the revenue, being of more recent eftablifhment, is in general lefs corrupted than that of the cuftoms, into which length of time has introduced and authorifed many abufes. By charging upon malt the whole revenue which is at present levied by the different duties upon malt and malt liquors, a faving, it is supposed, of more than fifty thousand pounds might be made in the annual expence of the excife. By confining the

* The neat produce of that year, after deducting all expences and allowances, amounted to 4,975,6521. 195. 6d.

duties

duties of cuftoms to a few forts of goods, and by levying thole duties according to the excife laws, a much greater faving might probably be made in the annual expense of the cuftoms.

SECONDLY, fuch taxes neceffarily occasion fome obstruction or discouragement to certain branches of industry. As they always raife the price of the commodity taxed, they fo far difcourage its confumption, and confequently its production. If it is a commodity of home growth or manufacture, lefs labour comes to be employed in raifing and producing it. If it is a foreign commodity of which the tax increases in this manner the price, the commodities of the fame kind which are made at home may thereby. indeed, gain fome advantage in the home market, and a greater quantity of domeftic industry may thereby be turned towards preparing them. But though this rife of price in a foreign commodity may encourage domeftic industry in one particular branch, it neceffarily difcourages that industry in almost every other. The dearer the Birmingham manufacturer buys his foreign wine, the cheaper he neceffarily fells that part of his hardware with which, or, what comes to the fame thing, with the price of which he buys it. That part of his hardware, therefore, becomes of lefs value to him. and he has lefs encouragement to work at it. The dearer the confumers in one country pay for the furplus produce of another, the cheaper they neceffarily fell that part of their own furplus produce with which, or, what comes to the fame thing, with the price of which they buy it. That part of their own furplus produce becomes of lefs value to them, and they have lefs encouragement to increase its quantity. All taxes upon confumable commodities, therefore, tend to reduce the quantity of productive labour below what it otherwife would be, either in preparing the commodities taxed, if they are home commodities; or in preparing those with which they are purchased, if they are foreign commodities. Such taxes too VOL. II. always 3 X

52 77 C H A P. II.

BOOK V.

[521

always alter, more or lefs, the natural direction of national induftry, and turn it into a channel always different from, and generally lefs advantageous than that in which it would have run of its own accord.

THIRDLY, the hope of evading fuch taxes by fmuggling gives: frequent occasion to forfeitures and other penalties, which entirely ruin the fmuggler ; a perfon who, though no doubt highly blameable for violating the laws of his country, is frequently incapable of violating those of natural juffice, and would have been, in every respect, an excellent citizen, had not the laws of his country made that a crime which nature never meant to be fo. In those-corrupted governments where there is at least a general fuspicion of much unneceffary expence, and great mifapplication of the public revenue, the laws which guard it are little refpected. Not many people are ferupulous about fmuggling when, without perjury, they can find any eafy and fafe opportunity of doing fo. To pretend to have any fcruple about buying fmuggled goods; though a manifest encouragement to the violation of the revenue laws, and to the perjury which almost always attends it, would in most countries be regarded as one of those pedantic pieces of hypocrify which, inflead of gaining credit with any body, ferve only to expose the perfon who affects to practife them, to the fufpicion of being a greater knave than most of his neighbours. By this indulgence of the public, the fmuggler is often encouraged to continue a trade which he is thus taught to confider as in fome meafure innocent; and when the feverity of the revenue laws is ready to fall upon him, he is frequently difpofed to defend with violence, what he has been accustomed to regard as his just property. From being at first, perhaps, rather imprudent than criminal, he at last too often becomes one of the hardiest and most determined violators of the laws of fociety. By the ruin of the fmuggler, his capital, which had before been employed in maintaining productive

productive labour, is abforbed either in the revenue of the flate or C H A P. in that of the revenue-officer, and is employed in maintaining unproductive, to the diminution of the general capital of the fociety, and of the uleful industry which it might otherwise have maintained.

FOURTHLY, fuch taxes, by fubiccting at leaft the dealers in the taxed commodities to the frequent vifits and odious examination of the tax gatherers, expose them fometimes, no doubt to fome degrec of oppreffion, and always to much trouble and vexation; and though vexation, as has already been faid, is not firicitly fpeaking expense, it is certainly equivalent to the expence at which every man would be willing to redeem himfelf from it. The laws of excife, though more effectual for the purpole for which they were inflituted, are, in this respect, more vexatious than those of the customs. When a merchant has imported goods subject to certain duties of customs,when he has paid those duties, and lodged the goods in his warehouse, he is not in most cases liable to any further trouble or vexation from the cuftom-house officer. It is otherwise with goods fubject to duties of excife. The dealers have no respite from the continual vifits and examination of the excife officers. The duties of excife are, upon this account, more unpopular than those of the cultoms; and fo are the officers who levy them. Those officers, it is pretended, though in general, perhaps, they do their duty fully as well as those of the customs; yet, as that duty obliges them to be frequently very troublesome to some of their neighbours, commonly contract a certain hardness of character which the others frequently have not. This observation, however, may very probably be the mere fuggestion of fraudulent dealers, whole fmuggling is either prevented or detected by their diligence.

THE inconveniencies, however, which are, perhaps, in fome degree infeparable from taxes upon confumable commodities, fall as

3 X 2

5²3

light

.524

BOOK light upon the people of Great Britain as upon those of any other country of which the government is nearly as expensive. Our flate is not perfect, and might be mended; but it is as good or better than that of most of our neighbours.

> IN confequence of the notion that duties upon confumable goods were taxes upon the profits of merchants, those duties have, in fome countries, been repeated upon every fucceflive fale of the goods. If the profits of the merchant importer or merchant manufacturer were taxed, equality feemed to require that those of all the middle buyers, who intervened between either of them and the confumer, should likewife be taxed. The famous Alcavala of Spain feems to have been established upon this principle. It was at first a tax of ten per cent. afterwards of fourteen per cent. and is at present of only fix per cent. upon the fale of every fort of property, whether moveable. or immoveable; and it is repeated every time the property is fold. * The levying of this tax requires a multitude of revenue officers fufficient to guard the transportation of goods, not only from one province to another, but from one fhop to another. It fubjects, not only the dealers in fome forts of goods, but those in all forts, every farmer, every manufacturer, every merchant and shop-keeper, to the continual vifits and examination of the tax gatherers. Through the greater part of a country in which a tax of this kind is established, nothing can be produced for distant fale. The produce of every part of the country must be proportioned to the confumption of the neighbourhood. It is to the Alcavala, accordingly, that Uftaritz imputes the ruin of the manufactures of Spain. He might have imputed to it likewife the declen--fion of agriculture, it being imposed not only upon manufactures, but upon the rude produce of the land.

IN the kingdom of Naples there is a fimilar tax of three per cent. upon the value of all contracts, and confequently upon that

* Memoires concernant les Droits, &c. tom. i. p. 455.

of

of all contracts of fale. It is both lighter than the Spanish tax, CHAP. , and the greater part of towns and parifhes are allowed to pay a composition in lieu of it. They levy this composition in what manner they pleafe, generally in a way that gives no interruption to the interior commerce of the place. The Neapolitan tax, therefore, is not near fo ruinous as the Spanish one.

THE uniform fystem of taxation, which; with a few exceptions of no great confequence, takes place in all the different parts of the united kingdom of Great Britain, leaves the interior commerce of the country, the inland and coafting trade, almost entirely free. The inland trade is almost perfectly free, and the greater part of goods may be carried from one end of the kingdom to the other, without requiring any permit or let-pass, without being fubject to question. vifit, or examination from the revenue officers. There are a few exceptions, but they are fuch as can give no interruption to any important branch of the inland commerce of the country. Goods carried coastwife, indeed, require certificates or coastcockets. If you except coals, however, the reft are almost all duty-free. This freedom of interior commerce, the effect of the uniformity of the fystem of taxation, is perhaps one of the principal caufes of the profperity of Great Britain; every great country being neceffarily the beft and most extensive market for the greater part of the productions of its own industry. If the fame freedom, in confequence of the fame uniformity, could be extended to Ireland and the plantations, both the grandenr of the flate and the profperity of every part of the empire, would probably be fiill greater than at prefent.

IN France, the different revenue laws which take place in the different provinces, require a multitude of revenue officers to furround, not only the frontiers of the kingdom, but those of almost each particular province, in order either to prevent the

importation

525

BOOK importation of certain goods, or to fubject it to the payment of certain duties, to the no finall interruption of the interior commerce of the country. Some provinces are allowed to compound for the gabelle or falt-tax. Others are exempted from it altogether. Some provinces are exempted from the exclusive fale of tobacco, which the farmers-general enjoy through the greater part of the kingdom. The aids, which correspond to the excise in England, are very different in different provinces. Some provinces are exempted from them, and pay a composition or equivalent. In those in which they take place and are in farm, there are many local duties which do not extend beyond a particular town or diffrict. The Traites, which correspond to our cuftoms, divide the kingdom into three great parts; first, the provinces subject to the tarif of 1664, which are called the provinces of the five great farms, and under which are comprehended Picardy, Normandy, and the greater part of the interior provinces of the kingdom; fecondly, the provinces fubject to the tarif of 1667, which are called the provinces reckoned foreign, and under which are comprehended the greater part of the frontier provinces; and, thirdly, those provinces which are faid to be treated as foreign, or which, becaufe they are allowed a free commerce with foreign countries, are in their commerce with the other provinces of France fubjected to the fame duties as other foreign countries. Thefe are Alface, the three bifhopricks of Metz, Toul, and Verdun, and the three cities of Dunkirk, Bayonne, and Marfeilles. Both in the provinces of the five great farms, (called fo on account of an antient division of the dutics of cuftoms into five great branches, each of which was originally the fubject of a particular farm, though they are now all united into one) and in those which are faid to be reckoned foreign, there are many local duties which do not extend beyond a particular town or diffrict. There are some such even in the provinces

provinces which are faid to be treated as foreign, particularly in the CHAP. city of Marfeilles. It is unneceffary to obferve how much, both the reftraints upon the interior commerce of the country, and the number of the revenue officers must be multiplied, in order to guard the frontiers of those different provinces and diffricts, which are fubject to fuch different systems of taxation.

OVER and above the general reftraints arising from this complicated fystem of revenue laws, the commerce of wine, after corn perhaps the most important production of France, is in the greater part of the provinces fubject to particular reftraints arifing from the favour which has been fhewn to the vineyards of particular provinces and diffricts, above those of others. The provinces most famous for their wines, it will be found, I believe, are those in which the trade in that article is fubject to the fewest restraints of this kind. The extensive market which fuch provinces enjoy, encourages good management both in the cultivation of their vineyards, and in the fubsequent preparation of their wines.

SUCH various and complicated revenue laws are not peculiar to France. The little dutchy of Milan is divided into fix provinces, in each of which there is a different fystem of taxation with regard to feveral different forts of confumable goods. The still smaller territories of the duke of Parma are divided into three or four, each of which has, in the fame manner, a fystem of its own. Under fuch abfurd management, nothing, but the great fertility of the foil and happiness of the climate, could preferve such countries from soon relapsing into the lowest state of poverty and barbarifin.

TAXES upon confumable commodities may either be levied by an administration of which the officers are appointed by government

2

11.

BONK ment an' are immediately accountable to government, of which the revenue must in this cafe vary from year to year, according to the occasional variations in the produce of the tax; or they may be lett in farm for a rent certain, the farmer being allowed to appoint his own officers, who, though obliged to levy the tax in the manner directed by the law, are under his immediate infpection, and are immediately accountable to him. The best and most frugal way of levying a tax can never be by farm. Over and above what is necessary for paying the flipulated rent, the falaries of the officers, and the whole expence of administration, the farmer must always draw from the produce of the tax a certain profit proportioned at least to the advance which he makes, to the rifk which he runs, to the trouble which he is at, and to the knowledge and skill which it requires to manage fo very complicated a concern. Government, by eftablishing an administration under their own immediate infpection, of the fame kind with that which the farmer eftablishes, might at least fave this profit which is almost always exorbitant. To farm any confiderable branch of the public revenue, requires either a great capital or a great credit; circumftances which would alone reftrain the competition for fuch an undertaking to a very fmall number of people. Of the few who have this capital or credit, a still fmaller number have the neceffary knowledge or experience; another circumstance which restrains the competition still further. The very few, who are in condition to become competitors, find it more for their interest to combine together; to become copartners inflead of competitors, and when the farm is fet up to auction to offer no rent, but what is much below the real value. In countries where the public revenues are in farm, the farmers are generally the most opulent people. Their wealth would alone excite the public indignation, and the vanity which almost always accompanies such upstart fortunes, the foolish oftentation with

with which they commonly difplay that wealth, excites that indignation flill more.

THE farmers of the public revenue never find the laws too fevere, which punish any attempt to evade the payment of a tax. They have no bowels for the contributors, who are not their fubjects, and whole univerfal bankruptcy, if it should happen the day after their farm is expired, would not much affect their intereft. In the greateft exigencies of the flate, when the anxiety of the fovereign for the exact payment of his revenue is neceffarily the greatest, they feldom fail to complain that without laws more rigorous than those which actually take place, it will be impoffible for them to pay even the ufual rent. In those moments of public distress their demands cannot be disputed. The revenue laws. therefore, become gradually more and more fevere. The most fanguinary are always to be found in countries where the greater part of the public revenue is in farm. The mildest, in countries where it is levied under the immediate infpection of the fovereign. Even a bad fovereign feels more compation for his people than can ever be expected from the farmers of his revenue. He knows that the permanent grandeur of his family depends upon the profperity of his people, and he will never knowingly ruin that prosperity for the fake of any momentary interest of his own. It is otherwife with the farmers of his revenue, whofe grandeur may frequently be the effect of the ruin, and not of the prosperity of his people.

A TAX is fometimes, not only farmed for a certain rent, but the farmer has, befides, the monopoly of the commodity taxed. In France, the duties upon tobacco and falt are levied in this manner. In fuch cafes the farmer, inftead of one, levies two exorbitant profits upon the people; the profit of the farmer, and the fill more exorbitant one of the monopolift. Tobacco being Vol. II. <u>3</u> Y a luxury,

530

a luxury, every man is allowed to buy or not to buy as he chufes. BOOK But falt being a neceffary, every man is obliged to buy of the farmer a certain quantity of it; becaufe if he did not buy thisquantity of the farmer, he would, it is presumed, buy it of some fmuggler. The taxes upon both commodities are exorbitant. The temptation to fmuggle confequently is to many people irrefiftible, while at the fame time the rigour of the law, and the vigilance of the farmer's officers, render the yielding to that temptation almost certainly ruinous. The fmuggling of falt and tobacco fends every year feveral hundred people to the gallies, befides a very confiderable number whom it fends to the gibbet. Those taxes levied in this manner yield a very confiderable revenue to government. In-1767, the farm of tobacco was let for twenty-two millions five hundred and forty-one thousand two hundred and seventy-eight livres a year. That of falt, for thirty-fix millions four hundred and ninety-two thousand four hundred and four livres. The farm in both cafes was to commence in 1768, and to last for fix years. Those who confider the blood of the people as nothing in comparison with the revenue of the prince; may perhaps approve of this method of levying taxes. Similar taxes and monopolies of falt and tobacco have been established in many other countries; particularly in the Auftrian and Pruffian dominions, and in the greater part of the ftates of Italy.

> IN France, the greater part of the actual revenue of the crowns is derived from eight different fources; the taille, the capitation, the two vingtiemes, the gabelles, the aides, the traites, the domaine, and the farm of tobacco. The five laft are, in the greater part of the provinces, under farm. The three firft are every where levied by an administration under the immediate infpection and direction of government, and it is univerfally acknowledged that, in proportion to what they take out of the pockets of the people, they bring more into the treasury of the prince than the

CHAP. the other five, of which the administration is much more wasteful and expensive.

THE finances of France feem, in their prefent state, to admit of three very obvious reformations. First, by abolishing the taille and the capitation, and by increasing the number of vingtiemes, fo as to produce an additional revenue equal to the amount of those other taxes, the revenue of the crown might be preferved; the expence of collection might be much diminished; the vexation of the inferior ranks of people, which the taille and capitation occasion, might be entirely prevented; and the fuperior ranks might not be more burdened than the greater part of them are at prefent. The vingtieme, I have already observed, is a tax very nearly of the fame kind with what is called the land-tax of England. The burden of the taille, it is acknowledged, falls finally upon the proprietors of land; and as the greater part of the capitation is affeffed upon those who are fubject to the taille at fo much a pound of that other tax, the final payment of the greater part of it must likewise fall upon the same order of people. Though the number of the vingtiemes, therefore, was increafed fo as to produce an additional revenue equal to the amount of both those taxes, the superior ranks of people might not be more burdened than they are at prefent. Many individuals no doubt would; on account of the great inequalities with which the taille is commonly affeffed upon the effates and tenants of different individuals. The interest and opposition of such favoured subjects are the obstacles most likely to prevent this or any other reformation of the fame Secondly, by rendering the gabelle, the aides, the traites, the kind. taxes upon tobacco, all the different cuftoms and excifes, uniform in all the different parts of the kingdom, those taxes might be levied at much lefs'expence, and the interior commerce of the kingdom might be rendered as free as that of England. Thirdly, and lafly, by fub-3 Y 2

jecting

ВООК V.

~

jecting all those taxes to an administration under the immediate infpection and direction of government, the exorbitant profits of the farmers general might be added to the revenue of the state. The opposition arising from the private interest of individuals, is likely to be as effectual for preventing the two last as the state first mentioned scheme of reformation.

THE French fystem of taxation feems, in every respect, inferior to the British. In Great Britain ten millions sterling are annually levied upon less than eight millions of people, without its being possible to fay that any particular order is oppressed. From the collections of the Abbè Expilly, and the observations of the author of the Effay upon the legislation and commerce of corn, it appearsprobable that France, including the provinces of Lorraine and Bar, contains about twenty-three or twenty-four millions of people; three times the number perhaps contained in Great Britain. The foil and climate of France are better than those of Great Britain. The country has been much longer in a flate of improvement and cultivation, and is, upon that account, better flocked with all those things which it requires a long time to raife up and accumulate, fuch as great towns, and convenient and well-built houfes, both in town and country. With these advantages it might be expected that in France a revenue of thirty millions might be levied for the fupport of the flate, with as little inconveniency as a revenue of ten millions is in Great Britain. In 1765 and 1766, the whole revenue paid into the treafury of France, according to the beft, though, I acknowledge, very imperfect accounts which I could get of it, ufually run between 308 and 325 millions of livres; that is, it did not amount to fifteen millions sterling; not the half of what might have been expected, had the people contributed in the fame proportion to their numbers as the people of Great Britain. The people of France, however, it is generally acknowledged, are much more oppreffed

oppreffed by taxes than the people of Great Britain. France, how- C H A P. ever, is certainly the great empire in Europe which, after that of Great Britain, enjoys the mildeft and most indulgent government.

IN Holland the heavy taxes upon the neceffaries of life have ruined, it is faid, their principal manufactures, and are likely to difcourage gradually even their fiftheries and their trade in fhip building. The taxes upon the neceffaries of life are inconfiderable in Great Britain, and no manufacture has hitherto been ruined by them. The Britifh taxes which bear hardeft on manufactures are fome dutiesupon the importation of raw materials, particularly upon that of raw filk. The revenue of the flates general and of the different cities, however, is faid to amount to more than five millions two hundred and fifty thousand pounds flerling; and as the inhabitants of the United Provinces cannot well be fuppofed to amount to more than a third part of those of Great Britain, they must, in proportionto their number, be much more heavily taxed.

AFTER all the proper fubjects of taxation have been exhausted, if the exigencies of the flate flill continue to require new taxes, they must be imposed upon improper ones. The taxes uponthe neceffaries of life, therefore, may be no impeachment of the wildom of that republic, which, in order to acquire and to maintain its independency, has, in fpite of its great frugality, been involved in fuch expensive wars as have obliged it to contract great debts. The fingular countries of Holland and Zealand, befides, require a confiderable expence even to preferve their existence, or to prevent their being fwallowed up by the fea, which must have contributed to increase confiderably the load of taxes in those two provinces. The republican form of government feems to be the principal fupport of the prefent grandeur of Holland. The owners of great capitals, the great mercantile families, have generally either fome direct

534

FOOK direct share, or some indirect influence in the administration of that government. For the fake of the refpect and authority which m they derive from this fituation, they are willing to live in a country where their capital, if they employ it themfelves, will bring them less profit, and if they lend it to another, less interest; and where the very moderate revenue which they can draw from it will purchase less of the necessaries and conveniencies of life than in any other part of Europe. The refidence of fuch wealthy people neceffarily keeps alive, in spite of all disadvantages, a certain degree of industry in the country. Any public calamity which fhould deftroy the republican form of government, which should throw the whole administration into the hands of nobles and of foldiers, which should annihilate altogether the importance of those wealthy merchants, would soon render it difagreeable to them to live in a country where they were no longer likely to be much respected. They would remove both their refidence and their capital to fome other country, and the induftry and commerce of Holland would foon follow the capitals which supported them.

CHAP. III.

Of public Debts.

IN that rude flate of fociety which precedes the extension of commerce and the improvement of manufactures, when those expensive luxuries which commerce and manufactures can alone introduce, are altogether unknown, the perfon who poffeffes a large revenue, I have endeavoured to show in the third book of this inquiry, can fpend or enjoy that revenue in no other way than by maintaining nearly as many people as it can maintain. A large revenue may at all times be faid to confift in the command of a large quantity of the neceffaries of life. In that rude flate of things it is commonly paid in a large quantity of those necessaries, in the materials of plain food and coarfe cloathing, in corn and cattle, in wool and raw hides. When neither commerce nor manufactures furnilh any thing for which the owner can exchange the greater part of those materials which are over and above his own confumption, he can do nothing with the furplus but feed and cloathe nearly as many people as it will feed and cloathe. A hospitality in which there is no luxury, and a liberality in which there is no offentation, occasion, in this fituation of things, the principal expences of the rich and the great. But thefe, I have likewife endeavoured tofhow in the fame book, are expences by which people are not very apt to ruin themfelves. There is not perhaps any felfish pleasure fo frivolous, of which the purfuit has not fometimes ruined even fenfible men. A paffion for cock-fighting has ruined many. But the inftances, I believe, are not very numerous of people who have been ruined by a hospitality or liberality of this kind; though the hospitality of luxury and the liberality of oftentation have ruined many. Among our feudal anceftors, the long time during which eftates 535

CHAP.

536

BOOK eftates used to continue in the same family, sufficiently demonstrates the general disposition of people to live within their income. Though the ruftic hospitality, conftantly exercised by the great landholders, may not, to us in the prefent times, feem confistent with that order, which we are apt to confider as infeparably connected with good occonomy, yet we must certainly allow them to have been at least fo far frugal as not commonly to have fpent their whole income. A part of their wool and raw hides they had generally an opportunity of felling for money. Some part of this money, perhaps, they fpent in purchasing the few objects of vanity and luxury, with which the circumftances of the times could furnish them; but fome part of it they feem commonly to have hoarded. They could not well indeed do any thing elfe but hoard whatever money they faved. To trade was difgraceful to a gentleman, and to lend money at interest, which at that time was confidered as ufury and prohibited by law, would have been still more fo. In those times of violence and diforder, befides, it was convenient to have a hoard of money at hand, that in cafe they fhould be driven from their own home, they might have fomething of known value to carry with them to fome place of fafety. The fame violence, which made it convenient to hoard, made it equally convenient to conceal the hoard. The frequency of treasure-trove, or of treasure found of which no owner was known, fufficiently demonstrates the frequency in those times both of hoarding and of concealing the hoard. Treasure-trove was then confidered as an important branch of the revenue of the fovereign. All the treasure-trove of the kingdom would fcarce perhaps in the prefent times make an important branch of the revenue of a private gentleman of a good eftate.

THE fame difpofition to fave and to hoard prevailed in the fovereign, as well as in the fubjects. Among nations to whom commerce and manufactures are little known, the fovereign, it has 6 already

already been obferved in the fourth book, is in a fituation which naturally difpofes him to the parfimony requifite for accumulation. In that fituation the expence even of a fovereign cannot be directed by that vanity which delights in the gaudy finery of a court. The ignorance of the times affords but few of the trinkets in which that finery confifts. Standing armies are not then neceffary, fo that the expence even of a fovereign, like that of any other great lord, can be employed in fcarce any thing but bounty to his tenants, and hofpitality to his retainers. But bounty and hofpitality very feldom lead to extravagance; though vanity almost always does. All the antient fovereigns of Europe accordingly, it has already been obferved, had treasures. Every Tartar chief in the prefent times is faid to have one.

IN a commercial country abounding with every fort of expensive luxury, the fovereign, in the fame manner as almost all the great proprietors in his dominions, naturally spends a great part of his revenue in purchafing those luxuries. His own and the neighbouring countries fupply him abundantly with all the coftly trinkets which compose the splendid, but infignificant pageantry of a court. For the fake of an inferior pageantry of the fame kind, his nobles difmifs their retainers, make their tenants independent, and become gradually themfelves as infignificant as the greater part of the wealthy burghers in his dominions. The fame frivolous paffions, which influence their conduct, influence his. How can it be supposed that he should be the only rich man in his dominions who is infenfible to pleafures of this kind? If he does not, what he is very likely to do, fpend upon those pleasures fo great a part of his revenue as to debilitate very much the defensive power of the flate, it cannot well be expected that he fhould not fpend upon them all that part of it which is over and above what is neceffary for supporting that defensive power. His ordinary expence be-VOL. II. 3 Z comes

BOOK comes equal to his ordinary revenue, and it is well if it does not frequently exceed it. The amaffing of treasure can no longer be expected, and when extraordinary exigencies require extraordinary expences, he must necessarily call upon his subjects for an extraordinary aid. The prefent and the late king of Pruffia are the only great princes of Europe who, fince the death of Henry IV. of France in 1610, are fupposed to have amaffed any confiderable treasure. The parfimony which leads to accumulation has become almost as rare in republican as in monarcheial governments. The Italian republics, the United Provinces of the Netherlands, are all in debt. The canton of Berne is the fingle republic in Europe which has amaffed any confiderable treasure. The other Swifs republics have not. The tafte for some fort of pageantry, for splendid buildings, at leaft, and other public ornaments, frequently prevails as much in the apparently fober fenate-houfe of a little republic, as in the diffipated court of the greatest king.

> THE want of parfimony in time of peace, impofes the neceffity of contracting debt in time of war. When war comes, there is no money in the treasury but what is necessary for carrying on the ordinary expence of the peace establishment. In war an establishment of three or four times that expence becomes necessary for the defence of the flate, and confequently a revenue three or four times greater than the peace revenue. Supposing that the fovereign should liave, what he fcarce ever has, the immediate means of augmenting his revenue in proportion to the augmentation of his expence, yet fill the produce of the taxes, from which this increase of revenue must be drawn, will not begin to come into the treasury till perhaps ten or twelve months after they are imposed. But the moment in which war begins, or rather the moment in which it appears likely to begin, the army must be augmented, the fleet must be fitted out, the garrifoned towns must be put into a posture of defence; 3 that

that army, that fleet, those garrifoned towns must be furnished with arms, ammunition and provisions. An immediate and great expense must be incurred in that moment of immediate danger, which will not wait for the gradual and flow returns of the new taxes. In this exigency government can have no other refource but in horrowing.

THE fame commercial flate of fociety which, by the operation of moral caufes, brings government in this manner into the neceffity of borrowing, produces in the fubjects both an ability and an inclination to lend. If it commonly brings along with it the neceffity of borrowing, it likewife brings along with it the facility of doing fo.

· A COUNTRY abounding with merchants and manufacturers, neceffarily abounds with a fet of people through whole hands not only their own capitals, but the capitals of all those who either lend them money, or trust them with goods, pass as frequently, or more frequently, than the revenue of a private man, who, without trade or business, lives upon his income, passes The revenue of fuch a man can regularly through his hands. pass through his hands only once in a year. But the whole amount of the capital and credit of a merchant, who deals in a trade of which the returns are very quick, may fometimes pafs through his hands two, three, or four times in a year. A country abounding with merchants and manufacturers, therefore, neceffarily abounds with a fet of people who have it at all times in their power to advance, if they chufe to do fo, a very large fum of money to government. Hence the ability in the fubjects of a commercial flate to lend.

COMMERCE and manufactures can feldom flourish long in any state which does not enjoy a regular administration of justice, in which the people do not feel themselves fecure in the possession of 3 Z 2 their 539

CHAP.

)4⁰

BOOK their property, in which the faith of contracts is not supported by law, and in which the authority of the flate is not fuppofed to be regularly employed in enforcing the payment of debts from all those who are able to pay. Commerce and manufactures, in fhort, can feldom flourish in any flate in which there is not a certain degree of confidence in the justice of government. The fame confidence which disposes great merchants and manufacturers, upon ordinary occasions, to trust their property to the protection of a particular government; difpofes them, upon extraordinary occafions, to truft that government with the use of their property. By lending money to government, they do not even for a moment diminish their ability to carry on their trade and manufactures. On the contrary, they commonly augment it. The neceffities of the flate render government upon most occasions willing to borrow upon terms extremely advantageous to the lender. The fecurity which it grants to the original creditor, is made transferable to any other creditor, and, from the universal confidence in the justice of the flate, generally fells in the market for more than was originally paid for it. The merchant or monied man makes money by lending money to government, and inftead of diminishing, increases his trading capital. He generally confiders it as a favour, therefore, when the adminiftration admits him to a fhare in the first fubscription for a new loan. Hence the inclination or willingness in the subjects of a commercial ftate to lend.

> THE government of fuch a flate is very apt to repofe itfelf upon this ability and willingnefs of its fubjects to lend it their money on extraordinary occasions. It forefees the facility of borrowing, and therefore difpenfes itfelf from the duty of faving.

> IN a rude flate of fociety there are no great mercantile or manufacturing capitals. The individuals who hoard whatever money

money they can fave, and who conceal their hoard, do fo from a CHAP. distrust of the justice of government, from a fear that if it was known that they had a hoard, and where that hoard was to be found, they would quickly be plundered. In fuch a flate of things few people would be able, and nobody would be willing to lend their money to government on extraordinary exigencies. The fovereign feels that he must provide for fuch exigencies by faving, becaufe he forefees the abfolute impossibility of borrowing. This forefight increases still further his natural disposition to fave.

THE progress of the enormous debts which at prefent oppres, and will in the long-run probably ruin all the great nations of Europe, has been pretty uniform. Nations, like private men, have generally begun to borrow upon what may be called perfonal credit, without affigning or mortgaging any particular fund for the payment of the debt; and when this refource has failed them, they have gone on to borrow upon affignments or mortgages of particular funds.

WHAT is called the unfunded debt of Great Britain, is contracted in the former of those two ways. It confists partly in a debt which bears, or is fuppofed to bear, no interest, and which refembles the debts that a private man contracts upon account; and partly in a debt which bears intereft, and which refembles what a private man contracts upon his bill or promiffory note. The debts which are due either for extraordinary fervices, or for fervices either not provided for, or not paid at the time when they are performed ; part of the extraordinaries of the army, navy, and ordnance, the arrears of fubfidies to foreign princes, those of seamens wages, &c. ufually conflitute a debt of the first kind. Navy and exchequer bills, which are iffued fometimes in payment of a part of fuch debts and fometimes for other purpofes, conflitute a debt of the fecond kind ; exchequer

III.

Land

.542

BOOK V. exchequer bills bearing interest from the day on which they are iffued, and navy bills fix months after they are iffued. The bank ~~~ of England, either by voluntarily difcounting those bills at their current value; or by agreeing with government for certain confiderations to circulate Exchequer bills, that is, to receive them at par, paying the interest which happens to be due upon them, keeps up their value and facilitates their circulation, and thereby frequently enables government to contract a very large debt of this kind. In France, where there is no bank, the flate bills (billets d'etat) + have fometimes fold at fixty and feventy per cent. difcount. During the great re-coinage in king William's time, when the bank of England thought proper to put a flop to its usual transactions, exchequer bills and tallies are faid to have fold from twenty-five to fixty per cent. difcount; owing partly, no doubt, to the fuppofed inftability of the new government established by the revolution, but partly too to the want of the fupport of the bank of England.

WHEN this refource is exhausted, and it becomes neceffary, in order to raife money, to affign or mortgage fome particular branch of the public revenue for the payment of the debt, government has upon different occasions done this in two different ways. Sometimes it has made this affignment or mortgage for a flort period of time only, a year, or a few years, for example; and fometimes for perpetuity. In the one case the fund was supposed fufficient to pay, within the limited time, both principal and interest of the money borrowed. In the other it was supposed fufficient to pay the interest only, or a perpetual annuity equivalent to the interest, government being at liberty to redeem at any time this annuity upon paying back the principal fum borrowed. When money was raised in the one way, it was faid to be raised by anticipation; when in the other, by perpetual funding, or, more flortly, by funding.

+ See Examen des Reflexions politiques sur les finances.

In

In Great Britain the annual land and malt taxes are regularly CHAP. anticipated every year, by virtue of a borrowing claufe conftantly inferted into the acts which impose them. The bank of England generally advances at an interest, which fince the revolution has varied from eight to three per cent. the fums for which those taxes are granted, and receives payment as their produce gradually comes in. If there is a deficiency, which there always is, it is provided for in the fupplies of the enfuing year. The only confiderable branch of the public revenue which yet remains unmortgaged is thus regularly spent before it comes in. Like an improvident spendthrift, whole preffing occasions will not allow him to wait for the regular payment of his revenue, the flate is in the conftant practice of borrowing of its own factors and agents, and of paying intereft for the use of its own money.

In the reign of King William, and during a great part of that of queen Anne, before we had become fo familiar as we are now with the practice of perpetual funding, the greater part of the new taxes were imposed but for a short period of time (for four, five, fix, or . feven years only), and a great part of the grants of every year confifted in loans upon anticipations of the produce of those taxes. The produce being frequently infufficient for paying within the limited term the principal and intereft of the money borrowed, deficiencies arofe, to make good which it became neceffary to prolong the term.

IN 1697, by the 8th of William III. c. 20. the deficiencies of feveral taxes were charged upon what was then called the first general mortgage or fund, confifting of a prolongation to the first of August, 1706, of feveral different taxes, which would have expired within a fhorter term, and of which the produce was accumulated into one general fund. The deficiencies charged upon this prolonged term amounted to 5,160,459l. 14s. $9\frac{1}{4}$ d.

543

IN.

IN 1701 those duties with some others were still further prolonged for the like purposes till the first of August, 1710, and were called the second general mortgage or fund. The deficiences charged upon it amounted to 2,055,999l. 7s. $11\frac{1}{2}$ d.

IN 1707, those duties were still further prolonged, as a fund for new loans, to the first of August 1712, and were called the third general mortgage or fund. The sum borrowed upon it was $9^{8}3,254$ l. 118. $9^{\frac{1}{4}}$ d.

IN 1708, those duties were all (except the old fubfidy of tonnage and poundage, of which one moiety only was made a part of this fund, and a duty upon the importation of Scotch linen, which had been taken off by the articles of union) fill further continued, as a fund for new loans, to the first of August, 1714, and were called the fourth general mortgage or fund. The fum borrowed upon it was 925,1761. 9s. $2\frac{1}{4}$ d.

IN 1709, those duties were all (except the old fubfidy of tonnage and poundage, which was now left out of this fund altogether) flill further continued for the fame purpose to the first of August, 1716, and were called the fifth general mortgage or fund. The sum borrowed upon it was 922,0291. 6s. od.

In 1710, those duties were again prolonged to the first of August, 1720, and were called the fixth general mortgage or fund. The fum borrowed upon it was 1,296,5521. 9s. $11\frac{3}{4}$ d.

IN 1711, the fame duties (which at this time were thus fubject to four different anticipations) together with feveral others were continued for ever, and made a fund for paying the intereft of the capital of the South Sea company, which had that year advanced to government, for paying debts and making good deficiences, the fum of 9,177,9671. 158. 4d. the greateft loan which at that time had ever been made.

Before

544

BOOK

BEFORE this period, the principal, fo far as I have been able to obferve, the only taxes which in order to pay the intereft of a debt had been imposed for perpetuity, were those for paying the intereft of the money which had been advanced to government by the Bank and East India company, and of what it was expected would be advanced, but which was never advanced, by a projected land-bank. The bank fund at this time amounted to 3,375,027 l. 17 s. $10\frac{1}{5}$ d. for which was paid an annuity or intereft of 206,501 l. 13 s. 5 d. The East India fund amounted to 3,200,0501 for which was paid an annuity or intereft of 160,000 l.; the bank fund being at fix per cent. the East India fund at five per cent. intereft.

IN 1715, by the first of George I. c. 12. the different taxes which had been mortgaged for paying the bank annuity, together with feveral others which by this act were likewise rendered perpetual, were accumulated into one common fund called The Aggregate Fund, which was charged, not only with the payments of the bank annuity, but with feveral other annuities and burdens of different kinds. This fund was afterwards augmented by the third of George I. c. S. and by the fifth of George I. c. 3. and the different duties which were then added to it were likewise rendered perpetual.

IN 1717, by the third of George I. e. 7. feveral other taxes were rendered perpetual, and accumulated into another common fund, called The General Fund, for the payment of certain annuities, amounting in the whole to 724,8491. 6s. $10\frac{1}{2}$ d.

IN confequence of those different acts, the greater part of the taxes which before had been anticipated only for a short term of years, were rendered perpetual as a fund for paying, not the capital, but the interest only, of the money which had been borrowed upon them by different fuccessive anticipations.

Vol. II.

4 A

HAD

CHAP.

Lung man of

BOOK

HAD money never been raifed but by anticipation, the course of a few years would have liberated the public revenue, without any other attention of government befides that of not overloading the fund by charging it with more debt than it could pay within the limited term, and of not anticipating a fecond time before the expiration of the first anticipation. But the greater part of European governments have been incapable of those attentions. They have frequently overloaded the fund even upon the first anticipation; and when this happened not to be the cafe, they have generally taken care to overload it, by anticipating a fecond and a third time before the expiration of the first anticipation. The fund becoming in this manner altogether infufficient for paying both principal and interest of the money borrowed upon it, it became neceffary to charge it with the interest only, or a perpetual annuity equal to the interest, and fuch unprovident anticipations necesfarily gave birth to the more ruinous practice of perpetual funding. But though this practice necessarily puts off the liberation of the public revenue from a fixed period to one fo indefinite that it is not very likely ever to arrive; yet as a greater fum can in all cafes be raifed by this new practice than by the old one of anticipations, the former, when men have once become familiar with it, has in the great exigencies of the flate been univerfally preferred to the latter. To relieve the present exigency is always the object which principally interefts those immediately concerned in the adminiftration of public affairs. The future liberation of the public revenue, they leave to the care of posterity.

DURING the reign of queen Anne, the market rate of intereft had fallen from fix to five per cent. and in the twelfth year of her reign five per cent. was declared to be the higheft rate which could lawfully be taken for money borrowed upon private fecurity. Soon after the greater part of the temporary taxes of Great Britain had been rendered perpetual, and diffributed into the Aggregate, South Sea, and General Funds, the creditors of the public,

public, like those of private perfons, were induced to accept of C H A P. five per cent. for the interest of their money, which occasioned a faving of one per cent. upon the capital of the greater part of the debts which had been thus funded for perpetuity, or of one-fixth of the greater part of the annuities which were paid out of the three great funds above mentioned. This faving left a confiderable furplus in the produce of the different taxes which had been accumulated into those funds, over and above what was neceffary for paying the annuities which were now charged upon them, and laid the foundation of what has fince been called the Sinking Fund. In 1717, it amounted to $3^23,434$ l. 7s. $7\frac{1}{2}$ d. In 1727, the interest of the greater part of the public debts was ftill further reduced to four per cent; and in 1753 and 1757, to three and a half and three per cent.; which reductions ftill further augmented the finking fund.

A SINKING fund, though inftituted for the payment of old, facilitates very much the contracting of new debts. It is a fublidiary fund always at hand to be mortgaged in aid of any other doubtful fund, upon which money is proposed to be raised in any exigency of the state. Whether the finking fund of Great Britain has been more frequently applied to the one or to the other of those two purposes, will fufficiently appear by and by.

BESIDES those two methods of borrowing, by anticipations and by perpetual funding, there are two other methods, which hold a fort of middle place between them. These are, that of borrowing upon annuities for terms of years, and that of borrowing upon annuities for lives.

DURING the reigns of king William and queen Anne, large fums were frequently borrowed upon annuities for terms of years, which 4 A 2 were

BOOK were fometimes longer and fometimes shorter. In 1693, an act was paffed for borrowing one million upon an annuity of fourteen per cent. or of 140,0001. a year for fixteen years. In 1691, an act was passed for borrowing a million upon annuities for lives, upon terms which in the prefent times would appear very advantageous. But the fubfcription was not filled up. In the following year the deficiency was made good by borrowing upon annuities for lives at fourteen per cent. or at little more than feven years purchafe. In 1695, the perfons who had purchafed those annuities were allowed to exchange them for others of ninety-fix years, upon paying into the Exchequer fixty-three pounds in the hundred; that is, the difference between fourteen per cent. for life, and fourteen per cent. for ninety-fix years, was fold for fixty-three pounds, or for four and a half years purchase. Such was the fupposed inftability of government, that even these terms procured few purchafers. In the reign of queen Anne, money was upon different occasions borrowed both upon annuities for lives, and upon annuities for terms of thirty-two, of eighty-nine, of ninetyeight, and of ninety-nine years. In 1719, the proprietors of the annuities for thirty-two years were induced to accept in lieu of them South-fea flock to the amount of eleven and a half years purchafe of the annuities, together with an additional quantity of flock equal to the arrears which happened then to be due upon them. In 1720, the greater part of the other annuities for terms of years both long and fhort were fubfcribed into the fame fund. The long annuities at that time amounted to 666,8211. 8 s. $3\frac{1}{2}$ d. a year. On the 5th of January, 1775, the remainder of them, or what was not fubscribed at that time, amounted only to 136,4531. 12 s. 8 d.

> DURING the two wars which begun in 1739 and in 1755, little money was borrowed either upon annuities for terms of years, or upon

upon those for lives. An annuity for ninety-eight or ninety-nine CHAP. years, however, is worth nearly as much money as a perpetuity, and fhould, therefore, one might think, be a fund for borrowing nearly as much. But those who, in order to make family fettlements, and to provide for remote futurity, buy into the public ftocks, would not care to purchase into one of which the value was continually diminishing; and fuch people make a very confiderable proportion both of the proprietors and purchasers of flock. An annuity for a long term of years, therefore, though its intrinfic value may be very nearly the fame with that of a perpetual annuity, will not find nearly the fame number of purchafers. The fubfcribers to a new loan, who mean generally to fell their fubfcription as foon as poffible, prefer greatly a perpetual annuity redeemable by parliament, to an irredeemable annuity for a long term of years of only equal amount. The value of the former may be supposed always the fame or very nearly the fame, and it makes, therefore, a more convenient transferable flock than the latter.

DURING the two last mentioned wars, annuities either for terms of years or for lives were feldom granted but as premiums to the fubscribers to a new loan, over and above the redeemable annuity or interest upon the credit of which the loan was supposed to be made. They were granted, not as the proper fund upon which the money was borrowed; but as an additional encouragement to the lender.

ANNUITIES for lives have occasionally been granted in two different ways; either upon separate lives, or upon lots of lives, which in French are called Tontines, from the name of their inventor. When annuities are granted upon feparate lives, the death of every individual annuitant difburthens the public revenue fo far as it was affected by his annuity. When annuities are granted 4

III.

воок

granted upon tontines, the liberation of the public revenue does not commence till the death of all the annuitants comprehended in one lot, which may fometimes confift of twenty or thirty perfons, of whom the furvivors fucceed to the annuities of all those who die before them; the last furvivor fucceeding to the annuities of the whole lot. Upon the fame revenue more money can always be raifed by tontines than by annuities for feparate lives. An annuity, with a right of furvivor hip, is really worth more than an equal annuity for a separate life, and from the confidence which every man naturally has in his own good fortune, the principle upon which is founded the fuccess of all lotteries, fuch an annuity generally fells for fomething more than it is worth. In countries where it is ufual for government to raife money by granting annuities, tontines are upon this account generally preferred to annuities for separate lives. The expedient which will raife most money, is almost always preferred to that which is likely to bring about in the speediest manner the liberation of the public revenue.

IN France a much greater proportion of the public debts confifts in annuities for lives than in England. According to a memoir prefented by the parliament of Bourdeaux to the king in 1764, the whole public debt of France is effimated at twentyfour hundred millions of livres; of which the capital for which annuities for lives had been granted, is fuppofed to amount to three hundred millions, the eighth-part of the whole public The annuities themselves are computed to amount to debt. thirty millions a year, the fourth part of one hundred and twenty millions, the fupposed interest of that whole debt. These estimations, I know very well, are not exact, but having been prefented by fo very refpectable a body as approximations to the truth, they may, I apprehend, be confidered as fuch. It is not the different degrees of anxiety in the two governments of France and

and England for the liberation of the public revenue, which occafions this difference in their refpective modes of borrowing. It arifes altogether from the different views and interefts of the lenders.

IN England, the feat of government being in the greateft mercantile city in the world, the merchants are generally the people who advance money to government. By advancing it they do not mean to diminish, but, on the contrary, to increase their mercantile capitals; and unlefs they expected to fell with fome profit their fhare in the fubfcription for a new loan, they never would fubscribe. But if by advancing their money they were to purchase, inftead of perpetual annuities, annuities for lives only, whether their own or those of other people, they would not always be fo likely to fell them with a profit. Annuities upon their own lives they would always fell with lofs; becaufe no man will give for an annuity upon the life of another, whole age and flate of health are nearly the fame with his own, the fame price which he would give for one upon his own. An annuity upon the life of a third perfon, indeed, is, no doubt, of equal value to the buyer and the feller; but its real value begins to diminish from the moment it is granted, and continues to do fo more and more as long as it fubfifts. It can never, therefore, make fo convenient a transferable flock as a perpetual annuity, of which the real value may be fuppofed always the fame, or very nearly the fame.

IN France, the feat of government not being in a great mercantile city, merchants do not make fo great a proportion of the people who advance money to government. The people concerned in the finances, the farmers general, the receivers of the taxes which are not in farm, the court bankers, &c. make the greater part of thofe who advance their money in all public exigencies. Such people are commonly men of mean birth, but of great wealth, and frequently

552

 $\frac{B \circ O \circ K}{V}$ quently of great pride. They are too proud to marry their equals, and women of quality difdain to marry them. They frequently refolve, therefore, to live bachelors, and having neither any families of their own, nor much regard for those of their relations, whom they are not always very fond of acknowledging, they defire only to live in fplendour during their own time, and are not unwilling that their fortune fhould end with themselves. The number of rich people, befides, who are either averse to marry, or whose condition of life renders it either improper or inconvenient for them to do fo, is much greater in France than in England. To fuch people, who have little or no care for posterity, nothing can be more convenient than to exchange their capital for a revenue, which is to last just as long, and no longer than they wish it to do.

THE ordinary expence of the greater part of modern governments in time of peace being equal or nearly equal to their ordinary revenue, when war comes they are both unwilling and unable to increase their revenue in proportion to the increase of their expence. They are unwilling, for fear of offending the people, who, by fo great and fo fudden an increase of taxes, would foon, be difgufted with the war; and they are unable, from not well knowing what taxes would be fufficient to produce the revenue wanted. The facility of borrowing delivers them from the embarraffment which this fear and inability would otherwife occafion. By means of borrowing they are enabled, with a very moderate increase of taxes, to raile, from year to year, money fufficient for carrying on the war, and by the practice of perpetually funding they are enabled, with the smallest possible increase of taxes, to raise annually the largest possible fum of money. In great empires the people who live in the capital, and in the provinces remote from the scene of action, feel, mapy of them fcarce any inconveniency from the war;

war; but enjoy, at their eafe, the amufement of reading in the newspapers the exploits of their own fleets and armics. To them this amufement compenfates the fmall difference between the taxes which they pay on account of the war, and those which they had been accuftomed to pay in time of peace. They are commonly diffatisfied with the return of peace, which puts an end to their amufement, and to a thousand visionary hopes of conquest and national glory, from a longer continuance of the war.

THE return of peace, indeed, feldom relieves them from the greater part of the taxes impofed during the war. These are mortgaged for the interest of the debt, contracted in order to carry it on. If, over and above paying the interest of this debt, and defraying the ordinary expence of government, the old revenue, together with the new taxes, produce fome furplus revenue, it may perhaps be converted into a finking fund for paying off the debt. But, in the first place, this finking fund, even fupposing it should be applied to no other purpose, is generally altogether inadequate for paying, in the course of any period during which it can reasonably be expected that peace should continue, the whole debt contracted during the war; and, in the fecond place, this fund is almost always applied to other purposes.

THE new taxes were imposed for the fole purpose of paying the interest of the money borrowed upon them. If they produce more, it is generally something which was neither intended nor expected, and is therefore feldom very confiderable. Sinking funds have generally arisen, not so much from any surplus of the taxes which was over and above what was necessary for paying the interest or annuity originally charged upon them, as from a subsequent reduction of that interest. That of Holland in 1655, and that of the ecclessary for the interest. Hence the usual infufficiency of some both formed in this manner.

BOOK

 \mathbf{V}_{\cdot}

DARING the most profound peace, various events occur which require an extraordinary expence, and government finds it always more convenient to defray this expence by mifapplying the finking fund than by imposing a new tax. Every new tax is immediately felt more or lefs by the people. It occasions always some murmur, and meets with fome opposition. The more taxes may have been multiplied, the higher they may have been raifed upon every different subject of taxation; the more loudly the people complain of every new tax, the more difficult it becomes too either to find out new subjects of taxation, or to raife much higher the taxes already imposed upon the old. A momentary fuspension of thepayment of debt is not immediately felt by the people, and occafions neither murmur nor complaint. To borrow of the finking fund is always an obvious and eafy expedient for getting out of the present difficulty. The more the public debts may have been accumulated, the more neceffary it may have become to fludy to reduce them, the more dangerous, the more ruinous it may be to mifapply any part of the finking fund; the lefs likely is the public debt to be reduced to any confiderable degree, the more likely, the more certainly is the finking fund to be milapplied towards defraying all the extraordinary expences which occur in time of peace. When a nation is already overburdened with taxes, nothing but the neceffities of a new war, nothing but either the animofity of national vengeance, or the anxiety for national fecurity, can induce the people to fubmit, with tolerable patience, to a new tax. Hence the ufual mifapplication of the finking fund.

IN Great Britain, from the time that we had first recourse to the ruinous expedient of perpetual funding, the reduction of the public debt in time of peace, has never borne any proportion to its accumulation in time of war. It was in the war which began in 1688, and was concluded by the treaty of Ryswick in 1697, that the foundation of the present enormous debt of Great Britain was first laid.

ON

ON the 31ft of December, 1697, the public debts of Great Britain, funded and unfunded, amounted to 21,515,7421. 138. $8\frac{1}{2}$ d. A great part of those debts had been contracted upon fhort anticipations, and some part upon annuities for lives; fo that before the 31ft of December, 1701, in lefs than four years, there had partly been paid off, and partly reverted to the public, the fum of 5,121,0411. 128. $0\frac{3}{4}$ d.; a greater reduction of the public debt than has ever fince been brought about in fo fhort a period of time. The remaining debt, therefore, amounted only to 16,394,7011. 18. $7\frac{1}{4}$ d.

IN the war which began in 1702, and which was concluded by the treaty of Utrecht, the public debts were flill more accumulated. On the 31ft of December, 1714, they amounted to 53,681,0761. 5s. $6\frac{1}{12}$ d. The fubfcription into the South Sea fund of the fhort and long annuities increafed the capital of the public debts, fo that on the 31ft of December, 1722, it amounted to 55,282,9781. 1s. $3\frac{1}{5}$ d. The reduction of the debt began in 1723, and went on fo flowly that, on the 31ft of December, 1739, during feventeen years of profound peace, the whole fum paid off was no more than 8,328,3541. 17 s. $11\frac{3}{12}$ d. the capital of the public debt at that time amounting to 46,954,6231. 3 s. $4\frac{7}{12}$ d.

THE Spanish war, which began in 1739, and the French war which foon followed it, occasioned a further increase of the debt, which, on the 31st of December, 1748, after the war had been concluded by the treaty of Aix la Chapelle, amounted to 78,293,313l. 1s. $10\frac{3}{4}$ d. The most profound peace of seventeen years continuance had taken no more than 8,328,354l. 17s. $11\frac{3}{12}$ d. from it. A war of less than nine years continuance added 31,338,689l. 18s. $6\frac{1}{6}$ d. to it *.

DURING the administration of Mr. Pelham, the interest of the public debt was reduced, or at least measures were taken for reduce-

* See James Postlethwaite's history of the public revenue.

4 B 2

ing

BOOK

ing it, from four to three per cent.; the finking fund was increased, and fome part of the public debt was paid off. In 1755, before the breaking out of the late war, the funded debt of Great Britain amounted to 72,289,6731. On the 5th of January, 1763, at the conclusion of the peace, the funded debt amounted to 122,603,3361. 8s. 2^t/_xd. The unfunded debt has been flated at 13,927,5891. 2s. 2d. But the expence occasioned by the war did not end with the conclusion of the peace; fo that though on the 5th of January, 1764, the funded debt was increased (partly by a new loan, and partly by funding a part of the unfunded debt) to 129,586,7891. 10s. $1 \neq d$. there fill remained (according to the very well informed author of the Confiderations on the trade and finances of Great Britain) an unfunded debt which was brought to account in that and the following year, of 9,975,017 l. 12 s. 21 s. d. In 1764, therefore, the public debt of Great Britain, funded and unfunded together, amounted, according to this author, to 139,516,8071. 2s. 4d. The annuities for lives too, which had been granted as premiums to the fubfcribers to the new loans in 1757, estimated at fourteen years purchase, were valued at 472,5001.; and the annuities for long terms of years, granted as premiums likewife, in 1761 and 1762, estimated at 27¹/₂ years purchafe, were valued at 6,826,8751. During a peace of about feven years continuance, the prudent and truly patriot administration of Mr. Pelham, was not able to pay off an old debt of fix millions. During a war of nearly the fame continuance, a new debt of more than feventy-five millions was contracted.

On the 5th of January, 1775, the funded debt of Great Britain amounted to 124,996,0861. 1s. $6\frac{1}{4}$ d. The unfunded, exclusive of a large civil lift debt, to 4,150,2361. 3s. $11\frac{7}{8}$ d. Both together, to 129,146,3221. 5s. 6d. According to this account the whole debt paid off during eleven years profound peace amounted only to 10,415,4741. 16s. $9\frac{7}{8}$ d. Even this fmall

fmall reduction of debt, however, has not been all made from the ^C favings out of the ordinary revenue of the flate. Several extraneous fums, altogether independent of that ordinary revenue, have contributed towards it. Amongft thefe we may reckon an additional fhilling in the pound land tax for three years; the two millions received from the Eaft India company, as indemnification for their territorial acquifitions; and the one hundred and ten thoufand pounds received from the bank for the renewal of their charter. To thefe muft be added feveral other fums which, as they arofe out of the late war, ought perhaps to be confidered as deductions from the expences of it. The principal are,

	1.	S.	d.
The produce of French prizes	690,449	18	9
Composition for French prisoners —	670,000		
What has been received from the fale of the ceded iflands	95,500	0	0

Total, 1,455,949 18 9

If we add to this fum the balance of the earl of Chatham's and Mr. Calcraft's accounts, and other army favings of the fame kind, together with what has been received from the bank, the Eaft India company, and the additional fhilling in the pound, land tax; the whole muft be a good deal more than five millions. The debt, therefore, which fince the peace has been paid out of the favings from the ordinary revenue of the ftate, has not, one year with another, amounted to half a million a year. The finking fund has, no doubt, been confiderably augmented fince the peaceby the debt which has been paid off, by the reduction of the redeemable four per cents. to three per cents. and by the annuities for lives which have fallen in, and, if peace was to continue, g

CHAP.

BOOK V.
a million, perhaps, might now be annually fpared out of it towards the difcharge of the debt. Another million, accordingly, was paid in the courfe of laft year; but, at the fame time, a large civil lift debt was left unpaid, and we are now involved in a new war which, in its progrefs, may prove as expensive as any of our former wars. The new debt which will probably be contracted before the end of the next campaign, may perhaps be nearly equal to all the old debt which has been paid off from the favings out of the ordinary revenue of the flate. It would be altogether chimerical, therefore, to expect that the public debt fhould ever be completely difcharged by any favings which are likely to be made from that ordinary revenue as it flands at prefent.

> THE public funds of the different indebted nations of Europe, particularly those of England, have by one author been reprefented as the accumulation of a great capital fuperadded to the other capital of the country, by means of which its trade is extended, its manufactures multiplied, and its lands cultivated and improved much beyond what they could have been by means of that other capital only. He does not confider that the capital which the first creditors of the public advanced to government, was, from the moment in which they advanced it, a certain portion of the annual produce turned away from ferving in the function of a capital, to ferve in that of a revenue; from maintaining productive labourers to maintain unproductive ones, and to be fpent and wafted, generally in the course of the year, without even the hope of any future reproduction. In return for the capital which they advanced they obtained, indeed, an annuity in the public funds in most cases of more than equal value. This annuity, no doubt, replaced to them their capital, and enabled them to carry on their trade and bufinefs to the fame or perhaps to a greater extent than before; that is, they were enabled either

> > to

to borrow of other people a new capital upon the credit of this annuity, or by felling it to get from other people a new capital of their own, equal or fuperior to that which they had advanced to government. This new capital, however, which they in this manner either bought or borrowed of other people, must have existed inthe country before, and must have been employed, as all capitals are, in maintaining productive labour. When it came into the hands of those who had advanced their money to government, though it was in fome refpects a new capital to them, it was not fo to the country; but was only a capital withdrawn from certain employments in order to be turned towards others. Though it replaced to them what they had advanced to government, it did not replace it to the country. Had they not advanced this capital to government, there would have been in the country two capitals, two portions of the annual produce, inftead of one, employed in maintaining productive labour.

WHEN for defraying the expence of government a revenue is raifed within the year from the produce of free or unmortgaged taxes, a certain portion of the revenue of private people is only turned away from maintaining one fpecies of unproductive labour, towards maintaining another. Some part of what they pay in those taxes might no doubt have been accumulated into capital, and confequently employed in maintaining productive labour; but the greater part would probably have been spent and confequently employed in maintaining unproductive labour. The public expence, however, when defrayed in this manner, no doubt hinders more or lefs the further accumulation of new capital; but it does not necesfarily occasion the defruction of any actually existing capital.

WHEN the public expence is defrayed by funding, it is defrayed by the annual deftruction of fome capital which had before exifted in

СНАР.

BOOK V.

560

in the country; by the perversion of fome portion of the annual produce which had before been defined for the maintenance of productive labour, towards that of unproductive labour. As in this cafe, however, the taxes are lighter than they would have been, had a revenue fufficient for defraying the fame expence been raifed within the year; the private revenue of individuals is neceffarily lefs burdened, and confequently their ability to fave and accumulate fome part of that revenue into capital is a good deal lefs impaired. If the method of funding deftroys more old capital, it at the fame time hinders lefs the accumulation or acquifition of new capital, than that of defraying the public expence by a revenue raifed within the year. Under the fyftem of funding, the frugality and induftry of private people can more eafily repair the breaches which the wafte and extravagance of government may occafionally make in the general capital of the fociety.

IT is only during the continuance of war, however, that the fystem of funding has this advantage over the other fystem. Were the expence of war to be defrayed always by a revenue raifed within the year, the taxes from which that extraordinary revenue was drawn would last no longer than the war. The ability of private people to accumulate, though lefs during the war, would have been greater during the peace than under the fystem of funding. War would not neceffarily have occafioned the deftruction of any old capitals, and peace would have occafioned the accumulation of many more new. Wars would in general be more fpeedily concluded, and lefs wantonly undertaken. The people feeling, during the continuance of the war, the complete burden of it, would foon grow weary of it, and government, in order to humour them, would not be under the necessity of carrying it on longer than it was neceffary to do fo. The forefight of the heavy and unavoidable burdens of war would hinder the people

people from wantonly calling for it when there was no real or C H A P. folid intereft to fight for. The feafons during which the ability of private people to accumulate was fomewhat impaired, would occur more rarely, and be of fhorter continuance. Those on the contrary, during which that ability was in the higheft vigour, would be of much longer duration than they can well be under the fystem of funding.

WHEN funding, befides, has made a certain progrefs, the multiplication of taxes which it brings along with it fometimes impairs as much the ability of private people to accumulate even in time of peace, as the other fyftem would in time of war. The peace revenue of Great Britain amounts at prefent to more than ten millions a year. If free and unmortgaged, it might be fufficient, with proper management and without contracting a fhilling of new debt, to carry on the moft vigorous war. The private revenue of the inhabitants of Great Britain is at prefent as much encumbered in time of peace, their ability to accumulate is as much impaired as it would have been in the time of the moft expensive war, had the pernicious fyftem of funding never been adopted.

In the payment of the intereft of the public debt, it has been faid, it is the right hand which pays the left. The moncy does not go out of the country. It is only a part of the revenue of one fet of the inhabitants which is transferred to another; and the nation is not a farthing the poorer. This apology is founded altogether in the fophiftry of the mercantile fyftem, and after the long examination which I have already beftowed upon that fyftem, it may perhaps be unneceffary to fay any thing further about it. It fuppofes, befides, that the whole public debt is owing to the inhabitants of the country, which happens not to be true; the Dutch, as well as feveral other foreign nations, having a very confiderable Vol. II. 4 C fhare

BOOK fhare in our public funds. But though the whole debt were owing to the inhabitants of the country, it would not upon that account be lefs pernicious.

LAND and capital flock are the two original fources of all revenue both private and public. Capital flock pays the wages of productive labour, whether employed in agriculture, manufactures, or commerce. The management of those two original fources of revenue belongs to two different fetts of people; the proprietors of land, and the owners or employers of capital flock.

THE proprietor of land is interefted for the fake of his own revenue to keep his effate in as good condition as he can, by building and repairing his tenants houfes, by making and maintaining the neceffary drains and enclofures, and all those other expensive improvements which it properly belongs to the landlord to make and maintain. But by different land-taxes the revenue of the landlord may be fo much diministed; and by different duties upon the neceffaries and conveniencies of life, that diministed revenue may be rendered of fo little real value, that he may find himfelf altogether unable to make or maintain those expensive improvements. When the landlord, however, ceases to do his part, it is altogether impoffible that the tenant should continue to do his. As the differes of the landlord increases, the agriculture of the country must neceffarily decline.

WHEN by different taxes upon the neceflaries and conveniencies of life, the owners and employers of capital flock find, that whatever revenue they derive from it, will not, in a particular country, purchafe the fame quantity of those neceflaries and conveniencies, which an equal revenue would in almost any other; they will be disposed to remove to fome other. And when, in order to raife those taxes,

taxes, all or the greater part of merchants and manufacturers, that is, all or the greater part of the employers of great capitals, come to be continually exposed to the mortifying and vexatious vifits of the tax-gatherers; this disposition to remove will foon be changed into an actual removal. The industry of the country will neceffarily fall with the removal of the capital which supported it, and the ruin of trade and manufactures will follow the declension of agriculture.

To transfer from the owners of those two great fources of revenue, land and capital flock, from the perfons immediately interefted in the good condition of every particular portion of land, and in the good management of every particular portion of capital flock, to another fet of perfons (the creditors of the public, who have no fuch particular interest) the greater part of the revenue arising from either, must, in the long-run, occasion both the neglect of land, and the waste or removal of capital stock. A creditor of the public has no doubt a general intereft in the prosperity of the agriculture, manufactures, and commerce of the country; and confequently in the good condition of its lands, and in the good management of its capital ftock. Should there be any general failure or declenfion in any of these things, the produce of the different taxes might no longer be fufficient to pay him the annuity or intereft which is due to him. But a creditor of the public, confidered merely as fuch, has no interest in the good condition of any particular portion of land, or in the good management of any particular portion of capital flock. As a creditor of the public he has no knowledge of any fuch particular . portion. He has no infpection of it. He can have no care about it. Its ruin may in fome cafes be unknown to him, and cannot directly affect him.

The practice of funding has gradually enfectled every flate which has adopted it. The Italian republics feem to have begun it. 4 C 2 Genoa 563

CHAP.

III.

Genoa and Venice, the only two remaining which can pretend to an independent exiftence, have both been enfecbled by it. Spain feems to have learned the practice from the Italian republics, and (its taxes being probably lefs judicious than theirs) it has, in proportion to its natural firength, been fiill more enfecbled. The debts of Spain are of very old flanding. It was deeply in debt before the end of the fixteenth century, about a hundred years before England owed a fhilling. France, notwithflanding all its natural refources, languifhes under an oppreffive load of the fame kind. The republic of the United Provinces is as much enfecbled by its debts as either Genoa or Venice. Is it likely that in Great Britain alone a practice, which has brought either weaknefs or defolation into every other country, fhould prove altogether innocent?

THE fystem of taxation established in those different countries, it may be faid, is inferior to that of England. I believe it is fo. But it ought to be remembered, that when the wifeft government has exhausted all the proper subjects of taxation, it must, in cases of urgent neceffity, have recourse to improper ones. The wife republic of Holland has upon fome occasions been obliged to have recourse to taxes as inconvenient as the greater part of those of Spain. Another war begun before any confiderable liberation of the public revenue had been brought about, and growing in its progrefs as expensive as the laft war, may, from irrefiftible necessity, render the British fystem of taxation as oppressive as that of Holland, or even as that of Spain. To the honour of our prefent fystem of taxation, indeed, it has hitherto given so little embarraffment to industry, that, during the course even of the most expenfive wars, the frugality and good conduct of individuals feems to have been able, by faving and accumulation, to repair all the breaches which the wafte and extravagance of government had made

56.4

BOOK

made in the general capital of the fociety. At the conclusion of CHAP. the late war, the most expensive that Great Britain ever waged, her agriculture was as flourishing, her manufacturers as numerous and as fully employed, and her commerce as extensive, as they had The capital, therefore, which fupported all ever been before. those different branches of industry, must have been equal to what it had ever been before. Since the peace, agriculture has been fiill further improved, the rents of houfes have rifen in every town and village of the country, a proof of the increasing wealth and revenue of the people; and the annual amount of the greater part of the old taxes, of the principal branches of the excife and cuftoms in particular, has been continually increasing, an equally clear proof of an increasing confumption, and confequently of an increafing produce, which could alone fupport that confumption. Great Britain feems to fupport with eafe, a burden which, half a century ago, nobody believed her capable of fupporting. Let us not, however, upon this account rafily conclude that the is capable of fupporting any burden; nor even be too confident that fhe could fupport, without great diffrefs, a burden a little greater than what has already been laid upon her.

WHEN national debts have once been accumulated to a certain degree, there is fearce, I believe, a fingle inflance of their having been fairly and completely paid. The liberation of the public revenue, if it has ever been brought about at all, has always been brought about by a bankruptcy; fometimes by an avowed one, but always by a real one, though frequently by a pretended payment.

THE raifing of the denomination of the coin has been the most usual expedient by which a real public bankruptcy has been difguised under the appearance of a pretended payment. If a fixpence, for 565. нар.

566

BOOK for example, should either by act of parliament or royal proclamation be raifed to the denomination of a fhilling, and twenty fixpences to that of a pound sterling; the perfon who under the old denomination had borrowed twenty shillings, or near four ounces of filver, would, under the new, pay with twenty fixpences, or with fomething lefs than two ounces. A national debt of about a hundred and twenty-eight millions, nearly the capital of the funded and unfunded debt of Great Britain, might in this manner be paid with about fixty-four millions of our prefent money. It would indeed be a pretended payment only, and the creditors of the public would really be defrauded of ten shillings in the pound of what was due to them. The calamity too would extend much further than to the creditors of the public, and those of every private perfon would fuffer a proportionable lofs; and this without any advantage, but in most cases with a great additional loss, to the creditors of the public. If the creditors of the public indeed were generally much in debt to other people, they might in fome measure compensate their loss by paying their creditors in the same coin in which the public had paid them. But in most countries the creditors of the public are, the greater part of them, wealthy people, who fland more in the relation of creditors than in that of debtors towards the reft of their fellow-citizens. A pretended payment of this kind, therefore, inftead of alleviating, aggravates in most cafes the loss of the creditors of the public; and without any advantage to the public, extends the calamity to a great number of other innocent people. It occasions a general and most pernicious fubversion of the fortunes of private people; enriching in most cases the idle and profuse debtor at the expence of the industrious and frugal creditor, and transporting a great part of the national capital, from the hands which were likely to increase and improve it, to those which are likely to diffipate and deftroy it. When it becomes neceffary for a flate to 3 declare

declare itself bankrupt, in the same manner as when it becomes CHAP. neceffary for an individual to do fo, a fair, open, and avowed bankruptcy is always the measure which is both least dishonourable to the debtor, and least hurtful to the creditor. The honour of a ftate is furely very poorly provided for, when, in order to cover the difgrace of a real bankruptcy, it has recourfe to a juggling trick of this kind, to eafily feen through, and at the fame time to extremely pernicious.

ALMOST all flates, however, antient as well as modern, when reduced to this neceffity, have, upon fome occasions, played this very juggling trick. The Romans, at the end of the first Punic war, reduced the As, the coin or denomination by which they computed the value of all their other coins, from containing twelve ounces of copper to contain only two ounces; that is, they raifed two ounces of copper to a denomination which had always before expressed the value of twelve ounces. The republic was, in this manner, enabled to pay the great debts which it had contracted with the fixth part of what it really owed. So fudden and fo great a bankruptcy, we fhould in the prefent times be apt to imagine, must have occafioned a very violent popular clamour. It does not appear to have occafioned any. The law which enacted it was, like all other laws relating to the coin, introduced and carried through the affembly of the people by a tribune, and was probably a very popular law. In Rome, as in all the other antient republics, the poor people were conftantly in debt to the rich and the great, who, in order to fecure their votes at the annual elections, ufed to lend them money at exorbitant interest, which, being never paid, foon accumulated into a fum too great either for the debtor to pay, or for any body elfe to pay for him. The debtor, for fear of a very fevere execution, was obliged, without any further gratuity, to vote for the candidate whom the creditor recommended. In fpite of all the laws

567

HI.

568

BOOK laws against bribery and corruption, the bounty of the candidates, together with the occafional diffributions of corn, which were ordered by the fenate, were the principal funds from which, during the later times of the Roman republic, the poorer citizens derived their fubfistence. To deliver themselves from this fubjection to their creditors, the poorer citizens were continually calling out either for an entire abolition of debts, or for what they called New Tables; that is, for a law which should entitle them to a complete acquittance, upon paying only a certain proportion of their accumulated debts. The law which reduced the coin of all denominations to a fixth part of its former value, as it enabled them to pay their debts with a fixth part of what they really owed, was equivalent to the most advantageous new tables. In order to fatisfy the people, the rich and the great were, upon feveral different occafions, obliged to confent to laws both for abolishing debts, and for introducing new tables; and they probably were induced to confent to this law, partly for the fame reafon, and partly that by liberating the public revenue, they might reftore vigour to that government of which they themselves had the principal direction. An operation of this kind would at once reduce a debt of a hundred and twenty-eight millions to twenty-one millions three hundred and thirty-three thousand three hundred and thirty-three pounds fix shillings and eight-pence. In the course of the second Punic war the As was still further reduced, first, from two ounces of copper to one ounce; and afterwards from one ounce to half an ounce; that is, to the twenty-fourth part of its original value. By combining the three Roman operations into one, a debt of a hundred and twenty-eight millions of our prefent money, might in this manner be reduced all at once to a debt of five millions three hundred and thirty-three thousand three hundred and thirty-three pounds fix shillings and eight-pence. Even the enormous debt of Great Britain might in this manner foon be paid.

By

By means of fuch expedients the coin of, I believe, all nations has been gradually reduced more and more below its original value, c and the fame nominal fum has been gradually brought to contain a fmaller and a fmaller quantity of filver.

NATIONS have fometimes, for the fame purpole, adulterated the ftandard of their coin; that is, have mixed a greater quantity of alloy in it. If in the pound weight of our filver coin, for example, inftead of eighteen penny weight, according to the prefent ftandard, there was mixed eight ounces of alloy; a pound fterling, or twenty fhillings of fuch coin, would be worth little more than fix fhillings and eight-pence of our prefent money. The quantity of filver contained in fix fhillings and eight-pence of our prefent money, would thus be raifed very nearly to the denomination of a pound fterling. The adulteration of the ftandard has exactly the fame effect with what the French call an augmentation, or a direct raifing of the denomination of the coin.

An augmentation, or a direct raifing of the denomination of the coin, always is, and from its nature muft be, an open and avowed operation. By means of it pieces of a fmaller weight and bulk are called by the fame name which had before been given to pieces of a greater weight and bulk. The adulteration of the ftandard, on the contrary, has generally been a concealed operation. By means of it pieces were iffued from the mint of the fame denominations, and, as nearly as could be contrived, of the fame weight, bulk, and appearance, with pieces which had been current before of much greater value. When king John of France*, in order to pay his debts, adulterated his coin, all the officers of his mint were fworn to fecrefy. Both operations are unjuff. But a fimple augmentation is an injuffice of open violence; whereas an adulteration is an injuffice of treacherous fraud. This latter operation, therefore, as

CHAP.

BOOK foon as it has been difcovered, and it could never be concealed very long, has always excited much greater indignation than the former. The coin after any confiderable augmentation has very feldom been brought back to its former weight; but after the greateft adulterations it has almost always been brought back to its former finenes. It has fearce ever happened that the fury and indignation of the people could otherwise be appealed.

> IN the end of the reign of Henry VIII. and in the beginning of that of Edward VI. the Englifh coin was not only raifed in its denomination, but adulterated in its flandard. The like frauds were practifed in Scotland during the minority of James VI. They have occafionally been practifed in most other countries.

> THAT the public revenue of Great Britain can never be completely liberated, or even that any confiderable progrefs can ever be made towards that liberation, while the furplus of that revenue, or what is over and above defraying the annual expence of the peace eftablifhment, is fo very fmall, it feems altogether in vain to expect. That liberation, it is evident, can never be brought about without either fome very confiderable augmentation of the public revenue, or fome equally confiderable reduction of the public expect.

> A MORE equal land tax, a more equal tax upon the rent of houfes, and fuch alterations in the prefent fyftem of cuftoms and excife as those which have been mentioned in the foregoing chapter, might, perhaps, without increasing the burden of the greater part of the people, but only diffributing the weight of it more equally upon the whole, produce a confiderable augmentation of revenue. The most fanguine projector, however, could fearce flatter himfelf that any augmentation of this kind would be fuch as could give any reasonable hopes, either of liberating the public revenue altogether.

570

gether, or even of making fuch progress towards that liberation in CHAP. time of peace, as either to prevent or to compensate the further accumulation of the public debt in the next war.

By extending the British fystem of taxation to all the different provinces of the empire inhabited by people of either British or European extraction, a much greater augmentation of revenue might be expected. This, however, could fcarce, perhaps, be done, confiftently with the principles of the British constitution, without admitting into the British parliament, or if you will into the states-general of the British Empire, a fair and equal representation of all those different provinces, that of each province bearing the fame proportion to the produce of its taxes, as the representation of Great Britain might bear to the produce of the taxes levied upon Great Britain. The private intereft of many powerful individuals, the confirmed prejudices of great bodies of people feem, indeed, at prefent, to oppofe to fo great a change fuch obstacles as it may be very difficult, perhaps altogether impoffible, to furmount. Without, however, pretending to determine whether fuch a union be practicable or impracticable, it may not, perhaps, be improper, in a fpeculative work of this kind, to confider how far the British fystem of taxation might be applicable to all the different provinces of the empire; what revenue might be expected from it if fo applied, and in what manner a general union of this kind might be likely to affect the happinels and prosperity of the different provinces comprehended within it. Such a speculation can at worst be regarded but as a new Utopia, lefs amufing certainly, but not more ufelefs and chimerical than the old one.

THE land-tax, the stamp duties, and the different duties of customs and excise, constitute the four principal branches of the British taxes.

4 D 2

IRELAND

BOOK

572

IRELAND is certainly as able, and our American and West Indian plantations more able to pay a land-tax than Great Bri-Where the landlord is fubject neither to tithe nor poors tain. rate, he must certainly be more able to pay fuch a tax, than where he is fubject to both those other burdens. The tithe, where there is no modus, and where it is levied in kind, diminishes more what would otherwife be the rent of the landlord, than a land-tax which really amounted to five shillings in the pound. Such a tithe will be found in most cafes to amount to more than a fourth part of the real rent of the land, or of what remains after replacing compleatly the capital of the farmer, together with his reasonable profit. If all modufes and all impropriations were taken away, the complete church tithe of Great Britain and Ireland could not well be effimated at lefs than fix or feven millions. If there was no tithe either in Great Britain or Ireland, the landlords could afford to pay fix or feven millions additional land-tax, without being more burdened than a very great part of them are at prefent. America pays no tithe, and could therefore very well afford to pay a land-tax. The lands in America and the Weft Indies, indeed, are in general not tenanted nor leafed out to farmers. They could not therefore be affeffed according to any rent-roll. But neither were the lands of Great Britain, in the 4th of William and Mary, affeffed according to any rent-roll, but according to a very loofe and inaccurate estimation. The lands in America might be assessed either in the fame manner or according to an equitable valuation in confequence of an accurate furvey, like that which was lately made in the Milanefe, and in the dominions of Auftria, Pruffia, and Sardinia.

STAMP-DUTIES, it is evident, might be levied without any variation in all countries where the forms of law procefs, and the deeds by which property both real and perfonal is transferred, are the fame or nearly the fame.

THE

THE extension of the cultom-house laws of Great Britain to Ireland and the plantations, provided it was accompanied, as in justice it ought to be, with an extension of the freedom of trade, would be in the higheft degree advantageous to both. All the invidious restraints which at present oppress the trade of Ireland, the diftinction between the enumerated and non-enumerated commodities of America, would be entirely at an end. The countries north of Cape Finisterre would be as open to every part of the produce of America, as those fouth of that Cape are to fome parts of that produce at prefent. The trade between all the different parts of the British empire would, in confequence of this uniformity in the cuftom-house laws, be as free as the coafting trade of Great Britain is at prefent. The British empire would thus afford within itself an immense internal market for every part of the produce of all its different provinces. So great an extension of market would foon compenfate both to Ireland and the plantations, all that they could fuffer from the increase of the duties of customs.

THE excife is the only part of the British fystem of taxation, which would require to be varied in any respect according as it was applied to the different provinces of the empire. It might be applied to Ireland without any variation; the produce and confumption of that kingdom being exactly of the fame nature with those of Great Britain. In its application to America and the West Indies, of which the produce and confumption are fo very different from those of Great Britain, fome modification might be neceffary, in the fame manner as in its application to the cyder and beer counties of England.

A FERMENTED liquor, for example, which is called beer, but which, as it is made of melaffes, bears very little refemblance to our beer, makes a confiderable part of the common drink of the people in America. This liquor, as it can be kept only for a few days, 573

CHA?.

III.

574

BOOK days, cannot, like our beer, be prepared and ftored up for fale in great brewerics; but every private family must brew it for their own use, in the fame manner as they cook their victuals. But to subject every private family to the odious visits and examination of the tax-gatherers, in the fame manner as we fubject the keepers of alehoufes and the brewers for public fale, would be altogether inconfistent with liberty. If for the fake of equality it was thought neceffary to lay a tax upon this liquor, it might be taxed by taxing the material of which it is made, either at the place of manufacture, or, if the circumstances of the trade rendered fuch an excife improper, by laying a duty upon its importation into the colony in which it was to be confumed. Befides the duty of one penny a gallon imposed by the British parliament upon the importation of melasses into America; there is a provincial tax of this kind upon their importation into Maffachufets Bay, in fhips belonging to any other colony, of eight-pence the hogfhead; and another upon their importation, from the northern colonics, into South Carolina, of five-pence the gallon. Or if neither of these methods was found convenient, each family might compound for its confumption of this liquor, either according to the number of perfons of which it confifted, in the fame manner as private families compound for the malt-tax in England; or according to the different ages and fexes of those perfons, in the fame manner as feveral different taxes are levied in Holland; or nearly as Sir Matthew Decker propofes that all taxes upon confumable commodities should be levied in England. This mode of taxation, it has already been observed, when applied to objects of a speedy confumption, is not a very convenient one. It might be adopted, however, in cafes where no better could be done.

> SUGAR, rum, and tobacco, are commodities which are no where neceffaries of life, which are become objects of almost univerfal confumption, and which are therefore extremely proper fubjects

jects of taxation. If a union with the colonies was to take place, CHAP. those commodities might be taxed either before they go out of the hands of the manufacturer or grower; or if this mode of taxation did not fuit the circumftances of those perfons, they might be. deposited in public warehouses both at the place of manufacture, and at all the different ports of the empire to which they might afterwards be transported, to remain there, under the joint custody of the owner and the revenue officer, till fuch time as they fhould be delivered out either to the confumer, to the merchant retailer for home-confumption, or to the merchant exporter, the tax not to be advanced till fuch delivery. When delivered out for exportation, to go duty free; upon proper fecurity being given that they fhould really be exported out of the empire. These are perhaps the principal commodities with regard to which a union with the colonies might require fome confiderable change in the prefent system of British taxation.

WHAT might be the amount of the revenue which this fyftem of taxation extended to all the different provinces of the empire might produce, it must, no doubt, be altogether impossible to afcertain with tolerable exactnefs. By means of this fyftem there is annually levied in Great Britain, upon lefs than eight millions of people, more than ten millions of revenue. Ireland contains more than two millions of people, and according to the accounts laid before the congress, the twelve affociated provinces of America contain more than three. These accounts, however, may have been exaggerated, in order, perhaps, either to encourage their own people, or to intimidate those of this country, and we shall fuppofe therefore that our North American and Weft Indian colonies taken together contain no more than three millions; or that the whole British empire, in Europe and America, contains no more than thirteen millions of inhabitants. If upon lefs than eight 575

Ш.

576

BOOK eight millions of inhabitants this fystem of taxation raises a revenue of more than ten millions sterling; it ought upon thirteen millions of inhabitants to raife a revenue of more than fixteen millions two hundred and fifty thousand pounds sterling. From this revenue, fuppoling that this fystem could produce it, must be deducted, the revenue ufually raifed in Ireland and the plantations for defraying the expence of their refpective civil governments. The expence of the civil and military establishment of Ireland, together with the interest of the public debt, amounts, at a medium of the two years which ended March, 1775, to fomething lefs than feven hundred and fifty thousand pounds a year. By a very exact account of the revenue of the principal colonies of America and the Weft Indies, it amounted, before the commencement of the present disturbances, to a hundred and fortyone thousand eight hundred pounds. In this account, however, the revenue of Maryland, of North Carolina, and of all our late acquifitions both upon the continent and in the islands, is omitted, which may perhaps make a difference of thirty or forty thousand pounds. For the fake of even numbers therefore, let us fuppofe that the revenue neceffary for fupporting the civil government of Ireland, and the plantations, may amount to a million. There would remain confequently a revenue of fifteen millions two hundred and fifty thousand pounds, to be applied towards defraying the general expence of the empire, and towards paying the public debt." But if from the present revenue of Great Britain a million could in peaceable times be fpared towards the payment of that debt, fix millions two hundred and fifty thousand pounds could very well be fpared from this improved revenue. This great finking fund too might be augmented every year by the intereft of the debt which had been difcharged the year before, and might in this manner increase so very rapidly, as to be fufficient in a few years to difcharge the whole debt, and thus to reftore compleatly the at prefent debilitated and languishing vigour of the empire.

In

In the meantime the people might be relieved from fome of the moft burdenfome taxes; from those which are imposed either upon the neceffaries of life, or upon the materials of manufacture. The labouring poor would thus be enabled to live better, to work cheaper, and to fend their goods cheaper to market. The cheapness of their' goods would increase the demand for them, and confequently for the labour of those who produced them. This increase in the demand for labour, would both increase the numbers and improve the circumstances of the labouring poor. Their confumption would increase, and together with it the revenue arising from all those articles of their confumption upon which the taxes might be allowed to remain.

THE revenue arifing from this fystem of taxation, however, might not immediately increase in proportion to the number of people who were fubjected to it. Great indulgence would for fome time be due to those provinces of the empire which were thus fubjected to burthens to which they had not before been accustomed, and even when the fame taxes came to be levied every where as exactly as poffible, they would not every where produce a revenue proportioned to the numbers of the people. In a poor country the confumption of the principal commodities subject to the duties of cuftoms and excife is very fmall; and in a thinly inhabited country the opportunities of fmuggling are very great. The confumption of malt liquors among the inferior ranks of people in Scotland is very fmall, and the excife upon malt, beer, and ale, produces lefs there than in England in proportion to the numbers of the people and the rate of the duties, which upon malt is different on account of a supposed difference of quality. In these particular branches of the excife, there is not, I apprehend, much more fmuggling in the one country than in the other. The duties upon the diffillery, and the greater part of the duties of cuftoms,

VOL. II.

4 E

577

C H A P. III.

in

578

BOOK in proportion to the numbers of people in the refpective countries, produce less in Scotland than in England, not only on account of the finaller confumption of the taxed commodities, but of the much greater facility of fmuggling. In Ireland, the inferior ranks of people are still poorer than in Scotland, and many parts of the country are almost as thinly inhabited. In Ireland, therefore, the confumption of the taxed commodities might, in proportion to the number of the people, be still lefs than in Scotland, and the facility of fmuggling nearly the fame. In America and the Weft Indies the white people even of the lowest rank are in much better circumftances than those of the fame rank in England, and their confumption of all the luxuries in which they ufually indulge themfelves is probably much greater. The blacks, indeed, who make the greater part of the inhabitants both of the fouthern colonies upon the continent and of the Weft Indian iflands, as they are in a flate of flavery, are, no doubt, in a worfe condition than the pooreft people either in Scotland or Ireland. We must not, however, upon that account, imagine that they are worfe fed, or that their confumption of articles which might be fubjected to moderate duties, is lefs than that even of the lower ranks of people in England. In order that they may work well, it is the intereft of their mafter that they fhould be fed well and kept in good heart, in the fame manner as it is his intereft that his working cattle should be fo. The blacks accordingly have almost every where their allowance of rum and of melaffes or fpruce beer, in the fame manner as the white fervants; and this allowance would not probably be withdrawn, though those articles should be fubjected to moderate duties. The confumption of the taxed commodities, therefore, in proportion to the number of inhabitants, would probably be as great in America and the West Indies as in any part of the British empire. The opportunities of fmuggling, indeed, would be much greater; America, in proportion to the

8

extent

extent of the country, being much more thinly inhabited than either Scotland or Ireland. If the revenue, however, which is at prefent raifed by the different duties upon malt and malt liquors, was to be levied by a fingle duty upon malt, the opportunity of finuggling in the moft important branch of the excife would be almoft entirely taken away: And if the duties of cuftoms, inftead of being impofed upon almoft all the different articles of importation, were confined to a few of the moft general ufe and confumption, and if the levying of those duties was fubjected to the excise laws, the opportunity of fmuggling, though not fo entirely taken away, would be very much diminished. In confequence of those two, apparently, very fimple and easy alterations, the duties of cuftoms and excise might probably produce a revenue as great in proportion to the confumption of the most thinly inhabited province as they do at prefent in proportion to that of the most populous.

THE Americans, it has been faid, indeed, have no gold or filver money; the interior commerce of the country being carried on by a paper currency, and the gold and filver which occafionally come among them being all fent to Great Britain in return for the commodities which they receive from us. But without gold and filver, it is added, there is no poffibility of paying taxes. We already get all the gold and filver which they have. How is it poffible to draw from them what they have not?

The prefent fcarcity of gold and filver money in America is not the effect of the poverty of that country, or of the inability of the people there to purchase those metals. In a country where the wages of labour are so much higher, and the price of provisions so much lower than in England, the greater part of the people must furely have wherewithal to purchase a greater quantity, if it was either necessary or convenient for them to do so. The scarcity of 4 E 2 those

CIIAP.

IH.

~~

V. V. N

580

those metals, therefore, must be the effect of choice, and not of necessity.

IT is for transacting either domestic or foreign business, that gold and filver money is either necessary or convenient.

THE domestic business of every country, it has been shewn in the fecond book of this inquiry, may, at leaft in peaceable times, be transacted by means of a paper currency, with nearly the fame degree of conveniency as by gold and filver money. It is convenient for the Americans, who could always employ with profit in the improvement of their lands a greater flock than they can eafily get, to fave as much as possible the expence of so costly an instrument of commerce as gold and filver, and rather to employ that part of their furplus produce which would be neceffary for purchasing those metals, in purchasing the inftruments of trade, the materials of clothing, feveral parts of houfhold furniture, and the iron-work neceffary for building and extending their fettlements and plantations; in purchafing, not dead flock, but active and productive flock. The colony governments find it for their interest to supply the people with such a quantity of paper-money as is fully fufficient and generally more than fufficient for transacting their domestic buliness. Some of those governments, that of Pennfylvania particularly, derive a revenue from lending this paper-money to their fubjects at an intereft of fo much per cent. Others, like that of Maffachufett's Bay, advance upon extraordinary emergencies a paper-money of this kind for defraying the public expence, and afterwards, when it fuits the conveniency of the colony, redeem it at the depreciated value to which it gradually falls. In 1749 * that colony paid, in this manner, the greater part of its public debts, with the tenth part of

* See Hutchinson's Hift. of Maffachusett's Bay, Vol. II. Page 436. & feq...

the

the money for which its bills had been granted. It fuits the conveniency of the planters to fave the expence of employing gold and filver money in their domeftic tranfactions; and it fuits the conveniency of the colony governments to fupply them with a medium, which, though attended with fome very confiderable difadvantages, enables them to fave that expence. The redundancy of paper money neceffarily banifhes gold and filver from the domeftic tranfactions of the colonies, for the fame reafon that it has banifhed thofe metals from the greater part of the domeftic tranfactions in Scotland; and in both countries it is not the poverty, but the enterprifing and projecting fpirit of the people, their defire of employing all the flock which they can get as active and productive flocts, which has occafioned this redundancy of paper money.

IN the exterior commerce which the different colonies carry on with Great Britain, gold and filver are more or lefs employed, exactly in proportion as they are more or lefs neceffary. Where those metals are not neceffary, they feldom appear. Where they are neceffary, they are generally found.

IN the commerce between Great Britain and the tobacco colonies, the Britifh goods are generally advanced to the colonifls at a pretty long credit, and are afterwards paid for in tobacco, rated at a certain price. It is more convenient for the colonifls to pay in tobacco than in gold and filver. It would be more convenient for any merchant to pay for the goods which his correspondents had fold to him in fome other fort of goods which he might happen to deal in, than in money. Such a merchant would have no occasion to keep any part of his flock by him unemployed, and in ready money, for answering occasional demands. He could have, at all times, a larger quantity of goods in his shop or warehouse, and he could deal to a greater extent. But it feldom happens to be convenient.

CHAP.

BOOK V.

582

venient for all the correspondents of a merchant to receive payment for the goods which they fell to him, in goods of fome other kind which he happens to deal in. The British merchants who trade to Virginia and Maryland happen to be a particular fet of correspondents, to whom it is more convenient to receive payment for the goods which they fell to those colonies in tobacco than in gold and filver. They expect to make a profit by the fale of the tobacco. They could make none by that of the gold and filver. Gold and filver, therefore, very feldom appear in the commerce between Great Britain and the tobacco colonies. Maryland and Virginia have as little occasion for those metals in their foreign as in their domestic commerce. They are faid, accordingly, to have lefs gold and filver money than any other colonies in America. They are reckoned, however, as thriving, and consequently as rich as any of their neighbours.

In the northern colonies, Pennfylvania, New York, New Jerfey, the four governments of New England, &c. the value of their own produce which they export to Great Britain is not equal to that of the manufactures which they import for their own ufe, and for that of fome of the other colonies to which they are the carriers. A balance, therefore, muft be paid to the mother country in gold and filver, and this balance they generally find.

In the fugar colonies the value of the produce annually exported to Great Britain is much greater than that of all the goods imported from thence. If the fugar and rum annually fent to the mother country were paid for in those colonies, Great Britain would be obliged to fend out every year a very large balance in money, and the trade to the Weit Indies would, by a certain species of politicians, be confidered as extremely difadvantageous. But it fo happens, that many of the principal proprietors of the fugar plantations refide in Great Britain. Their rents are remitted to them in fugar fugar and rum, the produce of their eftates. The fugar and rum ^C H A P. which the Weft India merchants purchafe in those colonies upon their own account, are not equal in value to the goods which they annually fell there. A balance, therefore, must necessfarily be paid to them in gold and filver, and this balance too is generally found.

THE difficulty and irregularity of payment from the different colonies to Great Britain, have not been at all in proportion to the greatness or smallness of the balances which were respectively due from them. Payments have in general been more regular from the northern than from the tobacco colonies, though the former have generally paid a pretty large balance in money, while the latter have either paid no balance, or a much finaller one. The difficulty of getting payment from our different fugar colonies has been greater or lels in proportion, not fo much to the extent of the balances respectively due from them, as to the quantity of uncultivated land which they contained; that is, to the greater or fmaller temptation which the planters have been under of over-trading, or of undertaking the fettlement and plantation of greater quantities of wafte land than fuited the extent of their capitals. The returns from the great island of Jamaica, where there is still much uncultivated land, have, upon this account, been in general more irregular and uncertain than those from the smaller islands of Barbadoes, Antigua, and St. Chriftophers, which have for thefe many years been completely cultivated, and have, upon that account, afforded lefs field for the speculations of the planter. The new acquisitionsof Grenada, Tobago, St. Vincents, and Dominica, have opened a new field for foeculations of this kind; and the returns from those iflands have of late been as irregular and uncertain as those from the great island of Jamaica.

It is not, therefore, the poverty of the colonies which occasionsin the greater part of them, the prefent fearcity of gold and filver money.

BOOK V. Their great demand for active and productive flock money. makes it convenient for them to have as little dead flock as poslible; and disposes them upon that account to content themfelves with a cheaper, though lefs commodious inftrument of commerce than gold and filver. They are thereby enabled to convert the value of that gold and filver into the inftruments of trade, into the materials of cloathing, into houshold furniture, and into the iron work neceffary for building and extending their fettlements and plantations. In those branches of business which cannot be transacted without gold and filver money, it appears that they can always find the neceffary quantity of those metals; and if they frequently do not find it, their failure is generally the effect, not of their neceffary poverty, but of their unneceffary and exceffive enterprize. It is not becaufe they are poor that their payments are irregular and uncertain; but because they are too eager to become exceffively rich. Though all that part of the produce of the colony taxes, which was over and above what was necessary for defraying the expence of their own civil and military eftablishments, were to be remitted to Great Britain in gold and filver, the colonies have abundantly wherewithal to purchase the requisite quantity of those metals. They would in this cafe be obliged, indeed, to exchange a part of their furplus produce, with which they now purchase active and productive flock, for dead flock. In transacting their domestic business they would be obliged to employ a cofly inflead of a cheap inflrument of commerce; and the expence of purchasing this coftly inftrument might damp fomewhat the vivacity and ardour of their exceflive enterprize in the improvement of land. It might not, however, be neceffary to remit any part of the American revenue in gold and filver. It might be remitted in bills drawn upon and accepted by particular merchants or companies in Great Britain, to whom a part of the furplus produce of America had been configned, who would pay into the treafury the American revenue in money, after having themfelves received the

584

the value of it in goods; and the whole bufinefs might frequently CHAP. be tranfacted without exporting a fingle ounce of gold or filver from America.

IT is not contrary to justice that both Ireland and America should contribute towards the discharge of the public debt of Great Britain. That debt has been contracted in fupport of the government established by the revolution, a government to which the protestants of Ireland owe, not only the whole authority which they at prefent enjoy in their own country, but every fecurity which they posses for their liberty, their property, and their religion; a government to which feveral of the colonies of America owe their prefent charters, and confequently their prefent conftitution, and to which all the colonies of America owe the liberty, fecurity, and property which they have ever fince enjoyed. That public debt has been contracted in the defence, not of Great Britain alone, but of all the different provinces of the empire; the immenfe debt contracted in the late war in particular, and a great part of that contracted in the war before, were both properly contracted in defence of America.

By a union with Great Britain, Ireland would gain, befides the freedom of trade, other advantages much more important, and which would much more than compensate any increase of taxes that might accompany that union. By the union with England, the middling and inferior ranks of people in Scotland gained a complete deliverance from the power of an ariftocracy which had always before oppreffed them. By an union with Great Britain the greater part of the people of all ranks in Ireland would gain an equally complete deliverance from a much more oppreffive ariftocracy; an ariftocracy not founded, like that of Scotland, in the natural and respectable diffinctions of birth and fortune; but in the

VOL. II.

4 F

585

ВООК V.

586

the moft odious of all diffinctions, those of religious and political prejudices; diffinctions which, more than any other, animate both the infolence of the oppreffors and the hatred and indignation of the oppreffed, and which commonly render the inhabitants of the fame country more hoftile to one another than those of different countries ever are. Without a union with Great Britain, the inhabitants of Ireland are not likely for many ages to confider themselves as one people.

No oppreffive ariftocracy has ever prevailed in the colonies. Even they, however, would, in point of happiness and tranquility, gain confiderably by a union with Great Britain. It would, at least, deliver them from those rancorous and virulent factions which are infeparable from fmall democracies, and which have fo frequently divided the affections of their people, and diffurbed the tranquillity of their governments, in their form fo nearly democratical. In the cafe of a total feparation from Great Britain, which, unlefs prevented by a union of this kind, feems very likely to take place, those factions would be ten times more virulent than ever. Before the commencement of the prefent diffurbances, the coercive power of the mother-country had always been able to reftrain those factions from breaking out into any thing worfe than grofs brutality and infult. If that coercive power was entirely taken away, they would probably foon break out into open violence and bloodshed. In all great countries which are united under one uniform government, the fpirit of party commonly prevails lefs in the remote provinces, than in the centre of the empire. The diffance of those provinces from the capital, from the principal feat of the great fcramble of faction and ambition, makes them enter lefs into the views of any of the contending parties, and renders them more indifferent and impartial fpectators of the conduct of all. The fpirit of party prevails lefs in Scotland than in England.

In

In the cafe of a union it would probably prevail lefs in Ireland C H A P. than in Scotland, and the colonies would probably foon enjoy a degree of concord and unanimity at prefent unknown in any part of the Britifh empire. Both Ireland and the colonies, indeed, would be fubjected to heavier taxes than any which they at prefent pay. In confequence, however, of a diligent and faithful application of the public revenue towards the difcharge of the national debt, the greater part of those taxes might not be of long continuance, and the public revenue of Great Britain might foon be reduced to what was neceffary for maintaining a moderate peace eftablifhment.

THE territorial acquifitions of the Eaft India company, the undoubted right of the crown, that is, of the flate and people of Great Britain, might be rendered another fource of revenue more abundant, perhaps, than all those already mentioned. Those countries are represented as more fertile, more extensive; and in proportion to their extent, much richer and more populous than Great Britain. In order to draw a great revenue from them, it would not probably be neceffary, to introduce any new fystem of taxation into countries which are already fufficiently and more than fufficiently taxed. It might, perhaps, be more proper to lighten, than to aggravate, the burden of those unfortunate countries, and to endeavour to draw a revenue from them, not by imposing new taxes, but by preventing the embezzlement and misapplication of the greater part of those which they already pay.

IF it fhould be found impracticable for Great Britain to draw any confiderable augmentation of revenue from any of the refources above-mentioned; the only refource which can remain to her is a diminution of her expence. In the mode of collecting, and in that of expending the public revenue; though in both 4 F 2 ther^e

there may be still room for improvement; Great Britain feems to be at least as oeconomical as any of her neighbours. The military establishment which she maintains for her own defence intime of peace, is more moderate than that of any European flate which can pretend to rival her either in wealth or in power. None of those articles, therefore, feem to admit of any confiderable reduction of expence. The expence of the peace eftablishment of the colonies was, before the commencement of the prefent disturbances, very confiderable, and is an expence which may, and if no revenue can be drawn from them, ought certainly to be faved altogether. This conftant expence in time of peace, though very great, is infignificant in comparison with what the defence of the colonies has cost us in time of war. The laft war, which was undertaken altogether on account of the colonics, coft Great Britain, it has already been obferved, upwards of ninety millions. The Spanish war of 1730 was principally undertaken on their account; in which, and in the French war that was the confequence of it, Great Britain spent upwards of forty millions, a great part of which ought juftly to be charged to the colonies. In those two wars the colonies cost Great Britain much more than double the fum which the national debt amounted to before the commencement of the first of them. Had it not been for those wars that debt might, and probably would by this time, have been completely paid; and had it not been for the colonies, the former: of those wars might not, and the latter certainly would not have been undertaken. It was becaufe the colonies were fuppofed to be provinces of the British empire, that this expence was laid out upon them. But countries which contribute neither revenue nor military force towards the support of the empire, cannot be confidered as provinces. They may perhaps be confidered as appendages, as a fort of fplendid and flowy equipage of the empire. But if the empire can no longer support the expence of keeping up this equipage,

page, it ought certainly to lay it down; and if it cannot raife its re- C H A P. venue in proportion to its expence, it ought, at leaft, to accommodate its expence to its revenue. If the colonies, notwithftanding their refufal to fubmit to British taxes, are still to be confidered as provinces of the British empire, their defence in some future war may coft Great Britain as great an expence as it ever has done in any former war. The rulers of Great Britain have, for more than a century paft, amufed the people with the imagination that they poffefied a great empire on the west fide of the Atlantic. This empire, however, has hitherto exifted in imagination only. It has hithertobeen, not an empire, but the project of an empire; not a gold mine, but the project of a gold mine ; a project which has coft, which continues to coft, and which, if purfued in the fame way as it has been. hitherto, is likely to coft immenfe expence, without being likely tobring any profit; for the effects of the monopoly of the colony trade, it has been shewn, are, to the great body of the people, mere loss inflead of profit. It is furely now time that our rulers fhould either realize this golden dream, in which they have been indulging themfelves, perhaps, as well as the people; or, that they fhould awake from it themfelves, and endeavour to awaken the people. If the project cannot be completed, it ought to be given up. If any of the provinces of the British empire cannot be made to contribute towards the fupport of the whole empire, it is furely time that Great Britain should free herfelf from the expence of defending those provinces in time of war, and of fupporting any part of their civil or military establishments in time of peace, and endeavour to accommodate her future views and defigns to the real mediocrity of her circumstances.
